

# Type MLS 125 °C Stainless Flatpack, Ultra-Long Life, Aluminum

## Type MLS 125 °C

The Type MLS extends the super performance of the MLP from a maximum operating temperature of 85 °C to 125 °C. While the MLP is inherently capable of operation at 125 °C, its flat aluminum case can't withstand the higher temperature without inflating from internal pressure. The MLS incorporates a rugged, stainless steel case which assures flatness to beyond 125 °C. The MLS is perfect for hi-rel military systems and applications operating above 85 °C.

### Highlights

- Near-hermetic welded seal
- Stainless-steel case
- 100 years expected operating life
- New 2 inch case size

## Specifications

**Ripple Current Capability** is set by the maximum permissible internal core temperature, 125 °C.

**Air Cooled.** The ripple currents in the ratings tables are for 85 °C case temperatures. For air temperatures without a heatsink use the Ambient Temperature, No Heatsink multipliers.

**Heatsink Cooled.** Temperature rise from the internal hottest spot, the core, to ambient air is:

$$\Delta T = I^2(ESR)(\Theta_{cc} + \Theta_{ca})$$

where  $\Theta_{cc}$  is the thermal resistance from core to case and  $\Theta_{ca}$  from case to ambient. To calculate maximum ripple capability with the MLP attached to a heatsink use the maximum core temperature and the values for  $\Theta_{cc}$ .

As an illustration, suppose you operate an MLS332M060EB1C in 65 °C air and attach it to a commercial heatsink with a free-air thermal resistance of 2.7 °C/W. Use a good thermal grease between the MLS and the heatsink, and the total thermal resistance is 2.7 + 1.8 or 4.5 °C/W. The power which would heat the core to 125 °C is (125-65)/4.5 or 13.3 W. For an ESR of 31 mΩ, 13.3 W equates to a ripple current of 20.7A, however, the wire leads are rated for only 20 A.
