Typical Combined Performance

The previous plots were created from one side of the wideband application circuit, CG2H30070F-AMP2 in order to demonstrate the RF performance of the transistor over a wide frequency band. The application circuit CG2H30070F-AMP2 is designed to combine two CG2H30070F in order to achieve 100W CW from 0.5-3.0 GHz instantaneously. Figure 7 shows the typical RF performance from CG2H30070F-AMP2.

To achieve this performance, couplers from Innovative Power Products were used. The IPP-2256 uses N-type connectors in order to handle the higher output power from this application circuit and lead to the reason for the spacing seen in the SMA connectors in the application amplifier CG2H30070F-AMP2.
