

SY89809AL

3.3V LVPECL/HSTL to HSTL 1:9 High-Performance Clock Driver with LVTTTL Clock Select and Enable

Precision Edge®

General Description

The SY89809AL is a high-performance bus clock driver with nine differential High-Speed Transceiver Logic (HSTL) output pairs. The part is designed for use in low-voltage (3.3V/1.8V) applications, which require a large number of outputs to drive precisely aligned, ultra-low skew signals to their destination. The input is multiplexed from either HSTL or Low-Voltage Positive-Emitter-Coupled Logic (LVPECL) by the CLK_SEL pin. The Output Enable (OE) is synchronous so that the outputs will only be enabled/disabled when they are already in the LOW state. This avoids any chance of generating a runt clock pulse when the device is enabled/disabled as can happen with an asynchronous control.

The SY89809AL features low pin-to-pin skew (15ps typical) and low part-to-part skew (100ps typical). The SY89809AL is available in a single space-saving package, enabling a lower overall cost solution.

Datasheets and support documentation can be found on Micrel's web site at: www.micrel.com.

Features

- 3.3V core supply, 1.8V output supply for reduced power
- LVPECL and HSTL inputs
- Nine differential HSTL (low-voltage swing) output pairs
- HSTL outputs drive 50Ω-to-ground with no offset voltage
- 750MHz maximum clock frequency
- Low part-to-part skew (100ps typical)
- Low pin-to-pin skew (15ps typical)
- Available in 32-pin TQFP

Applications

- High-performance PCs
- Workstations
- Parallel processor-based systems
- Other high-performance computing
- Communications

Pin Configuration

32-Pin TQFP (T32-1)

Pin Description

Pin Number	Pin Name	Type	Pin Function
2, 3	HSTL_CLK, /HSTL_CLK	HSTL Input	Differential clock input selected by CLK_SEL. Can be left floating if not selected. Floating input, if selected, produces a LOW at HSTL_CLK and a HIGH at /HSTL_CLK. HSTL input signal requires external termination 50Ω-to-ground.
5, 6	LVPECL_CLK, /LVPECL_CLK	LVPECL Input	Differential clock input selected by CLK_SEL. Can be left floating if not selected. Floating input, if selected, produces a LOW at LVPECL_CLK and a HIGH at /LVPECL_CLK. Non-inverted input has a 75kΩ pull-down. Inverted input has a 75kΩ pull-down and a 37.5kΩ pull-up.
4	CLK_SEL	LVTTTL Input	Selected HSTL_CLK input when LOW and LVPECL_CLK output when HIGH. 37.5kΩ pull-up.
8	OE	LVTTTL Input	Enable input synchronized internally to prevent glitching of the Q0-Q8 and /Q0-/Q8 outputs. OE high-to-low transition ensures outputs remain disabled during the next clock cycle. OE low-to-high transition enables normal operation of the next input clock. 37.5kΩ pull-up.
31, 29, 27, 23, 21, 19, 15, 13, 11	Q0 – Q8	HSTL Output	Differential clock outputs from HSTL_CLK when CLK_SEL = LOW and from LVPECL outputs when CLK_SEL = HIGH. HSTL outputs must be terminated with 50Ω to GND. Q0-Q8 outputs are static LOW when OE = LOW. Unused output pairs may be left floating.

Notes:

- Outputs loaded with 50Ω to ground. Airflow ≥ 500lfpm.
- The Pin-to-Pin skew is defined as the worst-case difference between any two similar delay paths within a single device operating at the same voltage and temperature.
- The Part-to-Part skew is defined as the absolute worst-case difference between any two delay paths on any two devices operating at the same voltage and temperature.
- V_{PP} is the Input Voltage swing required to maintain AC characteristics listed herein. It represents the input voltage swing for CLK or /CLK.
- OE set-up time is defined with respect to the rising edge of the clock. OE HIGH-to-LOW transition ensures outputs remain disabled during the next clock cycle.

Package Information

- NOTES:**
1. DIMENSIONS ARE IN MM(INCHES).
 2. CONTROLLING DIMENSION: MM.
 3. DIMENSION DOES NOT INCLUDE MOLD FLASH OR PROTRUSIONS, EITHER OF WHICH SHALL NOT EXCEED 0.254 [0.010].
 4. LEAD DIMENSION DOES NOT INCLUDE DAMBAR PROTRUSION.
 5. MAXIMUM AND MINIMUM SPECIFICATIONS ARE INDICATED AS FOLLOWS: MAX/MIN.
 6. THESE DIMENSIONS TO BE DETERMINED AT DATUM PLANE [H].
 7. PACKAGE TOP DIMENSIONS ARE SMALLER THAN BOTTOM DIMENSIONS AND TOP OF PACKAGE WILL NOT OVERHANG BOTTOM OF PACKAGE.

Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
