

## Fixed Code Encoder

### FEATURES

#### Operating

- 2 Programmable 32-bit serial numbers
- 10-bit serial number
- 66-bit transmission code length
- Non-volatile 16-bit counter
- 3.5V -13.3V operation
- 3 inputs, 7 functions available
- Selectable baud rate
- Automatic code word completion
- Battery low signal transmitted to receiver

#### Other

- Pin-out compatible with most KEELOQ® Encoders
- Simple programming interface
- On-chip EEPROM
- On-chip oscillator and timing components
- Button inputs have internal pull-down resistors
- Minimum External Components required

### Typical Applications

The HCS101 is ideal for remote control applications. These applications include:

- Low-end automotive alarm systems
- Low-end automotive immobilizers
- Gate and garage door openers
- Identity tokens
- Low-end burglar alarm systems
- Fan and lighting controls
- Toys

### DESCRIPTION

The HCS101 from Microchip Technology Inc. is a fixed code encoder designed for remote control systems. It provides a small package outline and low cost to make this device a perfect solution for unidirectional remote control systems.

It is also pin compatible with Microchip's HCS201 Code Hopping Encoder allowing easy upgrading to a more secure remote keyless entry (RKE) system.

The 8-pin HCS101 operates over a wide voltage range of 3.5V to 13.3V and has three button inputs allowing the system designer the freedom to utilize up to 7 functions. The only components required for device operation are the buttons and RF circuitry, allowing a very low system cost.

### PACKAGE TYPES

### HCS101 BLOCK DIAGRAM

## 1.0 SYSTEM OVERVIEW

As indicated in the block diagram in Figure 1-1, the HCS101 has a small EEPROM array, which must be loaded with several parameters before use. These parameters include:

- Two 32-bit serial numbers
- 16-bit counter value
- Additional 10-bit serial number
- Configuration data

The EEPROM data for each transmitter is programmed by the manufacturer at the time of production.

Any type of controller may be used as a receiver, but it is typically a microcontroller with compatible firmware that allows the receiver to operate in conjunction with a transmitter, based on the HCS101.

**FIGURE 1-1: BASIC OPERATION OF TRANSMITTER ENCODER**

## 2.0 DEVICE OPERATION

As shown in the typical application circuits in Figure 2-1, the HCS101 is easy to use. It requires only the addition of buttons and RF circuitry for use as the transmitter in your application. A description of each pin is given in Table 2-1.

**FIGURE 2-1: TYPICAL CIRCUITS**

**TABLE 2-1: PIN DESCRIPTIONS**

| Name | Pin Number | Description                                                           |
|------|------------|-----------------------------------------------------------------------|
| S0   | 1          | Switch input 0                                                        |
| S1   | 2          | Switch input 1                                                        |
| S2   | 3          | Switch input 2/Clock pin for Programming mode                         |
| NC   | 4          | No connection                                                         |
| VSS  | 5          | Ground reference connection                                           |
| DATA | 6          | Pulse Width Modulation (PWM) output pin/Data pin for Programming mode |
| NC   | 7          | No connection                                                         |
| VDD  | 8          | Positive supply voltage connection                                    |

The HCS101 will wake-up upon detecting a switch closure and then delay for a debounce delay ( $T_{DB}$ ) as shown in Figure 2-2. The device will then update the 16-bit counter before it loads the transmit register. The data is then transmitted serially on the DATA pin in Pulse Width Modulation (PWM) format.

If additional buttons are pressed during a transmission, the current transmission is terminated. The HCS101 restarts and the new transmission will contain the latest button information. When all buttons are released, the device completes the current code word and then powers down. Released buttons do not terminate and/or restart transmissions.

**FIGURE 2-2: ENCODER OPERATION**

## 3.0 TRANSMITTED WORD

### 3.1 Transmission Format (PWM Mode)

The HCS101 transmission is made up of several code words as shown in Figure 3-1. Each code word starts with a preamble and a header, followed by the data. The code word is followed by a guard period before the next code word begins. The same code word is transmitted as long as the button is pressed. Refer to Table 7-3 for transmission timing requirements.

### 3.2 Code Word Organization

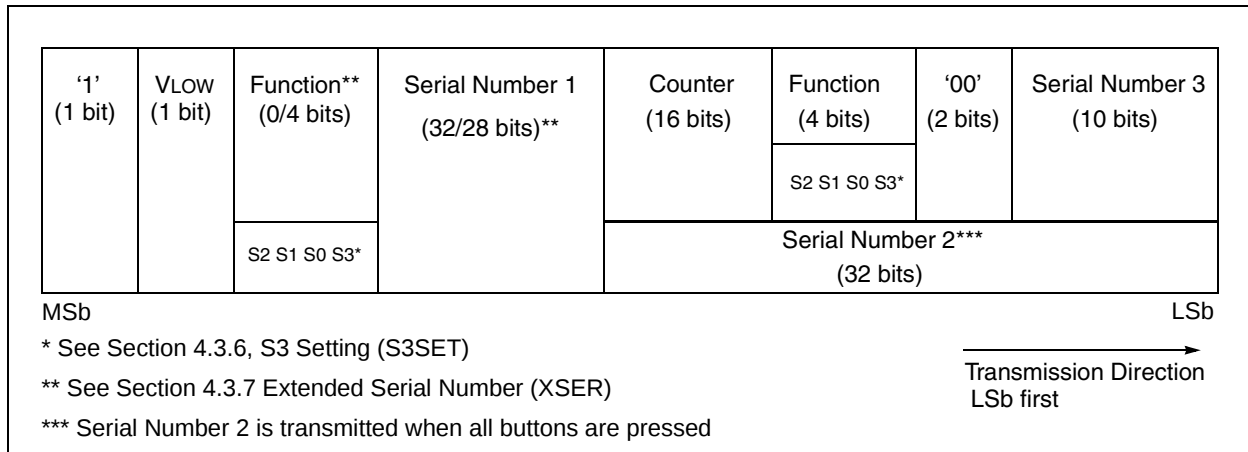

The HCS101 transmits a 66-bit code word. The 66-bit word is constructed from the serial numbers, counter and function information. The code word format is shown in Figure 3-2.

Under normal conditions, serial number 1 is transmitted with the counter and serial number 3. If all the buttons are pressed, serial number 2 is transmitted in place of the counter and serial number 3.

**FIGURE 3-1: CODE WORD TRANSMISSION FORMAT**

**FIGURE 3-2: CODE WORD ORGANIZATION**

## 4.0 EEPROM MEMORY ORGANIZATION

The HCS101 contains 192 bits (12 x 16-bit words) of EEPROM memory as shown in Table 4-1. Further descriptions of the memory array are given in the following sections.

**TABLE 4-1: EEPROM MEMORY MAP**

| WORD ADDRESS | MNEMONIC | DESCRIPTION                              |
|--------------|----------|------------------------------------------|
| 0            | RESERVED | Set to 0000H                             |
| 1            | RESERVED | Set to 0000H                             |
| 2            | RESERVED | Set to 0000H                             |
| 3            | RESERVED | Set to 0000H                             |
| 4            | CNTR     | Counter                                  |
| 5            | RESERVED | Set to 0000H                             |
| 6            | SER_1    | Device Serial Number 1 (word 0) 16 LSb's |
| 7            | SER_1    | Device Serial Number 1 (word 1) 16 MSb's |
| 8            | SER_2    | Device Serial Number 2 (word 0) 16 LSb's |
| 9            | SER_2    | Device Serial Number 2 (word 1) 16 MSb's |
| 10           | SER_3    | Device Serial Number 3                   |
| 11           | CONFIG   | Config Word                              |

### 4.1 CNTR (Counter)

This is the 16-bit gray code counter value that can be used to track the number of times a transmitter has been activated.

### 4.2 SER\_1, SER\_2, SER\_3 (Encoder Serial Number)

SER\_1, and SER\_2 are the 32-bit device serial numbers. SER\_3 is an additional 10-bit serial number transmitted with every transmission. The most significant 6 bits of the 16-bit SER\_3 word are reserved and should be set to zero.

### 4.3 Configuration Word

The configuration word is a 16-bit word stored in the EEPROM array that is used by the device to store the status configuration options. Further explanations of each of the bits are described in the following sections.

**TABLE 4-2: CONFIGURATION WORD**

| Bit Number | Bit Name |
|------------|----------|
| 0          | OSC0     |
| 1          | OSC1     |
| 2          | OSC2     |
| 3          | OSC3     |
| 4          | VLOWS    |
| 5          | BRS      |
| 6          | MTX4     |
| 7          | TXEN     |
| 8          | S3SET    |
| 9          | XSER     |
| 10         | RESERVED |
| 11         | RESERVED |
| 12         | RESERVED |
| 13         | RESERVED |
| 14         | RESERVED |
| 15         | RESERVED |

#### 4.3.1 OSCILLATOR TUNING BITS (OSC0 TO OSC3)

These bits are used to tune the nominal frequency of the HCS101 to within  $\pm 10\%$  of its nominal value over temperature and voltage.

#### 4.3.2 LOW VOLTAGE TRIP POINT SELECT (VLOWS)

The low voltage trip point select bit (VLOWS) and the S3 setting bit (S3SET) are used to determine the voltage level for the low voltage detector.

| VLOWS | S3SET* | Trip Point |
|-------|--------|------------|
| 0     | 0      | 4.4        |
| 0     | 1      | 4.4        |
| 1     | 0      | 9          |
| 1     | 1      | 6.75       |

\* See also Section 4.3.6

#### 4.3.3 BAUDRATE SELECT BITS (BRS)

BRS selects the speed of transmission and the code word blanking. Table 4-3 shows how the bit is used to select the different baud rates and Section 5.2 provides a detailed explanation of code word blanking.

**TABLE 4-3: BAUDRATE SELECT**

| BRS | Basic Pulse Element | Code Words Transmitted |
|-----|---------------------|------------------------|
| 0   | 400 $\mu$ s         | All                    |
| 1   | 200 $\mu$ s         | 1 out of 2             |

## 4.3.4 MINIMUM FOUR TRANSMISSIONS (MTX4)

If this bit is cleared, at least one code word is completed when the HCS101 is activated. If this bit is set, at least four complete code words are transmitted.

## 4.3.5 TRANSMIT PULSE ENABLE (TXEN)

If this bit is cleared, no start pulse occurs before a transmission. If the bit is set, a start pulse (1  $T_E$  long) is transmitted before the first code word's preamble.

## 4.3.6 S3 SETTING (S3SET)

This bit determines the value of S3 in the function code during a transmission and the high trip point selected by  $V_{Lows}$  in Section 4.3.2. If this bit is cleared, S3 mirrors S2 during a transmission. If the S3SET bit is set, S3 in the function code is always set, independent of the value of S2.

## 4.3.7 EXTENDED SERIAL NUMBER (XSER)

If this bit is cleared, the most significant four bits of the 32-bit Serial Number 1 are replaced with the function code. If this bit is set, the full 32-bit Serial Number 1 is transmitted.

## 5.0 SPECIAL FEATURES

### 5.1 Code Word Completion

Code word completion is an automatic feature that ensures the entire code word is transmitted, even if the button is released before the transmission is complete. If the button is held down beyond the time for one code word, multiple code words will result. If another button is activated during a transmission, the active transmission will be aborted and a new transmission will begin using the new button information.

### 5.2 Blank Alternate Code Word

Federal Communications Commission (FCC) Rules, Part 15 specify the limits on fundamental power and harmonics that can be transmitted. Power is calculated on the worst case average power transmitted in a 100 ms window. It is therefore advantageous to minimize the duty cycle of the transmission by minimizing the duty cycle of the individual bits and by blanking out consecutive words. The transmission duty cycle can be lowered by setting BRS. This reduces the average power transmitted and hence, assists in FCC approval of a transmitter device. Shortening the code word length and transmitting only every other code word (Figure 5-1) also may allow a higher amplitude transmission for greater range.

### 5.3 Auto-Shutoff

The auto-shutoff function automatically stops the device from transmitting if a button inadvertently gets pressed for longer than the time-out period,  $T_{TO}$ . This will prevent the device from draining the battery if a button gets pressed while the transmitter is in a pocket or purse.

### 5.4 VLow: Voltage LOW Indicator

The VLow bit is included in every transmission and will be transmitted as a one if the operating voltage has dropped below the low voltage trip point. Refer to Figure 3-2. The trip point is selectable based on the battery voltage being used. See Section 4.3.2 for a description of how the low voltage select option is set.

**FIGURE 5-1: CODE WORD TRANSMISSIONS**

## 6.0 PROGRAMMING THE HCS101

When using the HCS101 in a system, the user will have to program some parameters into the device, including the serial number and the counter, before it can be used. The programming cycle allows the user to input a 192-bit serial data stream which is then stored internally in EEPROM. Programming will be initiated by forcing the DATA line high after the S2 line has been held high for the appropriate length of time. Refer to Table 6-1 and Figure 6-1.

After the Program mode is entered, a delay must be provided to the device for the automatic bulk write cycle to complete. This will write all locations in the EEPROM to all zeros. The device can then be programmed by clocking in 16 bits at a time, using S2 as the clock line and DATA as the data in line. After each 16-bit word is loaded, a programming delay is required for the internal program cycle to complete. This delay can take up to  $T_{WC}$ .

The HCS101 will signal that the write is complete by sending out a train of ACK pulses, TACKH high, TACKL low on DATA. The ACK pulses will continue until S2 is dropped. These times can be used to calculate the oscillator calibration value. The first pulse's width should NOT be used for calibration.

At the end of the programming cycle, the device can be verified as shown in Figure 6-2 by reading back the EEPROM. Reading is done by clocking the S2 line and reading the data bits on the DATA pin. **A verify operation can only be done once, immediately following the program cycle.**

**Note:** To ensure that the device does not accidentally enter Programming mode, DATA should never be pulled high by the circuit connected to it. Special care should be taken when driving PNP RF transistors.

**FIGURE 6-1: PROGRAMMING WAVEFORMS**

**FIGURE 6-2: VERIFY WAVEFORMS**

**TABLE 6-1: PROGRAMMING/VERIFY TIMING REQUIREMENTS**

| VDD = 5.0V ± 10%<br>25° C ± 5°C |        |      |      |                   |

**Note 1:** Typical values are at 25°C.

**2:** No load.

**3:** Auto-shutoff current specification does not include the current through the input pulldown resistors.

**4:** Auto-shutoff current is periodically sampled and not 100% tested.

## ON-LINE SUPPORT

Microchip provides on-line support on the Microchip World Wide Web (WWW) site.

The web site is used by Microchip as a means to make files and information easily available to customers. To view the site, the user must have access to the Internet and a web browser, such as Netscape or Microsoft Explorer. Files are also available for FTP download from our FTP site.

### Connecting to the Microchip Internet Web Site

The Microchip web site is available by using your favorite Internet browser to attach to:

**[www.microchip.com](http://www.microchip.com)**

The file transfer site is available by using an FTP service to connect to:

**<ftp://ftp.microchip.com>**

The web site and file transfer site provide a variety of services. Users may download files for the latest Development Tools, Data Sheets, Application Notes, User's Guides, Articles and Sample Programs. A variety of Microchip specific business information is also available, including listings of Microchip sales offices, distributors and factory representatives. Other data available for consideration is:

- Latest Microchip Press Releases
- Technical Support Section with Frequently Asked Questions
- Design Tips
- Device Errata
- Job Postings
- Microchip Consultant Program Member Listing
- Links to other useful web sites related to Microchip Products
- Conferences for products, Development Systems, technical information and more
- Listing of seminars and events

## HCS101 PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

### Sales and Support

#### **Data Sheets**

Products supported by a preliminary Data Sheet may have an errata sheet describing minor operational differences and recommended workarounds. To determine if an errata sheet exists for a particular device, please contact one of the following:

1. Your local Microchip sales office.
2. The Microchip Worldwide Site. ([www.microchip.com](http://www.microchip.com))

## REVISION HISTORY

### **Revision D (January 2013)**

Added a note to each package outline drawing.

NOTES:

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

---

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION, INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights.

#### **Trademarks**

The Microchip name and logo, the Microchip logo, dsPIC, FlashFlex, KEELoQ, KEELoQ logo, MPLAB, PIC, PICmicro, PICSTART, PIC<sup>32</sup> logo, rPIC, SST, SST Logo, SuperFlash and UNI/O are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

FilterLab, Hampshire, HI-TECH C, Linear Active Thermistor, MTP, SEEVAL and The Embedded Control Solutions Company are registered trademarks of Microchip Technology Incorporated in the U.S.A.

Silicon Storage Technology is a registered trademark of Microchip Technology Inc. in other countries.

Analog-for-the-Digital Age, Application Maestro, BodyCom, chipKIT, chipKIT logo, CodeGuard, dsPICDEM, dsPICDEM.net, dsPICworks, dsSPEAK, ECAN, ECONOMONITOR, FanSense, HI-TIDE, In-Circuit Serial Programming, ICSP, Mindi, MiWi, MPASM, MPF, MPLAB Certified logo, MPLIB, MPLINK, mTouch, Omniscient Code Generation, PICC, PICC-18, PICDEM, PICDEM.net, PICkit, PICTail, REAL ICE, rLAB, Select Mode, SQI, Serial Quad I/O, Total Endurance, TSHARC, UniWinDriver, WiperLock, ZENA and Z-Scale are trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

SQTP is a service mark of Microchip Technology Incorporated in the U.S.A.

GestIC and ULPP are registered trademarks of Microchip Technology Germany II GmbH & Co. & KG, a subsidiary of Microchip Technology Inc., in other countries.

All other trademarks mentioned herein are property of their respective companies.

**QUALITY MANAGEMENT SYSTEM**  
**CERTIFIED BY DNV**  
**== ISO/TS 16949 ==**

*Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELoQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.*

**Стандарт  
Электрон  
Связь**

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
