

### FEATURES

- Pretrimmed to  $\pm 0.5\%$  maximum 4-quadrant error
- All inputs (X, Y, and Z) differential, high impedance for  $[(X_1 - X_2)(Y_1 - Y_2)/10] + Z_2$  transfer function
- Scale-factor adjustable to provide up to  $\times 10$  gain
- Low noise design: 90 mV rms, 10 Hz to 10 kHz
- Low cost, monolithic construction
- Excellent long-term stability

### APPLICATIONS

- High quality analog signal processing
- Differential ratio and percentage computations
- Algebraic and trigonometric function synthesis
- Accurate voltage controlled oscillators and filters

### GENERAL DESCRIPTION

The AD632 is an internally trimmed monolithic four-quadrant multiplier/divider. The AD632B has a maximum multiplying error of  $\pm 0.5\%$  without external trims.

Excellent supply rejection, low temperature coefficients, and long-term stability of the on-chip thin film resistors and buried zener reference preserve accuracy even under adverse conditions. The simplicity and flexibility of use provide an attractive alternative approach to the solution of complex control functions.

The AD632 is pin-for-pin compatible with the industry standard AD532 but with improved specifications and a fully differential high impedance Z input. The AD632 is capable of providing gains of up to  $\times 10$ , frequently eliminating the need for separate instrumentation amplifiers to precondition the inputs. The AD632 can be effectively employed as a variable gain differential input amplifier with high common-mode

### FUNCTIONAL BLOCK DIAGRAM

Figure 1.

rejection. The effectiveness of the variable gain capability is enhanced by the inherent low noise of the AD632 at 90  $\mu$ V rms.

### PRODUCT HIGHLIGHTS

- Guaranteed performance over temperature.
- The AD632A and AD632B are specified for maximum multiplying errors of  $\pm 1.0\%$  and  $\pm 0.5\%$  of full scale, respectively, at  $+25^\circ\text{C}$  and are rated for operation from  $-25^\circ\text{C}$  to  $+85^\circ\text{C}$ .
- Maximum multiplying errors of  $\pm 2.0\%$  (AD632S) and  $\pm 1.0\%$  (AD632T) are guaranteed over the extended temperature range of  $-55^\circ\text{C}$  to  $+125^\circ\text{C}$ .
- High reliability.
- The AD632S and AD632T series are available with MIL-STD-883 Level B screening.
- All devices are available in either the hermetically sealed TO-100 metal can or ceramic DIP package.

## SPECIFICATIONS

@ +25°C,  $V_s = \pm 15$  V,  $R \geq 2$  k $\Omega$ , unless otherwise noted. Specifications shown in boldface are tested on all production units at final electrical test. Results from those tests are used to calculate outgoing quality levels.

# TYPICAL PERFORMANCE CHARACTERISTICS

Typical @ 25°C with  $\pm V_S = 15\text{ V}$ .

Figure 4. AC Feedthrough vs. Frequency

Figure 6. Frequency Response vs. Divider Denominator Input Voltage

Figure 5. Frequency Response as a Multiplier

## OPERATION AS A MULTIPLIER

Figure 7 shows the basic connection for multiplication. Note that the circuit meets all specifications without trimming.

Figure 7. Basic Multiplier Connection

When needed, the user can reduce ac feedthrough to a minimum (as in a suppressed carrier modulator) by applying an external trim voltage ( $\pm 30$  mV range required) to the X or Y input. Figure 4 shows the typical ac feedthrough with this adjustment mode. Note that the feedthrough of the Y input is a factor of 10 lower than that of the X input and is to be used for applications where null suppression is critical.

The  $Z_2$  terminal of the AD632 can be used to sum an additional signal into the output. In this mode, the output amplifier behaves as a voltage follower with a 1 MHz small signal bandwidth and a 20 V/ $\mu$ s slew rate. Always reference this terminal to the ground point of the driven system, particularly if this is remote. Likewise, reference the differential inputs to their respective signal common potentials to realize the full accuracy of the AD632.

A much lower scaling voltage can be achieved without any reduction of input signal range using a feedback attenuator, as shown in Figure 8. In this example, the scale is such that  $V_{OUT} = XY$ , so that the circuit can exhibit a maximum gain of 10. This connection results in a reduction of bandwidth to about 80 kHz without the peaking capacitor,  $C_F$ . In addition, the output offset voltage is increased by a factor of 10 making external adjustments necessary in some applications.

Feedback attenuation also retains the capability for adding a signal to the output. Signals can be applied to the Z terminal, where they are amplified by  $-10$ , or to the common ground connection where they are amplified by  $-1$ . Input signals can also be applied to the lower end of the 2.7 k $\Omega$  resistor, giving a gain of  $+9$ .

Figure 8. Connections for Scale Factor of Unity

### OPERATION AS A DIVIDER

Figure 9 shows the connection required for division. Unlike earlier products, the AD632 provides differential operation on both the numerator and the denominator, allowing the ratio of two floating variables to be generated. Further flexibility results from access to a high impedance summing input to Y<sub>1</sub>. As with all dividers based on the use of a multiplier in a feedback loop, the bandwidth is proportional to the denominator magnitude, as shown in Figure 6.

The accuracy of the AD632 B-model is sufficient to maintain a 1% error over a 10 V to 1 V denominator range.

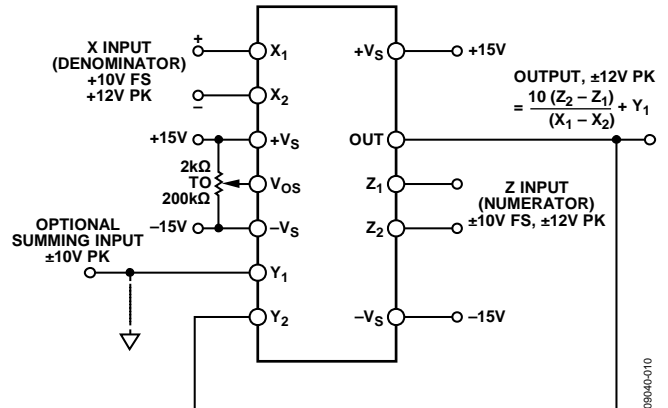

Figure 9. Basic Divider Connection

## Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
