

## Double channel high-side driver with analog current sense for automotive applications

Datasheet - production data

### Features

Max transient supply voltage	$V_{CC}$	41V
Operating voltage range	$V_{CC}$	4.5 to 28V
Max on-state resistance (per ch.)	$R_{ON}$	12 m $\Omega$
Current limitation (typ)	$I_{LIMH}$	74 A
Off-state supply current	$I_S$	2 $\mu A^{(1)}$

1. Typical value with all loads connected

- General:
  - Inrush current active management by power limitation
  - Very low standby current
  - 3.0 V CMOS compatible input
  - Optimized electromagnetic emission
  - Very low electromagnetic susceptibility
  - In compliance with the 2002/95/EC european directive
  - Proportional load current sense
  - High current sense precision for wide range current
  - Very low current sense leakage
- Diagnostic functions:
  - Off-state open-load detection
  - Current sense disable
  - Thermal shutdown indication
  - Output short to  $V_{CC}$  detection
  - Overload and short to ground (power limitation) indication
- Protection:

- Undervoltage shutdown
- Overvoltage clamp
- Load current limitation
- Self limiting of fast thermal transients
- Protection against loss of ground and loss of  $V_{CC}$
- Thermal shutdown
- Reverse battery protection with self switch of the Power MOS
- Electrostatic discharge protection

### Applications

- All types of resistive, inductive and capacitive loads
- Suitable as LED driver

### Description

The VND5E012AY-E is a device made using STMicroelectronics® VIPower® M0-5 technology. It is intended for driving resistive or inductive loads with one side connected to ground. Active  $V_{CC}$  pin voltage clamp protects the device against low energy spikes.

This device integrates an analog current sense which delivers a current proportional to the load current when CS\_DIS high leads the current sense pin in high impedance.

Fault conditions such as overload, overtemperature or openload are reported via the current sense pin.

Output current limitation protects the device in overload condition. In case of long overload duration, the device limits the dissipated power to safe level up to thermal shutdown intervention. Thermal shutdown with automatic restart allows the device to recover normal operation as soon as fault condition disappears.

# 1 Block diagram and pin description

Figure 1. Block diagram

Table 1. Pin function

Name	Function
V <sub>CC</sub>	Battery connection
OUT <sub>1,2</sub>	Power output
GND	Ground connection
IN <sub>1,2</sub>	Voltage controlled input pin with hysteresis, CMOS compatible; controls output switch state
CS <sub>1,2</sub>	Analog current sense pin delivers a current proportional to the load current
CS_DIS	Active high CMOS compatible pin, to disable the current sense pin

Figure 2. Configuration diagram (top view)

Table 2. Suggested connections for unused and not connected pins

Connection / pin	Current sense	Not connected	Output	Input	CS_DIS
Floating	Not allowed	X	X	X	X
To ground	Through 1 KΩ resistor	X	Not allowed	Through 10 KΩ resistor	Through 10 KΩ resistor

## 2 Electrical specifications

Figure 3. Current and voltage conventions

### 2.1 Absolute maximum ratings

Applying stress which exceeds the ratings listed in the [Table 3](#) may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the operating sections of this specification is not implied. Exposure to the conditions in this section for extended periods may affect device reliability.

Table 3. Absolute maximum ratings

Symbol	Parameter	Value	Unit
$V_{CC}$	DC supply voltage	28	V
$V_{CCPK}$	Transient supply voltage ( $T < 400$ ms, $R_{LOAD} > 0.5 \Omega$ )	41	V
$-V_{CC}$	Reverse DC supply voltage	16	V
$V_{CC\_LSC}$	Maximum supply voltage for full protection to short-circuit (acc. AEC-Q100-012)	18	V
$-I_{GND}$	DC reverse ground pin current	200	mA
$I_{OUT}$	DC output current	Internally limited	A
$-I_{OUT}$	Reverse DC output current	50	A
$I_{IN}$	DC input current	-1 to 10	mA
$I_{CSD}$	DC current sense disable input current	-1 to 10	mA
$-I_{CSENSE}$	DC Reverse CS pin current	200	mA
$V_{CSENSE}$	Current sense maximum voltage	$V_{CC}-41$ $+V_{CC}$	V V

**Table 3. Absolute maximum ratings (continued)**

Symbol	Parameter	Value	Unit
$E_{MAX}$	Maximum switching energy (single pulse) ( $L = 0.47 \text{ mH}$ ; $R_L = 0 \text{ }\Omega$ ; $V_{bat} = 13.5 \text{ V}$ ; $T_{jstart} = 150 \text{ }^\circ\text{C}$ ; $I_{OUT} = I_{limL}(Typ.)$ )	110	mJ
$V_{ESD}$	Electrostatic Discharge (Human Body Model: $R=1.5K\Omega$ ; $C=100\text{pF}$ ) – $V_{CC}$ , OUTPUT – INPUT, CS_DIS – CURRENT SENSE	5000 4000 2000	V
$V_{ESD}$	Charge device model (CDM-AEC-Q100-011)	750	V
$T_j$	Junction operating temperature	-40 to 150	$^\circ\text{C}$
$T_{stg}$	Storage temperature	-55 to 150	$^\circ\text{C}$

## 2.2 Thermal data

**Table 4. Thermal data**

Symbol	Parameter	Maximum value	Unit
$R_{thj-case}$	Thermal resistance junction-case (With one channel ON)	2	$^\circ\text{C/W}$
$R_{thj-amb}$	Thermal resistance junction-ambient	See <a href="#">Figure 36</a> in the thermal section	$^\circ\text{C/W}$

## 2.3 Electrical characteristics

$8V < V_{CC} < 28V$ ;  $-40^{\circ}C < T_j < 150^{\circ}C$ , unless otherwise specified

**Table 5. Power section**

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
$V_{CC}$	Operating supply voltage		4.5	13	28	V
$V_{USD}$	Undervoltage shutdown			3.5	4.5	V
$V_{USDhyst}$	Undervoltage shutdown hysteresis			0.5		V
$R_{ON}$	On-state resistance	$I_{OUT}=5A$ ; $T_j=25^{\circ}C$		11	16

1. To ensure long term reliability under heavy overload or short circuit conditions, protection and related diagnostic signals must be used together with a proper software strategy. If the device is subjected to abnormal conditions, this software must limit the duration and number of activation cycles

Table 10. Logic input

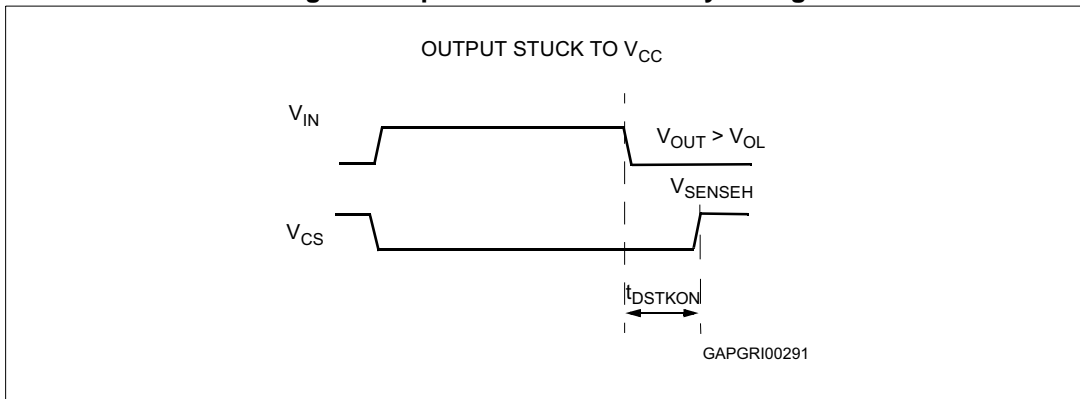

Figure 6.  $I_{OUT}/I_{SENSE}$  vs  $I_{OUT}$

Figure 7. Maximum current sense ratio drift vs load current

Table 11. Truth table

Conditions	Input	Output	Sense( $V_{CSD}=0V$ ) <sup>(1)</sup>
Normal operation	L	L	0
	H	H	Nominal
Overtemperature	L	L	0
	H	L	$V_{SENSEH}$
Undervoltage	L	L	0
	H	L	0
Overload	H	X (no power limitation)	Nominal
	H	Cycling (power limitation)	$V_{SENSEH}$
Short circuit to GND (Power limitation)	L	L	0
	H	L	$V_{SENSEH}$
Open load off-state (with external pull up)	L	H	$V_{SENSEH}$
Short circuit to $V_{CC}$ (external pull up disconnected)	L	H	$V_{SENSEH}$
	H	H	< Nominal
Negative output voltage clamp	L	L	0

1. If the  $V_{CSD}$  is high, the SENSE output is at a high impedance; its potential depends on leakage currents and external circuit

Figure 8. Switching characteristics

Figure 9. Delay response time between rising edge of ouput current and rising edge of current sense (CS enabled)

Figure 10. Output voltage drop limitation

Table 12. Electrical transient requirements (part 1)

ISO 7637-2: 2004(E) Test Pulse	Test levels <sup>(1)</sup>		Number of pulses or test times	Burst cycle/pulse repetition time		Delays and impedance
	III	IV				
1	-75 V	-100 V	5000 pulses	0.5 s	5 s	2 ms, 10 $\Omega$
2a	+37 V	+50 V	5000 pulses	0.2 s	5 s	50 $\mu$ s, 2 $\Omega$
3a	-100 V	-150 V	1h	90 ms	100 ms	0.1 $\mu$ s, 50 $\Omega$
3b	+75 V	+100 V	1h	90 ms	100 ms	0.1 $\mu$ s, 50 $\Omega$
4	-6 V	-7 V	1 pulse			100 ms, 0.01 $\Omega$
5b <sup>(2)</sup>	+65 V	+87 V	1 pulse			400 ms, 2 $\Omega$

1. The above test levels must be considered referred to  $V_{CC} = 13.5$  V except for pulse 5b
2. Valid in case of external load dump clamp: 40V maximum referred to ground. The protection strategy allows PowerMOS to be cyclically switched on during load dump, so distributing the load dump energy along the time and to transfer a part of it to the load.

Table 13. Electrical transient requirements (part 2)

ISO 7637-2: 2004(E) Test pulse	Test level results <sup>(1)</sup>	
	III	IV
1	C	C
2a	C	C
3a	C	C
3b	C	C
4	C	C
5b <sup>(2)</sup> (3)	C	C

1. The above test levels must be considered referred to  $V_{CC} = 13.5$  V except for pulse 5b
2. Valid in case of external load dump clamp: 40V maximum referred to ground. The protection strategy allows PowerMOS to be cyclically switched on during load dump, so distributing the load dump energy along the time and to transfer a part of it to the load.
3. Suppressed load dump (pulse 5b) is withstood with a minimum load connected as specified in [Table 3: Absolute maximum ratings](#)

Table 14. Electrical transient requirements (part 3)

Class	Contents
C	All functions of the device are performed as designed after exposure to disturbance.
E	One or more functions of the device are not performed as designed after exposure to disturbance and cannot be returned to proper operation without replacing the device.

### 3 Application information

Figure 32. Application schematic

Note: Channel 2 has the same internal circuit as channel 1.

#### 3.1 Load dump protection

D<sub>ld</sub> is necessary (Voltage Transient Suppressor) if the load dump peak voltage exceeds the V<sub>CCPK</sub> max rating. The same applies if the device is subject to transients on the V<sub>CC</sub> line that are greater than the ones shown in the ISO T/R 7637/1 table.

#### 3.2 MCU I/Os protection

When negative transients are present on the V<sub>CC</sub> line, the control pin is pulled negative to approximately -1.5 V. ST suggests to insert a resistor (R<sub>prot</sub>) in line to prevent the microcontroller I/Os pins from latching-up.

The value of these resistors is a compromise between the leakage current of microcontroller and the current required by the HSD I/Os (input levels compatibility) with the latch-up limit of microcontroller I/Os.

##### Equation 1

$$V_{CCpeak} / I_{latchup} \leq R_{prot} \leq (V_{OH\mu C} - V_{IH}) / I_{IHmax}$$

Calculation example:

For V<sub>CCpeak</sub> = - 1.5 V; I<sub>latchup</sub> ≥ 20 mA; V<sub>OHµC</sub> ≥ 4.5 V

$$75 \Omega \leq R_{prot} \leq 240 \text{ k}\Omega.$$

Recommended values:  $R_{\text{prot}} = 10 \text{ k}\Omega$ ,  $C_{\text{EXT}} = 10 \text{ nF}$ .

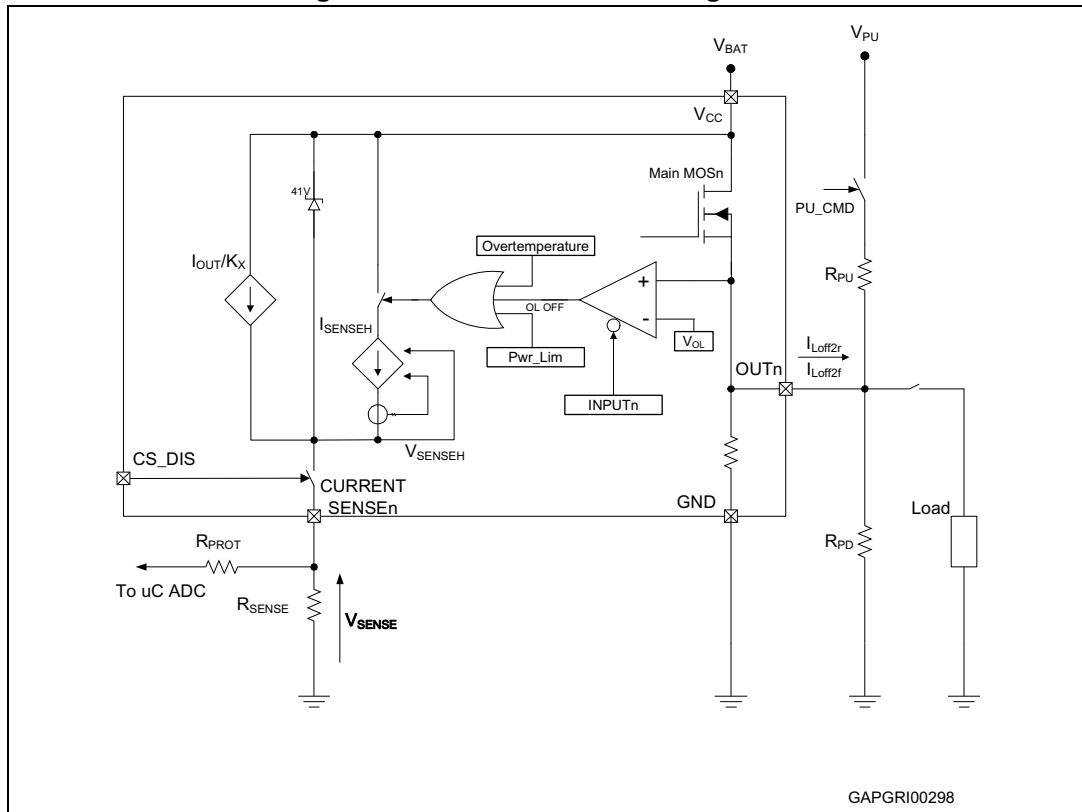

### 3.3 Current sense and diagnostic

The current sense pin performs a double function (see [Figure 33: Current sense and diagnostic](#)):

- **Current mirror of the load current in normal operation**, delivering a current proportional to the load one according to a known ratio  $K_x$ .  
The current  $I_{\text{SENSE}}$  can be easily converted to a voltage  $V_{\text{SENSE}}$  by means of an external resistor  $R_{\text{SENSE}}$ . Linearity between  $I_{\text{OUT}}$  and  $V_{\text{SENSE}}$  is ensured up to 5 V minimum (see parameter  $V_{\text{SENSE}}$  in [Table 7: Current sense \(8V < V<sub>CC</sub> < 18V\)](#)). The current sense accuracy depends on the output current (refer to current sense electrical characteristics [Table 7: Current sense \(8V < V<sub>CC</sub> < 18V\)](#)).
- **Diagnostic flag in fault conditions**, delivering a fixed voltage  $V_{\text{SENSEH}}$  up to a maximum current  $I_{\text{SENSEH}}$  in case of the following fault conditions (refer to [Table 11: Truth table](#)):
  - Power limitation activation
  - Overtemperature
  - Short to  $V_{\text{CC}}$  in off-state
  - Open load in off-state with additional external components.

A logic level high on CS\_DIS pin sets at the same time all the current sense pins of the device in a high-impedance state, thus disabling the current monitoring and diagnostic detection. This feature allows multiplexing of the microcontroller analog inputs by sharing of sense resistance and ADC line among different devices.

Figure 33. Current sense and diagnostic

GAPGRI00298

### 3.3.1 Short to $V_{CC}$ and off-state open-load detection

#### Short to $V_{CC}$

A short-circuit between  $V_{CC}$  and output is indicated by the relevant current sense pin set to  $V_{SENSEH}$  during the device OFF-state. Small or no current is delivered by the current sense during the ON-state depending on the nature of the short-circuit.

#### Off-state open-load with external circuitry

Detection of an open load in off mode requires an external pull-up resistor  $R_{PU}$  connecting the output to a positive supply voltage  $V_{PU}$ .

It is preferable  $V_{PU}$  to be switched off during the module standby mode in order to avoid the overall standby current consumption to increase in normal conditions, i.e. when load is connected.

An external pull-down resistor  $R_{PD}$  connected between output and GND is mandatory to avoid misdetection in case of floating outputs in off-state (see [Figure 33: Current sense and diagnostic](#)).

$R_{PD}$  must be selected in order to ensure  $V_{OUT} < V_{OLmin}$  unless pulled-up by the external circuitry:

**Equation 2**

$$V_{out}|_{Pull-up\_off} = R_{PD} \cdot I_{L(off2)f} < V_{OLmin} = 2V$$

$R_{PD} \leq 22 \text{ k}\Omega$  is recommended.

For proper open load detection in off-state, the external pull-up resistor must be selected according to the following formula:

**Equation 3**

$$V_{OUT}|_{Pull-up\_ON} = \frac{(R_{PD} \cdot V_{PU}) - (R_{PU} \cdot R_{PD} \cdot I_{L(off2)r})}{(R_{PU} + R_{PD})} > V_{OLmax} = 4V$$

For the values of  $V_{OLmin}$ ,  $V_{OLmax}$ ,  $I_{L(off2)r}$  and  $I_{L(off2)f}$  (see [Table 8: Open-load detection \(8V < V<sub>CC</sub> < 18V\)](#)).

### 3.4 Maximum demagnetization energy ( $V_{CC} = 13.5\text{ V}$ )

Figure 34. Maximum turn-off current versus inductance<sup>(1)</sup>

1. Values are generated with  $R_L = 0\ \Omega$ .

In case of repetitive pulses,  $T_{jstart}$  (at beginning of each demagnetization) of every pulse must not exceed the temperature specified above for curves A and B.

## 4 Package and PCB thermal data

### 4.1 PowerSSO-36 thermal data

Figure 35. PowerSSO-36 PC board

Note: Layout condition of  $R_{th}$  and  $Z_{th}$  measurements (PCB: Double layer, Thermal Vias, FR4 area= 129mm x 60mm, PCB thickness=1.6mm, Cu thickness=70 $\mu$ m (front and back side), Copper areas: from minimum pad lay-out to 8cm<sup>2</sup>).

Figure 36.  $R_{thj-amb}$  vs PCB copper area in open box free air condition (one channel ON)

Figure 37. PowerSSO-36 Thermal impedance junction ambient single pulse (one channel ON)

Figure 38. Thermal fitting model of a double channel HSD in PowerSSO-36<sup>(1)</sup>

1. The fitting model is a simplified thermal tool and is valid for transient evolutions where the embedded protections (power limitation or thermal cycling during thermal shutdown) are not triggered

**Equation 4: pulse calculation formula**

$$Z_{TH\delta} = R_{TH} \cdot \delta + Z_{THtp}(1 - \delta)$$

where:

**Equation 5**

$$\delta = t_p / T$$

## 5 Package information

### 5.1 ECOPACK<sup>®</sup> package

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK<sup>®</sup> packages, depending on their level of environmental compliance. ECOPACK<sup>®</sup> specifications, grade definitions and product status are available at: [www.st.com](http://www.st.com). ECOPACK<sup>®</sup> is an ST trademark.

## Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
