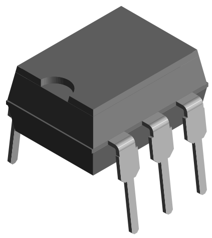
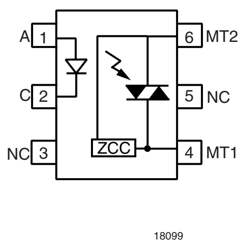
Optocoupler, Phototriac Output, Zero Crossing, High dV/dt, Very Low Input Current





DESCRIPTION

The IL4116/IL4117/IL4118 consists of an AlGaAs IRLED optically coupled to a photosensitive zero crossing TRIAC network. The TRIAC consists of two inverse parallel connected monolithic SCRs. These three semiconductors devices are assembled in a six pin 300 mil dual in-line package.
High input sensitivity is achieved by using an emitter follower phototransistor and a cascaded SCR predriver resulting in an LED trigger current of less than 1.3 mA (DC).
The IL4116/IL4117/IL4118 uses zero cross line voltage detection circuit witch consists of two enhancement MOSFETs and a photodiode. The inhibit voltage of the network is determined by the enhancement voltage of the N-channel FET. The P-channel FET is enabled by a photocurrent source that permits the FET to conduct the main voltage to gate on the N-channel FET. Once the main voltage can enable the N-channel, it clamps the base of the phototransistor, disabling the first stage SCR predriver.
The blocking voltage of up to 800 V permits control of off-line voltages up to 240 VAC, with a safety factor of more than two, and is sufficient for as much as 380 VAC. Current handling capability is up to 300 mA RMS continuous at 25 °C.
The IL4116/IL4117/IL4118 isolates low-voltage logic from 120, 240, and 380 VAC lines to control resistive, inductive, or capacitive loads including motors, solenoids, high current thyristors or TRIAC and relays.

Applications include solid-state relays, industrial controls, office equipment, and consumer appliances.

FEATURES

- High input sensitivity: I_{FT} = 1.3 mA, PF = 1.0; I_{FT} = 3.5 mA, typical PF < 1.0
- Zero voltage crossing
- 600/700/800 V blocking voltage
- 300 mA on-state current
- High dV/dt 10000 V/µs
- Inverse parallel SCRs provide commutating dV/dt > 10 kV/µs
- Isolation test voltage 5300 V_{RMS}
- Very low leakage < 10 µA
- Lead (Pb)-free component
- Component in accordance to RoHS 2002/95/EC and WEEE 2002/96/EC

Pb-free
e3
RoHS COMPLIANT

APPLICATIONS

- Solid state relay
- Lighting controls
- Temperature controls
- Solenoid/valte controls
- AC motor drives/starters

AGENCY APPROVALS

- UL1577, file no. E52744 system code H or J, double protection
- CSA 93751
- BSI IEC 60950 IEC 60065
- DIN EN 60747-5-2 (VDE 0884)/DIN EN 60747-5-5 pending available with option 1
- FIMKO

Operating temperature			T_{amb}	- 55 to + 100	°C
Isolation test voltage			V_{IO}	5300	V_{RMS}
Isolation resistance	V_{IO} = 500 V, T_{amb} = 25 °C		R_{IO}	$\geq 10^{12}$	Ω
	V_{IO} = 500 V, T_{amb} = 100 °C		R_{IO}	$\geq 10^{11}$	Ω
Lead soldering temperature [2]	5 s		T_{sld}	260	°C

Notes

(1) T_{amb} = 25 °C, unless otherwise specified
Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of this document. Exposure to absolute maximum ratings for extended periods of the time can adversely affect reliability.

(2) Refer to reflow profile for soldering conditions for surface mounted devices (SMD). Refer to wave profile for soldering conditions for through hole devices (DIP).

ELECTRICAL CHARACTERISTICS

PARAMETER	TEST CONDITION	PART	SYMBOL	MIN.	TYP.	MAX.	UNIT
INPUT							
Forward voltage	I_F = 20 mA		V_F		1.3	1.5	V
Breakdown voltage	I_R = 10 µA		V_{BR}	6.0	30		V
Reverse current	V_R = 6.0 V		I_R		0.1	10	µA
Capacitance	V_F = 0 V, f = 1.0 MHz		C_O		40		pF
Thermal resistance, junction to lead			R_{thjl}		750		°C/W
OUTPUT							
Repetitive peak off-state voltage	I_{DRM} = 100 µA	IL4116	V_{DRM}	600	650		V
		IL4117	V_{DRM}	700	750		V
		IL4118	V_{DRM}	800	850		V
Off-state voltage	$I_{D(RMS)}$ =70 µA	IL4116	$V_{D(RMS)}$	424	460		V
		IL4117	$V_{D(RMS)}$	494	536		V
		IL4118	$V_{D(RMS)}$	565	613		V
Off-state current	V_D = 600, T_{amb} = 100 °C		$I_{D(RMS)}$		10	100	µA
On-state voltage	I_T = 300 mA		V_{TM}		1.7	3.0	V
On-state current	PF = 1.0, $V_{T(RMS)}$ = 1.7 V		I_{TM}			300	mA
Surge (non-repetitive, on-state current)	f = 50 Hz		I_{TSM}			3.0	A
Holding current	V_T = 3.0 V		I_H		65	200	µA
Latching current	V_T = 2.2 V		I_L		5.0		mA
LED trigger current	V_{AK} = 5.0 V		I_{FT}		0.7	1.3	mA
Zero cross inhibit voltage	I_F = rated I_{FT}		V_{IH}		15	25	V
Critical rate of rise off-state voltage	V_{RM}, V_{DM} = 400 VAC		$dV_{(MT)}/dt$	10000			V/µs
	V_{RM}, V_{DM} = 400 VAC, T_{amb} = 80 °C		$dV_{(MT)}/dt$		2000		V/µs
Commutating voltage	V_{RM}, V_{DM} = 400 VAC		$dV_{(COM)}/dt$	10000			V/µs
	V_{RM}, V_{DM} = 400 VAC, T_{amb} = 80 °C		$dV_{(COM)}/dt$		2000		V/µs
Commutating current	I_T = 300 mA		dI/dt		100		A/ms
Thermal resistance, junction to lead			R_{thjl}		150		°C/W
COUPLER							
Critical state of rise of coupler input-output voltage	I_T = 0 A, V_{RM} = V_{DM} = 424 VAC		$dV_{(IO)}/dt$	10000			V/µs
Capacitance (input to output)	f = 1.0 MHz, V_{IO} = 0 V		C_{IO}		0.8		pF
Common mode coupling capacitance			C_{CM}		0.01		pF

Note

T_{amb} = 25 °C, unless otherwise specified
Minimum and maximum values are testing requirements. Typical values are characteristics of the device and are the result of engineering evaluation. Typical values are for information only and are not part of the testing requirements.

SWITCHING CHARACTERISTICS

PARAMETER	TEST CONDITION	PART	SYMBOL	MIN.	TYP.	MAX.	UNIT
Turn-on time	V_{RM} = V_{DM} = 424 VAC		t_{on}		35		µs
Turn-off time	PF = 1.0, I_T = 300 mA		t_{off}		50		µs

Power Factor Considerations

A snubber isn't needed to eliminate false operation of the TRIAC driver because of the IL4116/IL4117/IL4118 high static and commutating dV/dt with loads between 1 and 0.8 power factors. When inductive loads with power factors less than 0.8 are being driven, include an RC snubber or a single capacitor directly across the device to damp the peak commutating dV/dt spike. Normally a commutating dV/dt causes a turning-off device to stay on due to the stored energy remaining in the turn-off device.

But in the case of a zero voltage crossing optotriac, the commutating dV/dt spikes can inhibit one half of the TRIAC from turning on. If the spike potential exceeds the inhibit voltage of the zero cross detection circuit, half of the TRIAC will be held-off and not turn-on. This hold-off condition can be eliminated by using a snubber or capacitor placed directly across the optotriac as shown in Figure 7. Note that the value of the capacitor increases as a function of the load current.

The hold-off condition also can be eliminated by providing a higher level of LED drive current. The higher LED drive provides a larger photocurrent which causes. The phototransistor to turn-on before the commutating spike has activated the zero cross network. Figure 8 shows the relationship of the LED drive for power factors of less than 1.0. The curve shows that if a device requires 1.5 mA for a resistive load, then 1.8 times (2.7 mA) that amount would be required to control an inductive load whose power factor is less than 0.3.

OZONE DEPLETING SUBSTANCES POLICY STATEMENT

It is the policy of Vishay Semiconductor GmbH to

1. Meet all present and future national and international statutory requirements.
2. Regularly and continuously improve the performance of our products, processes, distribution and operating systems with respect to their impact on the health and safety of our employees and the public, as well as their impact on the environment.

It is particular concern to control or eliminate releases of those substances into the atmosphere which are known as ozone depleting substances (ODSs).

The Montreal Protocol (1987) and its London Amendments (1990) intend to severely restrict the use of ODSs and forbid their use within the next ten years. Various national and international initiatives are pressing for an earlier ban on these substances.

Vishay Semiconductor GmbH has been able to use its policy of continuous improvements to eliminate the use of ODSs listed in the following documents.

1. Annex A, B and list of transitional substances of the Montreal Protocol and the London Amendments respectively.
2. Class I and II ozone depleting substances in the Clean Air Act Amendments of 1990 by the Environmental Protection Agency (EPA) in the USA.
3. Council Decision 88/540/EEC and 91/690/EEC Annex A, B and C (transitional substances) respectively.

Vishay Semiconductor GmbH can certify that our semiconductors are not manufactured with ozone depleting substances and do not contain such substances.

Vishay Semiconductor GmbH, P.O.B. 3535, D-74025 Heilbronn, Germany

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
