Product Bin and Labeling Definitions

Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheet. For this reason, Lumileds bins LED components for luminous flux or radiometric power, forward voltage, and color point, peak wavelength, or dominant wavelength.

LUXEON 3014 LEDs are labeled using a 4-digit alphanumeric CAT code following the format below:

A B C D

- A** – designates luminous flux bin (example: B=10.0 to 11.5 lumens, F=17.0 to 19.0 lumens)
- B C** – designates color bin (example: 7D, 7E, 7F, 7G, 7H, 7J, 7K, 7L, 7M for 3000K parts)
- D** – designates forward voltage bin (example: T=2.80V to 2.90V, W=3.00V to 3.10V)

Therefore, a LUXEON 3014 with a lumen range of 10.0 to 11.5, color bin of 7D and a forward voltage of 2.80V to 2.90V has the following CAT code:

B 7 D T

Luminous Flux Bins

Table 5 lists the standard photometric luminous flux bins for LUXEON 3014 emitters. Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all CCTs.
