# Honeywell Zephyr™ Analog Airflow Sensors

## HAF Series - High Accuracy

Honeywell Zephyr™ HAF Series sensors provide an analog interface for reading airflow over specified full-scale flow and compensated temperature ranges. The thermally isolated heater and temperature sensing elements help these sensors provide a fast response to air or gas flow.

Zephyr sensors are designed to measure mass flow of air and other non-corrosive gases. Standard flow ranges are available at  $\pm 50$ ,  $\pm 100$ ,  $\pm 200$ ,  $\pm 400$  or  $\pm 750$  SCCM. Custom flow ranges are also available. The sensors are fully calibrated and temperature compensated with an onboard Application Specific Integrated Circuit (ASIC).

The HAF Series is compensated over the temperature range of 0 °C to 50 °C [32 °F to 122 °F] and operates across a temperature range of -20 °C to 70 °C [-4 °F to 158 °F]. The state-of-the-art ASIC-based compensation provides analog outputs with a response time of 1 ms.

These sensors operate on the heat transfer principle to measure mass airflow. They consist of a microbridge Microelectronic and Microelectromechanical System (MEMS) with temperature-sensitive resistors deposited with thin films of platinum and silicon nitride. The MEMS sensing die is located in a precise and carefully designed airflow channel to provide repeatable response to flow.

Zephyr sensors provide the customer with enhanced reliability, high accuracy, repeatable measurements and the ability to customize sensor options to meet many specific application needs. The combination of rugged housings with a stable substrate makes these products extremely robust. They are designed and manufactured according to ISO 9001 standards

### ***What makes our sensors better?***

- ◉ **Fast response time**
- ◉ **Wide range of airflows**
- ◉ **Customizable flow ranges and configurable package styles**
- ◉ **Linear output**
- ◉ **High stability**
- ◉ **Low pressure drop**

TIGHT TOTAL ERROR BAND • FAST RESPONSE TIME • WIDE RANGE OF AIRFLOWS

# Features and Benefits

## **FAST RESPONSE TIME\***

Allows a customer's application to respond quickly to airflow change, important in critical medical (e.g., anesthesia) and industrial (e.g., fume hood) applications.

## **WIDE RANGE OF AIRFLOWS\***

Zephyr measures mass flow at standard flow ranges of  $\pm 50$ ,  $\pm 100$ ,  $\pm 200$ ,  $\pm 400$  or  $\pm 750$  SCCM, or custom flow ranges, increasing the options for integrating the sensor into the application.

## **CUSTOMIZABLE FLOW RANGES AND CONFIGURABLE PACKAGE STYLES\***

Meet specific end-user needs.

## **FULL CALIBRATION AND TEMPERATURE COMPENSATION**

Typically allow customer to remove additional components associated with signal conditioning from the PCB, reducing PCB size as well as costs often associated with those components (e.g., acquisition, inventory, assembly).

## **LINEAR OUTPUT\***

Provides more intuitive sensor signal than the raw output of basic airflow sensors, which can help reduce production costs, design, and implementation time.

## **LOW PRESSURE DROP\***

Typically improves patient comfort in medical applications, and reduces noise and system wear on other components such as motors and pumps.

## **0.049 %FS RESOLUTION**

Increases ability to sense small airflow changes, allowing customers to more precisely control their application.

## **LOW 3.3 VDC OPERATING VOLTAGE OPTION AND LOW POWER CONSUMPTION**

Allow for use in battery-driven and other portable applications.

## **SMALL SIZE**

Occupies less space on PCB, allowing easier fit and potentially reducing production costs; PCB size may also be reduced for easier fit into space-constrained applications.

## **ROHS-COMPLIANT MATERIALS**

Meet Directive 2002/95/EC.

**Table 1. Absolute Maximum Ratings<sup>1</sup>**

| Characteristic               | Parameter                           |
|------------------------------|-------------------------------------|
| Supply voltage               | -0.3 Vdc to 6.0 Vdc                 |
| Voltage on I/O output pin    | -0.3 Vdc to V <sub>supply</sub>     |
| Storage temperature range    | -40 °C to 125 °C [-40 °F to 257 °F] |
| Maximum flow change          | 5.0 SLPM/s                          |
| Maximum common mode pressure | 25 psi at 25 °C [77 °F]             |
| Maximum flow                 | 10 SLPM                             |

<sup>1</sup>Absolute maximum ratings are the extreme limits that the device will withstand without damage to the device. However, the electrical and mechanical characteristics are not guaranteed as the maximum limits (above recommended operating conditions) are approached, nor will the device necessarily operate at absolute maximum ratings.

## CAUTION

### IMPROPER USE

Do not use these products to sense liquid flow

**Failure to comply with these instructions may result in product damage.**

## CAUTION

### PRODUCT DAMAGE

Do not disassemble these products.

**Failure to comply with these instructions may result in product damage.**

| Null stability                       | ±0.06 %FSS max. deviation from null output after 1000 hrs at 25 °C | –    |
| Reverse polarity protection          | no                                                                 | –    |

<sup>1</sup>Maximum power: Is measured under the conditions of the highest supply voltage, V<sub>supply</sub> + 10%, 70 °C, full scale flow and with the minimum load specified for that supply voltage.

<sup>2</sup>Custom and extended compensated temperature ranges are possible. Contact Honeywell for details.

<sup>3</sup>Accuracy: The maximum deviation from the nominal output over the compensated flow range at a reference temperature of 25 °C. Errors include offset, span, non-linearity, hysteresis and non-repeatability.

<sup>4</sup>Full Scale Span (FSS): The algebraic difference between the output at the forward Full Scale (FS) flow and the output at the reverse FS flow. Forward flow is defined as flow from P1 to P2 as shown in Figure 9. The references to mass flow (SCCM) refer to gas flows at the standard conditions of 0 °C and atmospheric pressure 760 (101.3 kPa).

<sup>5</sup>Total Error Band: The maximum deviation in output from the ideal transfer function over the entire compensated temperature and flow range. Includes all errors due to offset, full scale span, flow hysteresis, flow repeatability, thermal effect on offset, thermal effect on span and thermal hysteresis.

<sup>6</sup>Null accuracy: The maximum deviation in output at 0 SCCM from the ideal transfer function over the compensated temperature range. This includes offset errors, thermal airflow hysteresis and repeatability errors.

<sup>7</sup>Response time: The time to electrically respond to any mass flow change at the microbridge airflow transducer (response time of the transducer may be affected by the pneumatic interface).

<sup>8</sup>Warm-up time: The time to the first valid flow measurement after power is applied.

<sup>9</sup>Default calibration media is dry nitrogen gas. Please contact Honeywell for other calibration options.

| Minimum suggested resistance:<br>3.3 Vdc<br>5.0 Vdc  | 3.3 kOhm<br>5 kOhm |
| Maximum suggested capacitance:<br>3.3 Vdc<br>5.0 Vdc | 10 nF<br>10 nF     |

## CAUTION

### LARGE PARTICULATE DAMAGE

Use a 5-micron filter upstream of the sensor to keep media flow through the sensor free of condensing moisture and particulates. Large, high-velocity particles or conductive particles may damage the sensing element.

**Failure to comply with these instructions may result in product damage.**

**Table 5. Environmental Characteristics**

| Characteristic | Parameter                    |
|----------------|------------------------------|
| Humidity       | 0% to 95% RH, non-condensing |
| Shock          | 100 g, 11 ms                 |
| Vibration      | 15 g at 20 Hz to 2000 Hz     |
| ESD            | Class 3B per MIL-STD 883G    |

**Figure 2. Nominal Analog Output**

# Honeywell Zephyr™ Analog Airflow Sensors

## HAF Series–High Accuracy

Figure 3. Ideal Transfer Function

$$V_o = V_s \left\{ 0.5 + 0.4 \frac{F_A}{F_{FS}} \right\}$$

$$F_A = \frac{F_{FS} (V_o/V_s - 0.5)}{0.4}$$

Where:

$V_o$ = output voltage of the device

$V_s$ = supply voltage measured at the device

$F_A$  = flow applied across the device

$F_{FS}$  = full scale flow specified for the device

Figure 4. Nomenclature and Order Guide

For example, a **HAFBLF0200CAAX5** part number defines a Honeywell Zephyr™ Analog Airflow Sensor, bidirectional forward flow optimized, long port, fastener mount, 200 SCCM, analog output, 10% to 90% transfer function, 5.0 Vdc supply voltage.

## ⚠ WARNING

### PERSONAL INJURY

**DO NOT USE** these products as safety or emergency stop devices or in any other application where failure of the product could result in personal injury.

**Failure to comply with these instructions could result in death or serious injury.**

## ⚠ WARNING

### MISUSE OF DOCUMENTATION

- The information presented in this product sheet is for reference only. Do not use this document as a product installation guide.
- Complete installation, operation, and maintenance information is provided in the instructions supplied with each product.

**Failure to comply with these instructions could result in death or serious injury.**

## WARRANTY/REMEDY

Honeywell warrants goods of its manufacture as being free of defective materials and faulty workmanship. Honeywell's standard product warranty applies unless agreed to otherwise by Honeywell in writing; please refer to your order acknowledgement or consult your local sales office for specific warranty details. If warranted goods are returned to Honeywell during the period of coverage, Honeywell will repair or replace, at its option, without charge those items it finds defective. **The foregoing is buyer's sole remedy and is in lieu of all other warranties, expressed or implied, including those of merchantability and fitness for a particular purpose. In no event shall Honeywell be liable for consequential, special, or indirect damages.**

While we provide application assistance personally, through our literature and the Honeywell website, it is up to the customer to determine the suitability of the product in the application.

Specifications may change without notice. The information we supply is believed to be accurate and reliable as of this issue; however, we assume no responsibility for its use.

**Стандарт  
Электрон  
Связь**

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
