

# Low Harmonic Distortion 32-Channel SPST High Voltage Analog Switch

## Features

- ▶ 32-channel high voltage analog switch
- ▶ 3.3V or 5.0V CMOS input logic level
- ▶ 30MHz data shift clock frequency
- ▶ HVCMOS technology for high performance
- ▶ Very low quiescent power dissipation (10µA)
- ▶ Low parasitic capacitance
- ▶ DC to 50MHz analog signal frequency
- ▶ -60dB typical off isolation at 5.0MHz
- ▶ CMOS logic circuitry for low power
- ▶ Excellent noise immunity
- ▶ Cascadable serial data register with latches
- ▶ Flexible operating supply voltages

## Applications

- ▶ Medical ultrasound imaging
- ▶ NDT metal flaw detection
- ▶ Piezoelectric transducer drivers
- ▶ Inkjet printer heads
- ▶ Optical MEMS modules

## General Description

The HV2802 is a low charge injection, 32-channel, high voltage analog switch intended for use in applications requiring high voltage switching controlled by low voltage control signals, such as medical ultrasound imaging, driving piezoelectric transducers, and printers.

Input data are shifted into a 32-bit shift register that can then be retained in a 32-bit latch. To reduce any possible clock feed through noise, the latch enable bar should be left high until all bits are clocked in. Data are clocked in during the rising edge of the clock. Using HVCMOS technology, this device combines high voltage bilateral DMOS switches and low power CMOS logic to provide efficient control of high voltage analog signals.

The device is suitable for various combinations of high voltage supplies, e.g.,  $V_{PP}/V_{NN}$ : +40V/-160V, +100V/-100V, and +160V/-40V.

## Block Diagram

## Ordering Information

Part Number	Package Option	Packing
HV2802LB-G	78-Ball LFGA	260/Tray

-G denotes a lead (Pb)-free / RoHS compliant package

## Absolute Maximum Ratings

Parameter	Value
$V_{DD}$ logic supply	-0.5V to +6.5V
$V_{PP} - V_{NN}$ differential supply	220V
$V_{PP}$ positive supply	-0.5V to $V_{NN}$ +200V
$V_{NN}$ negative supply	+0.5V to -200V
Logic input voltage	-0.5V to $V_{DD}$ +0.3V
Analog signal range	$V_{NN}$ to $V_{PP}$
Peak analog signal current/channel	3.0A
Storage temperature	-65°C to 150°C
Power dissipation	1.5W

*Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Continuous operation of the device at the absolute rating level may affect device reliability. All voltages are referenced to device ground.*

## Typical Thermal Resistance

Package	$\theta_{ja}$
78-Ball LFGA	36°C/W

## Pin Configuration

78-Ball LFGA

## Product Marking

• HV2802LB	L = Lot Number
LLLLLLLLL	YY = Year Sealed
YYWW	WW = Week Sealed
AAA CCC	A = Assembler ID
	C = Country of Origin
	= "Green" Packaging

Package may or may not include the following marks: Si or 78-Ball LFGA

## Recommended Operating Conditions

Sym	Parameter	Value
$V_{DD}$	Logic power supply voltage	3.0V to 5.5V
$V_{PP}$	Positive high voltage supply	+40V to $V_{NN}$ +200V
$V_{NN}$	Negative high voltage supply	-40V to -160V
$V_{IH}$	High level input voltage	0.9 $V_{DD}$ to $V_{DD}$
$V_{IL}$	Low level input voltage	0V to 0.1 $V_{DD}$
$V_{SIG}$	Analog signal voltage peak-to-peak	$V_{NN}$ +10V to $V_{PP}$ -10V
$T_A$	Operating free air temperature	0°C to 70°C

Notes:

1. Power up/down sequence is arbitrary except GND must be powered-up first and powered-down last.
2.  $V_{SIG}$  must be  $V_{NN} \leq V_{SIG} \leq V_{PP}$  or floating during power up/down transition.
3. Rise and fall times of power supplies  $V_{DD}$ ,  $V_{PP}$  and  $V_{NN}$  should not be less than 1.0msec.

## DC Electrical Characteristics (Over recommended operating conditions unless otherwise specified)

Sym	Parameter	0°C		+25°C		+70°C		Unit	Conditions

X	X	X	X	X	X	X	H	L	HOLD PREVIOUS STATE							
X	X	X	X	X	X	X	X	H	ALL SWITCHES OFF							

## Notes:

1. The 32 switches operate independently.
2. Serial data is clocked in on the L to H transition of the CLK.
3. All 32 switches go to a state retaining their latched condition at the rising edge of  $\overline{LE}$ . When  $\overline{LE}$  is low the shift registers data flow through the latch.
4.  $D_{out}$  is high when data in the register 31 is high.
5. Shift registers clocking has no effect on the switch states if  $\overline{LE}$  is high.
6. The CLR clear input overrides all other inputs.

Электрон  
Связь**

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
