Description

The PI6C48535-01 is a high-performance low-skew LVPECL fanout buffer. PI6C48535-01 features two selectable single-ended clock inputs and translates to four LVPECL outputs. The CLK₀ and CLK₁ inputs accept LVCMS or LVTTL signals. The outputs are synchronized with input clock during asynchronous assertion/deassertion of CLK_EN pin. PI6C48535-01 is ideal for single-ended LVTTL/LVCMS to LVPECL translations. Typical clock translation and distribution applications are data-communications and telecommunications.
