THERMAL DERATE INFORMATION

Above curve is based on a minimum spacing between parts of 17mm for ED24X5 and 13mm for ED24x3. Maximum current @ 0mm spacing is 2.7A for ED24x5 and 2.3A for ED24x3 @ 40°C.

Derating Value: ED24x5 = 0.135A per mm
ED24x3 = 0.054A per mm

Derating based on Relay air gap:

Example: 10mm spacing with a ED24D5 SSR

- 1.- Subtract spacing from the minimum required spacing of the part (17mm) to get the correction value.
 $17-10=7$
- 2.- Multiply air gap derating value found above with correction value
 $0.135 \times 7 = 0.945A$

Now using this final number we can figure out what the maximum current the relay can carry with 10mm spacing @ 60°C Ambient.

- 3.- using the Ambient Derating Curve above find the current for the 5A model @ 60°C. In this case that value is 3A.
- 4.- Subtract the value above (0.945A) from 3A.
 $3-0.945 = 2.055A$

The maximum current you can switch with the ED24D5 with a 10mm air gap between relays @ 60°C ambient is 2.055A
