# INTRODUCTION

	MMS	MMT
50Ω	DC - 6 GHz	DC - 8 GHz
75Ω	DC - 1 GHz	

## GENERAL

- Low profile coaxial connectors
- Surface-mount receptacle (SMT)
- Fully compatible with automated pick and place machines
- Snap-on mating
- High RF performance
- 360° cable rotation

## APPLICATIONS

- Wireless base stations
- Satellite reception terminals (GPS...)
- Instrumentation
- Wireless datacom networks
- Automated payment systems
- Videocommunications
- Other general electronics

RADIALl has designed a complete range of microminiature coaxial connectors, dedicated to **Surface Technology (SMT)**.

Better than a simple SMT version of standard connector, **MMS** and **MMT** series were the first coaxial designed for SMT applications. Due to its optimized design, **MMS** and **MMT** range benefit from the following advantages:

- **Design adapted to automatic placement**

The asymmetric footprint of the **MMS** and **MMT** connectors allows video micro-positioning using the shadow to analyse its placement.

**MMS** and **MMT** connectors stand on three pliable legs. This design guarantees the receptacle stability placement. It allows it to absorb by elastic bending of the legs, the pressure of the positioning mechanism.

- **A geometry suited to automated picking**

The plain upper surface of **MMS** and **MMT** receptacle facilitates vacuum picking of the component automated distribution system. The geometry allows the use of numerous pneumatic nozzles with various diameters.

- **Optimization of soldering procedure**

**MMS** and **MMT** connectors materials used resist, without damage, the rapid elevation of temperature during the short time of the solder reflow in an infra-red oven.

- **Packaging**

The **MMS** and **MMT** connectors are packaged on tape and reels containing either 100, 500 or 3 000. The unit cavity geometry is designed for a perfect presentation of the component. The bottom of the cavity This hole facilitates the suction of the component, avoiding the adherence effect and allows the use of for a push rod.

- **360° cable rotation**

The **MMS** and **MMT** snap-on mating system ensures a correct positive connection each time and all connectors (plugs + receptacles) have a design which allows a 360° rotation of the pair when mated.

- **MMS vs MMT**

**MMS** and **MMT** connectors are dedicated to similar application.

Nevertheless the choice between these to standard will be driven by the following characteristics:

	MMS	MMT	Comment
Durability (mating cycle)	50	500	It is the main difference between these two series. MMS is dedicated to application which requires only few mating/unmating cycles. MMT provide stronger retention force while allowing more manipulation.
Frequency range	50Ω DC-6 GHz 75Ω DC-1 GHz	50Ω DC-8 GHz 75Ω DC-1 GHz	Both series are fully optimized for either wireless phone frequency range or mobile computing such as bluetooth, Wifi and Wimax.
Mated height	5.2 mm	6.8 mm

To ease PCB linking, this adapter is designed to remain mated to one designated PCB. Therefore, the slit interface is slide-on, the other is snap-on. This adapter can also be developed upon request with other lengths, in order to adjust space between PCB (minimum distance: 6.4 mm). Please consult us.

# RECEPTACLE PACKAGING

## ACCORDING TO IEC 286-3 STANDARD

### MATERIALS

Reel: polyester

Carrier tape: antistatic PETG (polyester)

Cover tape: polyester

Packaging	Dia. A
100 & 500	180
3000	330

## PRECAUTION FOR USE

Automated pick and place machines use standard tooling to peel the antistatic film off. Sometimes the "a" dimension of this tool is shorter than the overall "b" width between the two legs of the receptacle. There is thus a risk for the two legs being deformed while they pass through the tool during the suction operation. The user must then widen the "a" dimension of the peeling tool.

## GENERAL

- Subminiature coaxial connectors
- Push-pull" snap-on mating
- Complies with specification CECC 22000

## APPLICATIONS

- Wireless LANs
- PCMCIA cards
- RF test ports
- Base stations

MMCX series from Radiall combine intermatability with CECC 22000 compliant suppliers and high manufacturing quality. MMCX series is especially dedicated to wire to PCB connection where low space above the PCB is available (less than 2.1 mm). Due to Radiall manufacturing quality standard, our MMCX provide positive tactile feedback. MMCX series are adapted to high volume applications and Pick & Place manufacturing process.

## INTRODUCTION

RADIALL has developed a new MML series to address the market demand for smaller microminiature coaxial connectors for applications such as cell relay, WiFi access points, GPS and other mobile terminals. There are three types of plugs with mated heights of, H2.5, H2.0 and H1.5, as well as two types of vertical PCB receptacles with good electrical performance up to 6 GHz.

### FEATURES

- Two vertical PCB receptacles
  - MML H2.5 and MML H2.0
  - MML H1.5
- Space saving
  - Three mated heights 2.5 mm, 2.0 mm, 1.5 mm
  - PCB patterns 3.08 mm x 3 mm for H2.5 and H2.0, 2 mm x 2 mm for H1.5
- DC - 6GHz, typical VSWR 1.35 max
- Cable assemblies are offered with three high performance cables: 1.33 mm for MML H2.5, 1.13 mm for MML H2.0, 0.81 mm for MML H1.5

### APPLICATIONS

- Handhelds/GPS/WLAN
- GSM/CDMA/WCDMA/TD-SCDMA cards
