

High-Speed, CMOS, Quad, SPST Analog Switch

HI-201HS

General Description

Maxim's HI-201HS is a monolithic, CMOS, quad, single-pole-single-throw (SPST), high-speed analog switch featuring fast switching times (t_{OFF} , $t_{ON} \leq 50\text{ns}$) and low on resistance (50Ω max). It is pin compatible with the industry-standard DG201A.

Maxim's new high-voltage silicon-gate technology increases the maximum supply-voltage rating to 44V. This improvement allows continuous operation with $\pm 20\text{V}$ supplies, which is not permitted with the original manufacturer's devices. Maxim's HI-201HS operates from dual supplies ranging from $\pm 5\text{V}$ to $\pm 20\text{V}$, or from single supplies from +12V to +20V. Logic levels are TTL-/CMOS-compatible with single or dual supplies within these ranges.

Maxim's HI-201HS is guaranteed not to latch up if power supplies are disconnected while the analog-switch inputs are present, provided the switch continuous-current ratings are not exceeded. When powered up, the HI-201HS will switch analog signals up to the power-supply rails.

Applications

- Automatic Test Equipment (ATE)
- Heads-Up Displays
- Communication Systems
- Sample-and-Hold Circuits
- Military
- Integrator Reset Circuits

Functional Diagram

Features

- ◆ Guaranteed Single-Supply Operation: +12V to +20V
- ◆ Guaranteed Dual Supplies: $\pm 5\text{V}$ to $\pm 20\text{V}$
- ◆ Fast Switching Times:
 $t_{ON} = 30\text{ns}$
 $t_{OFF} = 40\text{ns}$
- ◆ Low, 50Ω Max On Resistance
- ◆ TTL-/CMOS-Compatible
- ◆ 44V Max Supply Rating

Ordering Information

PART	TEMP. RANGE	PIN-PACKAGE
HI3-0201HS-5	0°C to +70°C	16 Plastic DIP

Pin Configurations

High-Speed, CMOS, Quad, SPST Analog Switch

ABSOLUTE MAXIMUM RATINGS

Voltage Referenced to V-						
V+	44V					
GND	25V					
Digital Inputs VS, VD (Note 1)	(V+ - 4V) to (V+ + 4V) or 30mA (whichever occurs first)					
Current (any terminal, except S or D)	30mA					
Continuous Current, S or D	20mA					
Peak Current, S or D (pulsed at 1ms, 10% duty cycle max)	40mA					
Continuous Power Dissipation (TA = +70°C, Note 2)						
16-Pin DIP (derate 10.53mW/°C above +70°C)	842mW					
16-Pin Wide SO (derate 9.52mW/°C above +70°C)	762mW					
16-Pin CERDIP (derate 10.00mW/°C above +70°C)	800mW					
20-Pin LCC (derate 9.09mW/°C above +70°C)	727mW					
Operating Temperature Ranges:						
HI-0201HS-5/-6	0°C to +70°C					
HI-0201HS-9	-40°C to +85°C					
HI-0201HS-2/-8	-55°C to +125°C					
Storage Temperature Range	-65°C to +150°C					
Lead Temperature (soldering, 10sec)	+300°C					

Note 1: Signals on Sx, Dx, or INx exceeding V+ or V- are clamped by internal diodes. Limit forward current to maximum current ratings.

Note 2: All leads soldered or welded to PC board.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

(V+ = 15V, V- = -15V, GND = 0V, TA = +25°C, unless otherwise noted.)

Negative Supply Current	I ₋	All channels on or off	6		6		6	mA	

Note 3: The algebraic convention where the most negative value is a minimum and the most positive a maximum is used in this data sheet.

Note 4: Typical values are for DESIGN AID ONLY, not guaranteed or subject to production testing.

Note 5: Electrical characteristics, such as on resistance, will change when power supplies other than ±15V are used.

Note 6: I_{D(on)} is leakage from driver into on switch.

High-Speed, CMOS, Quad, SPST Analog Switch

Protecting Against Fault Conditions

Fault conditions occur when power supplies are turned off and input signals are still present, or when overvoltages occur at the inputs during normal operation. In either case, source-to-body diodes can be forward biased and conduct current from the signal source. If this current must be kept at low (μ A) levels, we recommend adding external protection diodes (Figure 1).

Figure 1. Protection Against Fault Conditions

To provide protection for overvoltages up to 20V above the supplies, place a 1N4001 or 1N914 type diode in series with the positive and negative supplies, as shown in Figure 1. Adding these diodes will reduce the analog-signal range to 1V below the positive supply and 1V above the negative supply.

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
