Single Event Effect (SEE) Characteristics:

Heavy Ion testing of the 2N7268 device was completed by similarity of die structure to the 2N7261. The 2N7261 has been characterized at the Texas A&M cyclotron. The following SOA curve has been established using the elements, LET, range, and Total Energy conditions as shown:

It should be noted that total energy levels are considered to be a factor in SEE characterization. Comparisons to other datasets should not be based on LET alone. Please consult factory for more information.
