

Data Sheet

ADG5408/ADG5409

FEATURES

- Latch-up proof**
- 8 kV human body model (HBM) ESD rating**
- Low on resistance ($13.5\ \Omega$)**
- $\pm 9\text{ V}$ to $\pm 22\text{ V}$ dual-supply operation**
- 9 V to 40 V single-supply operation**
- 48 V supply maximum ratings**
- Fully specified at $\pm 15\text{ V}$, $\pm 20\text{ V}$, +12 V, and +36 V**
- V_{SS} to V_{DD} analog signal range**

APPLICATIONS

- Relay replacement**
- Automatic test equipment**
- Data acquisition**
- Instrumentation**
- Avionics**
- Audio and video switching**
- Communication systems**

GENERAL DESCRIPTION

The ADG5408/ADG5409 are monolithic CMOS analog multiplexers comprising eight single channels and four differential channels, respectively. The ADG5408 switches one of eight inputs to a common output, as determined by the 3-bit binary address lines, A0, A1, and A2. The ADG5409 switches one of four differential inputs to a common differential output, as determined by the 2-bit binary address lines, A0 and A1.

An EN input on both devices enables or disables the device. When EN is disabled, all channels switch off. The on-resistance profile is very flat over the full analog input range, which ensures good linearity and low distortion when switching audio signals. High switching speed also makes the parts suitable for video signal switching.

Each switch conducts equally well in both directions when on, and each switch has an input signal range that extends to the power supplies. In the off condition, signal levels up to the supplies are blocked.

FUNCTIONAL BLOCK DIAGRAMS

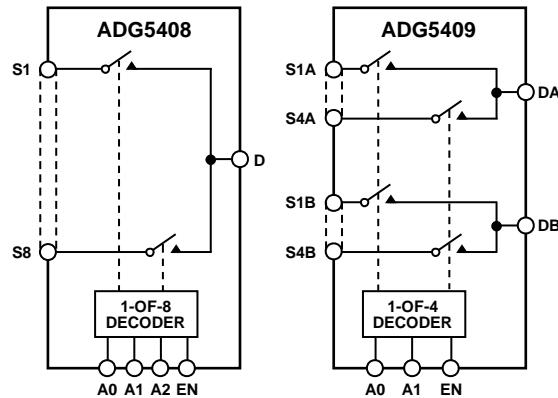

Figure 1.

09206-001

The ADG5408/ADG5409 do not have V_L pins; rather, the logic power supply is generated internally by an on-chip voltage generator.

PRODUCT HIGHLIGHTS

1. Trench isolation guards against latch-up. A dielectric trench separates the P and N channel transistors thereby preventing latch-up even under severe overvoltage conditions.
2. Low R_{ON} .
3. Dual-supply operation. For applications where the analog signal is bipolar, the ADG5408/ADG5409 can be operated from dual supplies up to $\pm 22\text{ V}$.
4. Single-supply operation. For applications where the analog signal is unipolar, the ADG5408/ADG5409 can be operated from a single rail power supply up to 40 V.
5. 3 V logic compatible digital inputs: $V_{INH} = 2.0\text{ V}$, $V_{INL} = 0.8\text{ V}$.
6. No V_L logic power supply required.

Rev. C

ABSOLUTE MAXIMUM RATINGS

T_A = 25°C, unless otherwise noted.

Table 7.

Parameter	Rating
V _{DD} to V _{SS}	48 V
V _{DD} to GND	-0.3 V to +48 V
V _{SS} to GND	+0.3 V to -48 V
Analog Inputs ¹	V _{SS} – 0.3 V to V _{DD} + 0.3 V or 30 mA, whichever occurs first
Digital Inputs ¹	V _{SS} – 0.3 V to V _{DD} + 0.3 V or 30 mA, whichever occurs first
Peak Current, Sx or D Pins ADG5408	435 mA (pulsed at 1 ms, 10% duty cycle maximum)
ADG5409	300 mA (pulsed at 1 ms, 10% duty cycle maximum)
Continuous Current, Sx or D ²	Data + 15%
Temperature Range Operating	-40°C to +125°C
Storage	-65°C to +150°C
Junction Temperature	150°C
Thermal Impedance, θ _{JA}	
16-Lead TSSOP (4-Layer Board)	112.6°C/W
16-Lead LFCSP (4-Layer Board)	30.4°C/W
Reflow Soldering Peak Temperature, Pb Free	As per JEDEC J-STD-020

¹ Overvoltages at the Ax, EN, Sx, and D pins are clamped by internal diodes.
Limit current to the maximum ratings given.

² See Table 5.

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Only one absolute maximum rating can be applied at any one time.

ESD CAUTION

ESD (electrostatic discharge) sensitive device.
Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

PIN CONFIGURATIONS AND FUNCTION DESCRIPTIONS

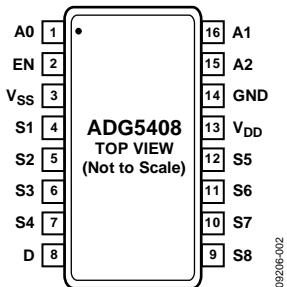

Figure 2. ADG5408 Pin Configuration (TSSOP)

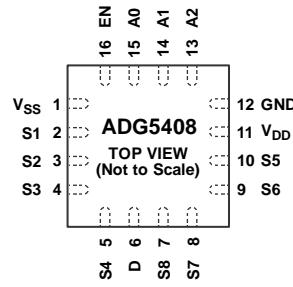

Figure 3. ADG5408 Pin Configuration (LFCSP)

Table 8. ADG5408 Pin Function Descriptions

Pin No.		Mnemonic	Description	
TSSOP	LFCSP			
1	15	A0	Logic Control Input.	
2	16	EN	Active High Digital Input. When low, the device is disabled and all switches are off. When high, Ax logic inputs determine on switches.	
3	1	V _{ss}	Most Negative Power Supply Potential. In single-supply applications, this pin can be connected to ground.	
4	2	S1	Source Terminal 1. This pin can be an input or an output.	
5	3	S2	Source Terminal 2. This pin can be an input or an output.	
6	4	S3	Source Terminal 3. This pin can be an input or an output.	
7	5	S4	Source Terminal 4. This pin can be an input or an output.	
8	6	D	Drain Terminal. This pin can be an input or an output.	
9	7	S8	Source Terminal 8. This pin can be an input or an output.	
10	8	S7	Source Terminal 7. This pin can be an input or an output.	
11	9	S6	Source Terminal 6. This pin can be an input or an output.	
12	10	S5	Source Terminal 5. This pin can be an input or an output.	
13	11	V _{dd}	Most Positive Power Supply Potential.	
14	12	GND	Ground (0 V) Reference.	
15	13	A2	Logic Control Input.	
16	14	A1	Logic Control Input.	
	EP	Exposed Pad	The exposed pad is connected internally. For increased reliability of the solder joints and maximum thermal capability, it is recommended that the pad be soldered to the substrate, V _{ss} .

TERMINOLOGY

I_{DD}

I_{DD} represents the positive supply current.

I_{SS}

I_{SS} represents the negative supply current.

V_D, V_S

V_D and V_S represent the analog voltage on Terminal D and Terminal S, respectively.

R_{ON}

R_{ON} is the ohmic resistance between Terminal D and Terminal S.

ΔR_{ON}

ΔR_{ON} represents the difference between the R_{ON} of any two channels.

R_{FLAT (ON)}

The difference between the maximum and minimum value of on resistance as measured over the specified analog signal range is represented by R_{FLAT (ON)}.

I_{S (Off)}

I_{S (Off)} is the source leakage current with the switch off.

I_{D (Off)}

I_{D (Off)} is the drain leakage current with the switch off.

I_{D (On)}, I_{S (On)}

I_{D (On)} and I_{S (On)} represent the channel leakage currents with the switch on.

V_{INL}

V_{INL} is the maximum input voltage for Logic 0.

V_{INH}

V_{INH} is the minimum input voltage for Logic 1.

I_{INL}, I_{INH}

I_{INL} and I_{INH} represent the low and high input currents of the digital inputs.

C_{D (Off)}

C_{D (Off)} represents the off switch drain capacitance, which is measured with reference to ground.

C_{S (Off)}

C_{S (Off)} represents the off switch source capacitance, which is measured with reference to ground.

C_{D (On)}, C_{S (On)}

C_{D (On)} and C_{S (On)} represent on switch capacitances, which are measured with reference to ground.

C_{IN}

C_{IN} represents digital input capacitance.

t_{ON (EN)}

t_{ON (EN)} represents the delay time between the 50% and 90% points of the digital input and switch on condition.

t_{OFF (EN)}

t_{OFF (EN)} represents the delay time between the 50% and 90% points of the digital input and switch off condition.

t_{TRANSITION}

Delay time between the 50% and 90% points of the digital inputs and the switch on condition when switching from one address state to another.

t_D

t_D represents the off time measured between the 80% point of both switches when switching from one address state to another.

Off Isolation

Off isolation is a measure of unwanted signal coupling through an off channel.

Charge Injection

Charge injection is a measure of the glitch impulse transferred from the digital input to the analog output during switching.

Crosstalk

Crosstalk is a measure of unwanted signal that is coupled through from one channel to another as a result of parasitic capacitance.

Bandwidth

Bandwidth is the frequency at which the output is attenuated by 3 dB.

On Response

On response is the frequency response of the on switch.

Total Harmonic Distortion + Noise (THD + N)

The ratio of the harmonic amplitude plus noise of the signal to the fundamental is represented by THD + N.

AC Power Supply Rejection Ratio (ACPSRR)

ACPSRR is a measure of the ability of a part to avoid coupling noise and spurious signals that appear on the supply voltage pin to the output of the switch. The dc voltage on the device is modulated by a sine wave of 0.62 V p-p. The ratio of the amplitude of signal on the output to the amplitude of the modulation is the ACPSRR.

TRENCH ISOLATION

In the ADG5408/ADG5409, an insulating oxide layer (trench) is placed between the NMOS and the PMOS transistors of each CMOS switch. Parasitic junctions, which occur between the transistors in junction isolated switches, are eliminated, and the result is a completely latch-up proof switch.

In junction isolation, the N and P wells of the PMOS and NMOS transistors form a diode that is reverse-biased under normal operation. However, during overvoltage conditions, this diode can become forward-biased. A silicon controlled rectifier (SCR) type circuit is formed by the two transistors causing a significant amplification of the current that, in turn, leads to latch-up. With trench isolation, this diode is removed, and the result is a latch-up proof switch.

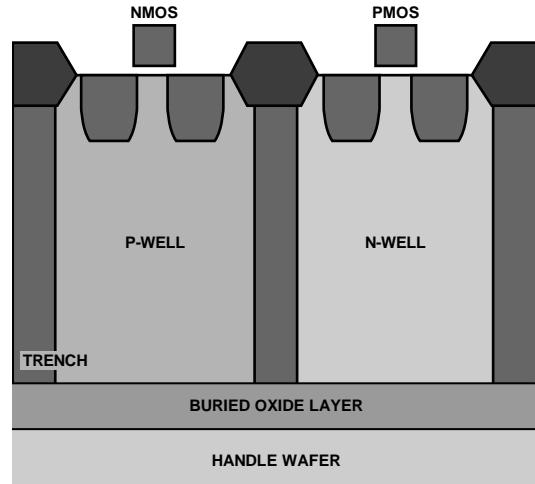

Figure 36. Trench Isolation

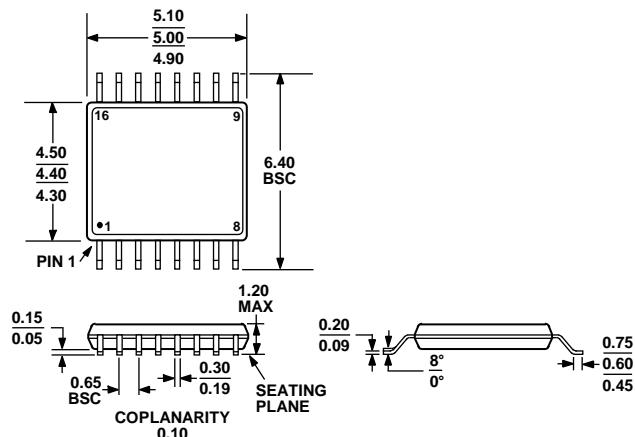

09206-016

APPLICATIONS INFORMATION

The ADG54xx family switches and multiplexers provide a robust solution for instrumentation, industrial, aerospace, and other harsh environments that are prone to latch-up, which is an undesirable high current state that can lead to device failure and persist until the power supply is turned off. The ADG5408/ADG5409 high voltage switches allow single-supply operation

from 9 V to 40 V and dual-supply operation from ± 9 V to ± 22 V. The ADG5408/ADG5409 (as well as select devices within the same family) achieve an 8 kV human body model ESD rating that provides a robust solution eliminating the need for separate protect circuitry designs in some applications.

NOTES

NOTES

**Стандарт
Электрон
Связь**

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
