SmartGLCD 240x128

Bac

Smart GLCD 240x128 represents development tool and final product specially designed for graphical applications which use PIC microcontroller PIC18F8722

TO OUR VALUED CUSTOMERS

I want to express my thanks to you for being interested in our products and for having confidence in Mikroelektronika.

The primary aim of our company is to design and produce high quality electronic products and to constantly improve the performance thereof in order to better suit your needs.

Introduction to SmartGLCD 240x128

The SmartGLCD 240x128 is a full-featured development tool for experimenting with **Graphical LCD** display. Main advantage of SmartGLCD is **resistive Touch Panel** which in combination with Graphical LCD display makes perfect tool for developing devices which can be used as control for home automation.

industrial equipment etc.

Microcontroller **PIC18F8722** is a heart of the SmartGLCD. It comes with preinstaled **bootloader** program so you don't need external programer for MCU programming. To utilize MCU pins SmartGLCD is equipped with marked pads. Spac

CAPS

Package contains

Key Features

- GLCD 240x128 display
- 02 RESET button
 - Power supply pads
- 04 I/O pads

01

- Pads for mikroProg programmer
- 06 USB connector
- 07 Touch panel connector
- 08 Microcontroler PIC18F8722
- 09 Contrast potentiometer
- 10 mcroSD card slot
- 11 USB UART module

System Specification

1. Connecting

power supply

Figure 1-1: Powering the development system

Connect the development system to a PC via a USB cable, Figure 1-1. The GLCD display will be automatically turned on.

2. PIC18F8722 Microcontroller

The **SmartGLCD** development tool comes with the **PIC18F8722** microcontroller. This 8-bit microcontroller with its integrated modules and in combination with other on-board modules is ideal for creating graphical applications..

Key microcontroller features

- Up to 10 MIPS Operation;
- 8-bit architecture;
- 128KB of Flash memory;
- 3,936 bytes of RAM memory;
- 1024 bytes of EEPROM
- 80 pin TQFP;
- 16 ch, 10-bit ADC;
- UART, SPI, ; etc.

3. Programming with bootloader

For programming, microcontroller use bootloader program which is preinstaled in to MCU memory. To transfer .hex file from a PC to MCU you need bootloader software (**mikroBootloader**) which can be downloaded from:

http://www.mikroe.com/eng/products/view/443/ smartglcd-240x128-board/

After software is downloaded unzip it to desired location and start mikroBootloader software.

- 0 mikroElektronika Bootloader v2.0.0.0 X mikroBootloader Select MCU PIC16 • Signals Tx Conn COM Port: COM1 Change Setup Settings Baud Rate: 9600 **History Window** 2 Connect with MCU Connect 3 Choose Browse for HEX Begin Δ Start bootloader uploading Bootloading Show Activity progress bar : No files opened.

note

If .hex file transfer from your PC to MCU is to slow you can try to speed-up data transfer by seting latency time of COM port to 1. To change latency time go to Device manager:

- 01 Right click on USB Serial Port (COM5) and click on Properties
- 02 In USB Serial Port (COM5) Properties select Port Settings tab
 - Click on Advanced... button

04 Set latency Timer to 1 (or chose another value) and click on OK button

4. Programing with

external programmer

Figure 4-1: Connecting external programmer

The microcontroller can be programmed with external programmer **mikroProg**. The external programmer is connected to the development system via marked pads CN3, Figure 4-1.

In order to connect the external programmer to the development system, it is necessary to provide a 1x5 header that should be soldered to pads CN3. If bootloader program is accidently erased you can upload it again via mikroProg programmer. Program **Bootloader18F8722.hex** can be found under Firmware folder (page 10).

mikroProg programmer can be also attached on the front side of the SmartGLCD. Just solder 1x5 header to pads CN3. This is ideal placment if you prefer using mikroProg instead of bootloader.

88888

SPac

CAPSI

Always use side with a knob of IDC connector for connecting with 1x5 header.

Figure 4-2: Connecting external programmer (GLCD side)

Page 17

5. Touch Screen

The development system features a **Graphical LCD 240x128 display** covered with a **resistive** touch panel. Together they form a functional unit called a touch screen. It enables data to be entered and displayed at the same time. The way of entering and displaying data depends on the program loaded into the microcontroller.

Resistive touch panel is suitable for usage with a plastic pen which have rounded tip. Finger press is always available but bare in mind that you use touch panel and there's no need for too much pressing force.

6. microSD Card Slot

Figure 6-1: microSD card inserted in SmartGLCD

Figure 6-2: Inserting microSD card There is a built-in microSD card slot for microSD cards provided on the development system. It enables the system to additionally expand available memory space. The Serial Peripheral Interface (SPI) is used for communication between the microcontroller and microSD card.

Polys

Figure 6-3: microSD card slot connecting schematic

7. USB UART

Development system can communicate with USB devices via USB UART module. This module comes in form of **FT232RL** chip which is interface between serial UART on MCU and USB device.

If you want to learn more about our products, please visit our website at www.mikroe.com If you are experiencing some problems with any of our products or just need additional information, please place your ticket at www.mikroe.com/en/support If you have any questions, comments or business proposals, do not hesitate to contact us at office@mikroe.com

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию.

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России, а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научноисследовательскими институтами России.

С нами вы становитесь еще успешнее!
