## GENERAL DESCRIPTION

The [ADG811/ADG812](#) are low voltage complementary metal-oxide semiconductor (CMOS) devices containing four independently selectable switches. These switches offer an ultralow on resistance of less than 0.8  $\Omega$  over the full temperature range. The digital inputs can handle 1.8 V logic with a 2.7 V to 3.6 V supply.

These devices contain four independent single-pole/single-throw (SPST) switches. The [ADG811](#) and [ADG812](#) differ only in that the digital control logic is inverted. The [ADG811](#) switches are turned on with a logic low on the appropriate control input, while a logic high is required to turn on the switches of the [ADG812](#). Each switch conducts equally well in both directions when on and has an input signal range that extends to the supplies.

### $V_{INH}$

Minimum input voltage for Logic 1.

### $I_{INL}$ ( $I_{INH}$ )

Input current of the digital input.

### $C_S$ (Off)

Off switch source capacitance. Measured with reference to ground.

### $C_D$ (Off)

Off switch drain capacitance. Measured with reference to ground.

### $C_D, C_S$ (On)

On switch capacitance. Measured with reference to ground.

### $C_{IN}$

Digital input capacitance.

### $t_{ON}$

Delay time between the 50% and the 90% points of the digital input and switch on condition.

### $t_{OFF}$

Delay time between the 50% and the 90% points of the digital input and switch off condition.

### $t_{BEM}$

On or off time measured between the 80% points of both switches, when switching from one to another.

### Charge Injection

A measure of the glitch impulse transferred from the digital input to the analog output during on-to-off switching.

### Off Isolation

A measure of unwanted signal coupling through an off switch.

### Crosstalk

A measure of unwanted signal that is coupled through from one channel to another because of parasitic capacitance.

### –3 dB Bandwidth

The frequency at which the output is attenuated by 3 dB.

### On Response

The frequency response of the on switch.

### Insertion Loss

The loss due to the on resistance of the switch.

### Total Harmonic Distortion Plus Noise (THD + N)

The ratio of the harmonic amplitudes plus the noise of a signal to the fundamental.
