| – | EP | – | The Exposed Pad (EP) on the QFN–16 package bottom is thermally connected to the die for improved heat transfer out of package. The exposed pad must be attached to a heat-sinking conduit. The pad is not electrically connected to the die but may be electrically and thermally connected to V_{EE} on the PC board. |

1. All V_{CC} and V_{EE} pins must be externally connected to Power Supply to guarantee proper operation. The thermally exposed pad on package bottom (see case drawing) must be attached to a heat-sinking conduit.
2. In the differential configuration when the input termination pins ($\overline{\text{VTCLK}}$, $\overline{\text{VTCLK}}$) are connected to a common termination voltage, and if no signal is applied then the device will be susceptible to self-oscillation.

23. Measured using a 500 mV source, 50% duty cycle clock source. All loading with $50\ \Omega$ to $V_{CC} - 2.0\text{ V}$ for QFN package. For minimum f_{max} value of 10.5 GHz, output amplitude is approximately 200 mV (as shown in Figure 3, where output P-P spec is shown as a minimum/guarantee of around 150 mV). Input edge rates 40 ps (20% – 80%).
