

## FEATURES

- High saturated output power ( $P_{SAT}$ ): 41.5 dBm typical
- High small signal gain: 35 dB typical
- High power gain for saturated output power: 25.5 dB typical
- Bandwidth: 2.7 GHz to 3.8 GHz
- High power added efficiency (PAE): 54% typical
- High output IP3: 44 dBm typical
- Supply voltage:  $V_{DD} = 28\text{ V}$  at 150 mA
- 32-lead, 5 mm × 5 mm LFCSP\_CAV package

## APPLICATIONS

- Extended battery operation for public mobile radios
- Power amplifier stage for wireless infrastructure
- Test and measurement equipment
- Commercial and military radars
- General-purpose transmitter amplification

## GENERAL DESCRIPTION

The [HMC1114](#) is a gallium nitride (GaN), broadband power amplifier, delivering 10 W with more than 50% power added efficiency (PAE) across a bandwidth of 2.7 GHz to 3.8 GHz. The [HMC1114](#) provides  $\pm 0.5$  dB gain flatness.

## FUNCTIONAL BLOCK DIAGRAM

Figure 1.

The [HMC1114](#) is ideal for pulsed or continuous wave (CW) applications such as wireless infrastructure, radar, public mobile radio, and general-purpose amplification.

The [HMC1114](#) is housed in a compact LFCSP\_CAV package.

## SPECIFICATIONS

### ELECTRICAL SPECIFICATIONS

$T_A = 25^\circ\text{C}$ ,  $V_{DD} = 28\text{ V}$ ,  $I_{DQ} = 150\text{ mA}$ , frequency range = 2.7 GHz to 3.2 GHz, unless otherwise noted.

Table 1.

Parameter	Symbol	Min	Typ	Max	Unit	Test Conditions/Comments
FREQUENCY RANGE		2.7		3.2	GHz	
GAIN						
Small Signal Gain		32	35		dB	
Gain Flatness			$\pm 0.5$		dB	
Power Gain for 4 dB Compression			29		dB	
Power Gain for Saturated Output Power			25.5		dB	Measurement taken at $P_{IN} = 16\text{ dBm}$
RETURN LOSS						
Input			14		dB	
Output			11		dB	
POWER						
Output Power for 4 dB Compression	P4dB		39		dBm	
Saturated Output Power	$P_{SAT}$		41.5		dBm	Measurement taken at $P_{IN} = 16\text{ dBm}$
Power Added Efficiency	PAE		54		%	
OUTPUT THIRD-ORDER INTERCEPT	IP3		44			Measurement taken at $P_{OUT}/\text{tone} = 30\text{ dBm}$
TARGET QUIESCENT CURRENT	$I_{DQ}$		150		mA	Adjust the gate control voltage ( $V_{GG1}$ , $V_{GG2}$ ) between $-8\text{ V}$ and $0\text{ V}$ to achieve an $I_{DQ} = 150\text{ mA}$ typical

$T_A = 25^\circ\text{C}$ ,  $V_{DD} = 28\text{ V}$ ,  $I_{DQ} = 150\text{ mA}$ , frequency range = 3.2 GHz to 3.8 GHz, unless otherwise noted.

Table 2.

Parameter	Symbol	Min	Typ	Max	Unit	Test Conditions/Comments
FREQUENCY RANGE		3.2		3.8	GHz	
GAIN						
Small Signal Gain		29	32		dB	
Gain Flatness			$\pm 1$		dB	
Power Gain for 4 dB Compression			28		dB	
Power Gain for Saturated Output Power			25		dB	Measurement taken at $P_{IN} = 16\text{ dBm}$
RETURN LOSS						
Input			25		dB	
Output			9		dB	
POWER						
Output Power for 4 dB Compression	P4dB		40		dBm	
Saturated Output Power	$P_{SAT}$		40.5		dBm	Measurement taken at $P_{IN} = 16\text{ dBm}$
Power Added Efficiency	PAE		53		%	
OUTPUT THIRD-ORDER INTERCEPT	IP3		44			Measurement taken at $P_{OUT}/\text{tone} = 30\text{ dBm}$
TARGET QUIESCENT CURRENT	$I_{DQ}$		150		mA	Adjust the gate control voltage ( $V_{GG1}$ , $V_{GG2}$ ) between $-8\text{ V}$ and $0\text{ V}$ to achieve an $I_{DQ} = 150\text{ mA}$ typical

### TOTAL SUPPLY CURRENT BY $V_{DD}$

Table 3.

Parameter	Symbol	Min	Typ	Max	Unit	Test Conditions/Comments
SUPPLY CURRENT	$I_{DQ}$					Adjust $V_{GG1}$ , $V_{GG2}$ to achieve an $I_{DQ} = 150\text{ mA}$ typical
$V_{DD} = 25\text{ V}$			150		mA	
$V_{DD} = 28\text{ V}$			150		mA	
$V_{DD} = 32\text{ V}$			150		mA	

## ABSOLUTE MAXIMUM RATINGS

Table 4.

Parameter	Rating
Drain Bias Voltage ( $V_{DD1}$ , $V_{DD2}$ )	35 V dc
Gate Bias Voltage ( $V_{GG1}$ , $V_{GG2}$ )	-8 V to 0 V dc
RF Input Power (RFIN)	30 dBm
Maximum Forward Gate Current	4 mA
Continuous Power Dissipation, $P_{DISS}$ ( $T_A = 85^\circ\text{C}$ , Derate 227 mW/ $^\circ\text{C}$ Above 120 $^\circ\text{C}$ )	24 W
Thermal Resistance, Junction to Back of Paddle Channel Temperature	4.4 $^\circ\text{C}/\text{W}$ 225 $^\circ\text{C}$
Maximum Peak Reflow Temperature (MSL3) <sup>1</sup>	260 $^\circ\text{C}$
Storage Temperature Range	-40 $^\circ\text{C}$ to +125 $^\circ\text{C}$
Operating Temperature Range	-40 $^\circ\text{C}$ to +85 $^\circ\text{C}$
ESD Sensitivity (Human Body Model)	Class 1A, passed 250 V

<sup>1</sup> See the Ordering Guide section.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

### ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

# PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

NOTES  
 1. EXPOSED PAD. EXPOSED PAD MUST BE CONNECTED TO RF/DC GROUND.

13530-002

Figure 2. Pin Configuration

Table 5. Pin Function Descriptions

Pin No.	Mnemonic	Description
1 to 3, 6 to 9, 11, 12, 14 to 19, 22 to 25, 28, 29, 31, 32	GND	Ground. These pins and the package bottom (EPAD) must be connected to RF/dc ground. See Figure 3 for the GND interface schematic.
4, 5	RFIN	RF Input. These pins are dc-coupled and matched to 50 Ω. See Figure 4 for the RFIN interface schematic.
10, 13	V <sub>GG1</sub> , V <sub>GG2</sub>	Gate Control Voltage Pins. External bypass capacitors of 1 μF and 10 μF are required. See Figure 5 for the V <sub>GG1</sub> and V <sub>GG2</sub> interface schematic.
20, 21	RFOUT	RF Output. These pins are ac-coupled and matched to 50 Ω. See Figure 6 for the RFOUT interface schematic.
26, 27, 30	V <sub>DD1</sub> , V <sub>DD2</sub>	Drain Bias Pins for the Amplifier. External bypass capacitors of 100 pF, 1 μF, and 10 μF are required. See Figure 7 for the V <sub>DD1</sub> and V <sub>DD2</sub> interface schematic.
	EPAD	Exposed Pad. The exposed pad must be connected to RF/dc ground.

## THEORY OF OPERATION

The [HMC1114](#) is a 10 W, gallium nitride (GaN), power amplifier that consists of two gain stages in series, and the basic block diagram for the amplifier is shown in Figure 40.

Figure 40. Basic Block Diagram

The recommended dc bias conditions put the device in deep Class AB operation, resulting in high  $P_{SAT}$  (41.5 dBm typical) at improved levels of PAE (54% typical). The voltage applied to the  $V_{GG1}$  and  $V_{GG2}$  pads sets the gate bias of the field effect transistors (FETs), providing control of the drain current. For this reason, the application of a bias voltage to the  $V_{GG1}$  and  $V_{GG2}$  pads is required and not optional.

The [HMC1114](#) has single-ended input and output ports whose impedances are nominally equal to  $50\ \Omega$  over the 2.7 GHz to 3.8 GHz frequency range. Consequently, it can directly insert into a  $50\ \Omega$  system with no required impedance matching circuitry, which also means that multiple [HMC1114](#) amplifiers can be cascaded back to back without the need for external matching circuitry. The input and output impedances are sufficiently stable vs. variations in temperature and supply voltage that no impedance matching compensation is required.

Note that it is critical to supply very low inductance ground connections to the GND pins and the package base exposed pad to ensure stable operation. To achieve optimal performance from the [HMC1114](#) and prevent damage to the device, do not exceed the absolute maximum ratings.

## APPLICATIONS INFORMATION

Figure 41 shows the basic connections for operating the HMC1114. The RFIN port is dc-coupled. An appropriate valued external dc block capacitor is required at RFIN port. The RFOUT port has on-chip dc block capacitors that eliminate the need for external ac coupling capacitors.

### RECOMMENDED BIAS SEQUENCE

#### During Power-Up

The recommended bias sequence during power-up is the following:

1. Connect to ground.
2. Set  $V_{GG1}$  and  $V_{GG2}$  to  $-8$  V.
3. Set  $V_{DD1}$  and  $V_{DD2}$  to 28 V.
4. Increase  $V_{GG1}$  and  $V_{GG2}$  to achieve a typical  $I_{DQ} = 150$  mA.
5. Apply the RF signal.

#### During Power-Down

The recommended bias sequence during power-down is the following:

1. Turn off the RF signal.
2. Decrease  $V_{GG1}$  to  $-8$  V to achieve a typical  $I_{DQ} = 0$  mA.
3. Decrease  $V_{DD1}$  and  $V_{DD2}$  to 0 V.
4. Increase  $V_{GG1}$  to 0 V.

Unless otherwise noted, all measurements and data shown were taken using the typical application circuit (see Figure 41) on the evaluation board (see Figure 42) and biased per the conditions in the Recommended Bias Sequence section. The  $V_{DD1}$  and two  $V_{DD2}$  pins are connected together. Similarly, the  $V_{GG1}$  and  $V_{GG2}$  pins are also connected together. The bias conditions shown in the Recommended Bias Sequence section are the operating points recommended to optimize the overall performance. Operation using other bias conditions may provide performance that differs from what is in Table 1 and Table 2. Increasing the  $V_{DD1}$  and  $V_{DD2}$  levels typically increase gain and  $P_{SAT}$  at the expense of power consumption. This behavior is seen in the Typical Performance Characteristics section. For applications where the  $P_{SAT}$  requirement is not stringent, reduce the  $V_{DD1}$  and the  $V_{DD2}$  of the HMC1114 to improve power consumption. To obtain the best performance while not damaging the device, follow the recommended biasing sequence outlined in the Recommended Bias Sequence section.

### EVALUATION PRINTED CIRCUIT BOARD (PCB)

The [EV1HMC1114LP5D](#) (600-01209-00) evaluation PCB is shown in Figure 42.

#### BILL OF MATERIALS

Use RF circuit design techniques for the circuit board used in the application. Provide 50 Ω impedance for the signal lines and

directly connect the package ground leads and exposed paddle to the ground plane, similar to that shown in Figure 42. Use a sufficient number of via holes to connect the top and bottom ground planes. The evaluation PCB shown in Figure 42 is available from Analog Devices, Inc., upon request.

EV1HMC1114LP5D			Evaluation Board		

<sup>1</sup> The HMC1114LP5DE and the HMC1114LP5DETR are LFCSP premolded copper alloy lead frame and RoHS Compliant Parts.  
<sup>2</sup> When ordering the evaluation board only, reference the EV1HMC1114LP5D model number.  
<sup>3</sup> See the Absolute Maximum Ratings section for additional information.  
<sup>4</sup> The lead finish of the HMC1114LP5DE and HMC1114LP5DETR are nickel palladium gold (NiPdAu).  
<sup>5</sup> The HMC1114LP5DE and HMC1114LP5DETR four-digit lot number is represented by XXXX.

## Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
