

# MSP430 Hardware Tools

## User's Guide

Literature Number: SLAU278F  
May 2009–Revised December 2010

<b>Preface</b> .....	<b>9</b>
<b>1 Get Started Now!</b> .....	<b>13</b>
1.1 Flash Emulation Tool (FET) Overview .....	14
1.2 Kit Contents, MSP-FET430PIF .....	14
1.3 Kit Contents, eZ430-F2013 .....	14
1.4 Kit Contents, eZ430-T2012 .....	14
1.5 Kit Contents, eZ430-RF2500 .....	15
1.6 Kit Contents, eZ430-RF2500T .....	15
1.7 Kit Contents, eZ430-RF2500-SEH .....	15
1.8 Kit Contents, eZ430-Chronos-xxx .....	15
1.9 Kit Contents, MSP-FET430UIF .....	15
1.10 Kit Contents, MSP-FET430xx .....	16
1.11 Kit Contents, FET430Fx137RF900 .....	17
1.12 Kit Contents, MSP-TS430xx .....	17
1.13 Kit Contents, EM430Fx137RF900 .....	19
1.14 Hardware Installation, MSP-FET430PIF .....	19
1.15 Hardware Installation, MSP-FET430UIF .....	20
1.16 Hardware Installation, eZ430-F2013, eZ430-RF2500, eZ430-Chronos .....	20
1.17 Hardware Installation, MSP-FET430Uxx, MSP-TS430xxx, FET430Fx137RF900, EM430Fx137RF900 .....	20
1.18 Important MSP430 Documents on the CD-ROM and Web .....	21
<b>2 Design Considerations for In-Circuit Programming</b> .....	<b>23</b>
2.1 Signal Connections for In-System Programming and Debugging .....	24
2.2 External Power .....	27
2.3 Bootstrap Loader (BSL) .....	27
<b>A Frequently Asked Questions and Known Issues</b> .....	<b>29</b>
A.1 Hardware FAQs .....	30
A.2 Known Issues .....	32
<b>B Hardware</b> .....	<b>33</b>
B.1 MSP-TS430PW14 .....	34
B.2 MSP-TS430L092 .....	37
B.3 MSP-TS430L092 Active Cable .....	40
B.4 MSP-TS430PW24 .....	43
B.5 MSP-TS430DW28 .....	46
B.6 MSP-TS430PW28 .....	49
B.7 MSP-TS430PW28A .....	52
B.8 MSP-TS430DA38 .....	55
B.9 MSP-TS430QFN23x0 .....	58
B.10 MSP-TS430RSB40 .....	61

### About This Manual

This manual describes the hardware of the Texas Instruments MSP-FET430 Flash Emulation Tool (FET). The FET is the program development tool for the MSP430 ultra-low-power microcontroller. Both available interface types, the parallel port interface and the USB interface, are described.

### How to Use This Manual

Read and follow the instructions in [Chapter 1](#). This chapter lists the contents of the FET, provides instructions on installing the hardware and according software drivers. After you see how quick and easy it is to use the development tools, TI recommends that you read all of this manual.

This manual describes the setup and operation of the FET but does not fully describe the MSP430™ microcontrollers or the development software systems. For details of these items, see the appropriate TI documents listed in [Section 1.18](#).

This manual applies to the following tools (and devices):

- MSP-FET430PIF (debug interface with parallel port connection, for all MSP430 flash-based devices)
- MSP-FET430UIF (debug interface with USB connection, for all MSP430 flash-based devices)
- eZ430-F2013 (USB stick form factor interface with attached MSP430F2013 target, for all MSP430F20xx, MSP430G2x01, MSP430G2x11, MSP430G2x21 and MSP430G2x31 devices)
- eZ430-T2012 (three MSP430F2012 based target boards)
- eZ430-RF2500 (USB stick form factor interface with attached MSP430F2274/CC2500 target, for all MSP430F20xx, MSP430F21x2, MSP430F22xx, MSP430G2x01, MSP430G2x11, MSP430G2x21 and MSP430G2x31 devices)
- eZ430-RF2500T (one MSP430F2274/CC2500 target board including battery pack)
- eZ430-RF2500-SEH (USB stick form factor interface with attached MSP430F2274/CC2500 target and solar energy harvesting module)
- eZ430-Chronos-xxx (USB stick form factor interface with CC430F6137 based development system contained in a watch. Includes <1 GHz RF USB access point)

The following tools contain the USB debug interface (MSP-FET430UIF) and the respective target socket module:

- MSP-FET430U14 (for MSP430F20xx, MSP430F20xx, MSP430G2x01, MSP430G2x11, MSP430G2x21 and MSP430G2x31 devices in 14-pin PW packages)
- MSP-FET430U092 (for MSP430FL092 devices in 14-pin PW packages)
- MSP-FET430U24 (for MSP430AFE2xx devices in 24-pin PW packages)
- MSP-FET430U28 (for MSP430F11xx(A) devices in 20- and 28-pin DW or PW packages)
- MSP-FET430U28A (for MSP430F20xx and MSP430G2xxx devices in 14-, 20-, and 28-pin PW)
- MSP-FET430U38 (for MSP430F22x2 and MSP430F22x4 devices in 38-pin DA packages)
- MSP-FET430U23x0 (for MSP430F23x0 devices in 40-pin RHA packages)
- MSP-FET430U40 (for MSP430F51x1, MSP430F51x2 devices in 40-pin RSB packages)
- MSP-FET430U40A (for MSP430FR572x, MSP430FR573x devices in 40-pin RHA packages)
- MSP-FET430U48 (for MSP430F22x2 and MSP430F22x4 devices in 48-pin DL packages)
- MSP-FET430U48B (for MSP430F534x devices in 48-pin RGZ packages)
- MSP-FET430U64 (for MSP430F13x, MSP430F14x, MSP430F14x1, MSP430F15x, MSP430F16x(1), MSP430F23x, MSP430F24x, MSP430F24xx, MSP430F261x, MSP430F41x, MSP430F42x(A), MSP430FE42x(A), MSP430FE42x2, and MSP430FW42x devices in 64-pin PM packages)
- MSP-FET430U64A (for MSP430F41x2 devices in 64-pin PM packages)
- MSP-FET430U64B (for MSP430F530x devices in 64-pin RGC packages)
- MSP-FET430U64USB (for MSP430F550x, MSP430F551x, MSP430552x, devices in 64-pin RGC packages)
- MSP-FET430U80 (for MSP430F241x, MSP430F261x, MSP430F43x, MSP430F43x1, MSP430FG43x, MSP430F47x, and MSP430FG47x devices in 80-pin PN packages)
- MSP-FET430U80A (for MSP430F532x devices in 80-pin PN packages)
- MSP-FET430U80USB (for MSP430F552x devices with USB peripheral in 80-pin PN packages)
- MSP-FET430U100 (for MSP430F43x, MSP430F43x1, MSP430F44x, MSP430FG461x, and MSP430F47xx devices in 100-pin PZ packages)
- MSP-FET430U100A (for MSP430F471xx devices in 100-pin PZ packages - red PCB)
- MSP-FET430U5x100 (for MSP430F54xx(A) devices and the MSP430BT5190 in 100-pin PZ packages)
- MSP-FET430U100USB (for MSP430F663x and MSP430F563x devices in 100-pin PZ packages)
- FET430F5137RF900 (for CC430F513x devices in 48-pin RGZ packages)
- FET430F6137RF900 (for CC430F612x and CC430F613x devices in 64-pin RGC packages)

Stand-alone target-socket modules (without debug interface):

- MSP-TS430PW14 (for MSP430F20xx, MSP430G2x01, MSP430G2x11, MSP430G2x21 and MSP430G2x31 devices in 14-pin PW packages)
- MSP-TS430L092 (for MSP430FL092 devices in 14-pin PW packages)
- MSP-TS430PW24 (for MSP430AFE2xx devices in 24-pin PW packages)
- MSP-TS430DW28 (for MSP430F11xx(A) devices in 28-in DW packages)
- MSP-TS430PW28 (for MSP430F11xx(A) devices in 28-in PW packages)
- MSP-TS430PW28A (for MSP430F20xx and MSP430G2xxx devices in 14, 20 and 28-pin PW)
- MSP-TS430DA38 (for MSP430F22x2 and MSP430F22x4 devices in 38-pin DA packages)
- MSP-TS430QFN23x0 (for MSP430F23x0 devices in 40-pin RHA packages)
- MSP-TS430RSB40 (for MSP430F51x1, MSP430F51x2 devices in 40-pin RSB packages)
- MSP-TS430RHA40A ((for MSP430FR572x, MSP430FR573x devices in 40-pin RHA packages)
- MSP-TS430DL48 (for MSP430F22x2 and MSP430F22x4 devices in 48-pin DL packages)
- MSP-TS430RGZ48B (for MSP430F534x devices in 48-pin RGZ packages)
- MSP-TS430PM64 (for MSP430F13x, MSP430F14x, MSP430F14x1, MSP430F15x, MSP430F16x(1), MSP430F23x, MSP430F24x, MSP430F24xx, MSP430F261x, MSP430F41x, MSP430F42x(A), MSP430FE42x(A), MSP430FE42x2, and MSP430FW42x devices in 64-pin PM packages)
- MSP-TS430PM64A (for MSP430F41x2 devices in 64-pin PM packages)

- MSP-TS430RGC64B (for MSP430F530x devices in 64-pin RGC packages)
- MSP-TS430RGC64USB (for MSP430F550x, MSP430F551x, MSP430552x, devices in 64-pin RGC packages)
- MSP-TS430PN80 (for MSP430F241x, MSP430F261x, MSP430F43x, MSP430F43x1, MSP430FG43x, MSP430F47x, and MSP430FG47x devices in 80-pin PN packages)
- MSP-TS430PN80A (for MSP430F532x devices in 80-pin PN packages)
- MSP-TS430PN80USB (for MSP430F552x devices with USB peripheral in 80-pin PN packages)
- MSP-TS430PZ100 (for MSP430F43x, MSP430F43x1, MSP430F44x, MSP430FG461x, and MSP430F47xx devices in 100-pin PZ packages)
- MSP-TS430PZ100A (for MSP430F471xx devices in 100-pin PZ packages — red PCB)
- MSP-TS430PZ5x100 (for MSP430F54xx(A) and the MSP430BT5190 devices in 100-pin PZ packages)
- MSP-TS430PZ100USB (for MSP430F663x and MSP430F563x devices in 100-pin PZ packages)
- EM430F5137RF900 (with integrated CC430F5137 IC in a 48-pin RGZ package)
- EM430F6137RF900 (with integrated CC430F6137 IC in a 64-pin RGC package)

These tools contain the most up-to-date materials available at the time of packaging. For the latest materials (data sheets, user's guides, software, application information, etc.), visit the TI MSP430 web site at [www.ti.com/msp430](http://www.ti.com/msp430) or contact your local TI sales office.

## Information About Cautions and Warnings

This document may contain cautions and warnings.

### CAUTION

This is an example of a caution statement.

A caution statement describes a situation that could potentially damage your software or equipment.

### WARNING

**This is an example of a warning statement.**

**A warning statement describes a situation that could potentially cause harm to you.**

The information in a caution or a warning is provided for your protection. Read each caution and warning carefully.

## If You Need Assistance

Support for the MSP430 devices and the FET development tools is provided by the Texas Instruments Product Information Center (PIC). Contact information for the PIC can be found on the TI web site at [www.ti.com/support](http://www.ti.com/support). The Texas Instruments [E2E Community support forums](#) for the [MSP430](#) provide open interaction with peer engineers, TI engineers, and other experts. Additional device-specific information can be found on the [MSP430 web site](#).

## FCC Warning

This equipment is intended for use in a laboratory test environment only. It generates, uses, and can radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to subpart J of part 15 of FCC rules, which are designed to provide reasonable protection against radio-frequency interference. Operation of this equipment in other environments may cause interference with radio communications, in which case, the user is required to take whatever measures may be required to correct this interference at his own expense.

## Get Started Now!

This chapter lists the contents of the FET and provides instruction on installing the hardware.

## 1.1 Flash Emulation Tool (FET) Overview

TI offers several flash emulation tools according to different requirements.

**Table 1-1. Flash Emulation Tool (FET) Features**

	eZ430-F2013	eZ430-RF2500	eZ430-Chronos	MSP-FET430UIF	MSP-FET430PIF
Supports all MSP430 and CC430 flash-based devices ('F1xx, 'F2xx, 'F4xx, 'F5xx, 'F6xx, 'G2xx, 'L092)				X	X
Supports only 'F20xx, 'G2x01, 'G2x11, 'G2x21, 'G2x31	X				
Supports only MSP430F20xx, 'F21x2, 'F22xx, 'G2x01, 'G2x11, 'G2x21, 'G2x31		X			
Supports only CC430F51xx, 'F61xx, MSP430F20xx, 'F21x2, 'F22xx, 'F41x2, 'F54xx, 'F54xxA, 'F55xx			X		
Allows fuse blow				X	
Adjustable target supply voltage				X	
Fixed 2.8-V target supply voltage					X
Fixed 3.6-V target supply voltage	X	X	X		
4-wire JTAG				X	X
2-wire JTAG <sup>(1)</sup>	X	X	X	X	
Application UART		X	X		
Supported by CCE	X	X		X	X
Supported by CCS	X	X	X	X	X <sup>(2)</sup>
Supported by IAR	X	X	X	X	X

<sup>(1)</sup> The 2-wire JTAG debug interface is also referred to as Spy-Bi-Wire (SBW) interface.

<sup>(2)</sup> Not supported by default. Driver installation needs to be selected manually during the CCS installation process.

### 1.2 Kit Contents, MSP-FET430PIF

- One READ ME FIRST document
- One MSP430 CD-ROM
- One MSP-FET430PIF interface module
- One 25-conductor cable
- One 14-conductor cable

### 1.3 Kit Contents, eZ430-F2013

- One QUICK START GUIDE document
- One eZ430-F2013 CD-ROM
- One eZ430-F2013 development tool including one MSP430F2013 target board

### 1.4 Kit Contents, eZ430-T2012

- Three MSP430F2012-based target boards

**1.5 Kit Contents, eZ430-RF2500**

- One QUICK START GUIDE document
- One eZ430-RF2500 CD-ROM
- One eZ430-RF2500 development tool including one MSP430F2274/CC2500 target board
- One eZ430-RF2500T target board
- One AAA battery pack with expansion board (batteries included)

**1.6 Kit Contents, eZ430-RF2500T**

- One eZ430-RF2500T target board
- One AAA battery pack with expansion board (batteries included)

**1.7 Kit Contents, eZ430-RF2500-SEH**

- One MSP430 development tool CD containing documentation and development software
- One eZ430-RF USB debugging interface
- Two eZ430-RF2500T wireless target boards
- One SEH-01 solar energy harvester board
- One AAA battery pack with expansion board (batteries included)

**1.8 Kit Contents, eZ430-Chronos-xxx****'433, '868, '915**

- One QUICK START GUIDE document
- One eZ430-Chronos CD-ROM
- One eZ430-Chronos emulator
- One screwdriver
- Two spare screws

**eZ430-Chronos-433:**

- One 433-MHz eZ430-Chronos watch (battery included)
- One 433-MHz eZ430-Chronos access point

**eZ430-Chronos-868:**

- One 868-MHz eZ430-Chronos watch (battery included)
- One 868-MHz eZ430-Chronos access point

**eZ430-Chronos-915:**

- One 915-MHz eZ430-Chronos watch (battery included)
- One 915-MHz eZ430-Chronos access point

**1.9 Kit Contents, MSP-FET430UIF**

- One READ ME FIRST document
- One MSP430 CD-ROM
- One MSP-FET430UIF interface module
- One USB cable
- One 14-conductor cable

## 1.10 Kit Contents, MSP-FET430xx

'U14, 'U092, 'U24, 'U28, 'U28A, 'U38, 'U23x0, 'U40, 'U40A, 'U48, 'U48B, 'U64, 'U64A, 'U64USB, 'U80, 'U80USB, 'U100, 'U100A, 'U100B, 'U5x100, 'U100USB

- One READ ME FIRST document
- One MSP430 CD-ROM
- One MSP-FET430UIF USB interface module. This is the unit that has a USB B-connector on one end of the case, and a 2x7-pin male connector on the other end of the case.
- One USB cable
- One 32.768-kHz crystal from Micro Crystal (except MSP-FET430U24)
- A 2x7-pin male JTAG connector is also present on the PCB (see different setup for L092)
- One 14-Pin JTAG conductor cable
- One small box containing two MSP430 device samples (See table for Sample Type)
- One target socket module. To check the devices used for each board and a summary of the board, see [Table 1-2](#). MSP-TS430xx below is the target socket module for each MSP-FET430Uxx kit.

**MSP-FET430U14:** One **MSP-TS430PW14** target socket module.

**MSP-FET430U092:** One **MSP-TS430L092** target socket module with Active Cable.

**MSP-FET430U24:** One **MSP-TS430PW24** target socket module.

**MSP-FET430U28:** One **MSP-TS430PW28** target socket module.

**MSP-FET430U28A:** One **MSP-TS430PW28A** target socket module.

**MSP-FET430U38:** One **MSP-TS430DA38** target socket module..

**MSP-FET430U23x0:** One **MSP-TS430QFN23x0** (former name MSP-TS430QFN40) target socket module.

**MSP-FET430U40:** One **MSP-TS430RSB40** target socket module.

**MSP-FET430U48:** One **MSP-TS430DL48** target socket module.

**MSP-FET430U48B:** One **MSP-TS430RGZ48B** target socket module.

**MSP-FET430U64:** One **MSP-TS430PM64** target socket module.

**MSP-FET430U64A:** One **MSP-TS430PM64A** target socket module.

**MSP-FET430U64B:** One **MSP-TS430RGC64B** target socket module.

**MSP-FET430U64USB:** One **MSP-TS430RGC64USB** target socket module.

**MSP-FET430U80:** One **MSP-TS430PN80** target socket module.

**MSP-FET430U80A:** One **MSP-TS430PN80A** target socket module.

**MSP-FET430U80USB:** One **MSP-TS430PN80USB** target socket module.

**MSP-FET430U100:** One **MSP-TS430PZ100** target socket module.

**MSP-FET430U100A:** One **MSP-TS430PZ100A** target socket module

**MSP-FET430U100B:** One **MSP-TS430PZ100B** target socket module

**MSP-FET430U5x100:** One **MSP-TS430PZ5x100** target socket module.

**MSP-FET430U100USB:** One **MSP-TS430PZ100USB** target socket module.

Consult the device data sheets for device specifications. Device errata can be found in the respective device product folder on the web provided as a PDF document. Depending on the device, errata may also be found in the device bug database at [www.ti.com/sc/cgi-bin/buglist.cgi](http://www.ti.com/sc/cgi-bin/buglist.cgi).

### 1.11 Kit Contents, FET430Fx137RF900

- One READ ME FIRST document
- One legal notice
- One MSP430 CD-ROM
- One MSP-FET430UIF interface module
- Two target socket module

**MSP-FET430F5137RF900:** Two EM430F5137RF900 target socket modules. This is the PCB on which is soldered a CC430F5137 device in a 48-pin RGZ package. A 2x7-pin male connector is also present on the PCB

**MSP-FET430F6137RF900:** Two EM430F6137RF900 target socket modules. This is the PCB on which is soldered a CC430F6137 device in a 64-pin RGC package. A 2x7-pin male connector is also present on the PCB

- Two CC430EM battery packs
- Four AAA batteries
- Two 868-/915-MHz antennas
- Two 32.768-kHz crystals
- 18 PCB 2x4-pin headers
- One USB cable
- One 14-Pin JTAG conductor cable

### 1.12 Kit Contents, MSP-TS430xx

'PW14, 'L092, 'PW24, 'DW28, 'PW28, 'PW28A, 'DA38, 'QFN32x0, 'RSB40, 'DL48, 'RGZ48B, 'PM64, 'PM64A, 'RGC64B, 'RGC64USB, 'PN80, 'PN80A, 'PN80USB, 'PZ100, 'PZ100A, 'PZ100B, 'PZ5x100, 'PZ100USB

- One READ ME FIRST document
- One MSP430 CD-ROM
- One 32.768-kHz crystal from Micro Crystal (except MSP-TS430PW24)
- One target socket module
- A 2x7-pin male JTAG connector is also present on the PCB (see different setup for L092)
- One small box containing two MSP430 device samples (See table for Sample Type)

**Table 1-2. Individual Kit Contents, MSP-TS430xx**

Target Socket Module	Socket Type	Supported Devices	Included Devices	Headers / Comment
MSP-TS430PW14	14-pin PW (TSSOP ZIF)	MSP430F20xx, 'G2x01, 'G2x11, 'G2x21, 'G2x31	2 x MSP430F2013IPW	Four PCB 1x7-pin headers (two male and two female)
MSP-TS430L092	14-pin PW (TSSOP ZIF)	MSP-TS430L092	2 x MSP430L092IPW	Four PCB 1x7-pin headers (two male and two female). A "Micro-MaTch" 10-pin female connector is also present on the PCB which connects the kit with an 'Active Cable' PCB, this 'Active Cable' PCB is connected by 14 Pin JTAG cable with the FET430UIF
MSP-TS430PW24	24-pin PW (TSSOP ZIF)	MSP430AFE2xx	2 x MSP430AFE253IPW	Four PCB 1x12-pin headers (two male and two female)
MSP-TS430DW28	28-pin DW (SSOP ZIF)	MSP430F11x1, 'F11x2, 'F12x 'F12x2 'F21xx. Supports devices in 20- and 28-pin DA packages	2 x MSP430F123IDW	Four PCB 1x12-pin headers (two male and two female)
MSP-TS430PW28	28-pin PW (TSSOP ZIF)	MSP430F11x1, 'F11x2, 'F12x, 'F12x2, 'F21xx	2 x MSP430F2132IPW	Four PCB 1x12-pin headers (two male and two female)
MSP-TS430PW28A	28-pin PW (TSSOP ZIF)	MSP430F20xx, MSP430G2xxx in 14-, 20-, and 28-pin PW packages	2 x MSP430G2452IPW28	Four PCB 1x12-pin headers (two male and two female)
MSP-TS430DA38	38-pin DA (TSSOP ZIF)	MSP430F22xx	2 x MSP430F2274IDA	Four PCB 1x19-pin headers (two male and two female)
MSP-TS430QFN23x0	40-pin RHA (QFN ZIF)	MSP430F23x0	2 x MSP430F2370IRHA	Eight PCB 1x10-pin headers (four male and four female)
MSP-TS430RSB40	40-pin RSB (QFN ZIF)	MSP430F51x1, 'F51x2	2 x MSP430F5172IRSB	Eight PCB 1x10-pin headers (four male and four female)
MSP-TS430RHA40A	40-pin RHA (QFN ZIF)	MSP430FR572x, 'FR573x	2 x MSP430FR5739IRHA	Eight PCB 1x10-pin headers (four male and four female)
MSP-TS430DL48	48-pin DL (TSSOP ZIF)	MSP430F42x0	2 x MSP430F4270IDL	Four PCB 2x12-pin headers (two male and two female)
MSP-TS430RGZ48B	48-pin RGZ (QFN ZIF)	MSP430F534x	2 x MSP430F5342IRGZ	Eight PCB 1x12-pin headers (four male and four female)
MSP-TS430PM64	64-pin PM (QFP ZIF)	MSP430F13x, 'F14x, 'F14x1, 'F15x, 'F16x(1), 'F23x, 'F24x, 'F24xx, 'F261x, 'F41x, 'F42x(A), 'FE42x(A), 'FE42x2, 'FW42x	TS Kit: 2 x MSP430F2618IPM; FET Kit: 2 x MSP430F4171IPM and 2 x MSP430F169IPM	Eight PCB 1x16-pin headers (four male and four female)
MSP-TS430PM64A	64-pin PM (QFP ZIF)	MSP430F41x2	2 x MSP430F4152IPM	Eight PCB 1x16-pin headers (four male and four female)
MSP-TS430RGC64B	64-pin RGC (QFN ZIF)	MSP430F530x	2 x MSP430F5310IRGC	Eight PCB 1x16-pin headers (four male and four female)
MSP-TS430RGC64USB	64-pin RGC (QFN ZIF)	MSP430F550x, 'F551x, 'F552x	2 x MSP430F5510IRGC and/or 2 x MSP430F5528IRGC	Eight PCB 1x16-pin headers (four male and four female)
MSP-TS430PN80	80-pin PN (QFP ZIF)	MSP430F241x, 'F261x, 'F43x, 'F43x1, 'FG43x, 'F47x, 'FG47x	2 x MSP430FG439IPN	Eight PCB 1x20-pin headers (four male and four female)
MSP-TS430PN80A	80-pin PN (QFP ZIF)	MSP430F532x	2 x MSP430F5329IPN	Eight PCB 1x20-pin headers (four male and four female)
MSP-TS430PN80USB	80-pin PN (QFP ZIF)	MSP430F552x, 'F551x	2 x MSP430F5529IPN	Eight PCB 1x20-pin headers (four male and four female)
MSP-TS430PZ100	100-pin PZ (QFP ZIF)	MSP430F43x, 'F43x1, 'F44x, 'FG461x, 'F47xx	2 x MSP430FG4619IPZ	Eight PCB 1x25-pin headers (four male and four female)
MSP-TS430PZ100A	100-pin PZ (QFP ZIF)	MSP430F471xx	2 x MSP430F47197IPZ	Eight PCB 1x25-pin headers (four male and four female)

**Table 1-2. Individual Kit Contents, MSP-TS430xx (continued)**

Target Socket Module	Socket Type	Supported Devices	Included Devices	Headers / Comment
MSP-TS430PZ100B	100-pin PZ (QFP ZIF)	MSP430F67xx	2 x MSP430F6733IPZ	Eight PCB 1x25-pin headers (four male and four female)
MSP-TS430PZ5x100	100-pin PZ (QFP ZIF)	MSP430F543x, MSP430BT5190IPZ	2 x MSP430F5438IPZ	Eight PCB 1x25-pin headers (four male and four female)
MSP-TS430PZ100USB	100-pin PZ (QFP ZIF)	MSP430F663x, 'F563x	2 x MSP430F6638IPZ	Eight PCB 1x25-pin headers (four male and four female)

See the device data sheets for device specifications. Device errata can be found in the respective device product folder on the web provided as a PDF document. Depending on the device, errata may also be found in the device bug database at [www.ti.com/sc/cgi-bin/buglist.cgi](http://www.ti.com/sc/cgi-bin/buglist.cgi).

### 1.13 Kit Contents, EM430Fx137RF900

- One READ ME FIRST document
- One legal notice
- One MSP430 CD-ROM
- Two target socket module

**MSP-EM430F5137RF900:** Two EM430F5137RF900 target socket modules. This is the PCB on which is soldered a CC430F5137 device in a 48-pin RGZ package. A 2x7-pin male connector is also present on the PCB

**MSP-EM430F6137RF900:** Two EM430F6137RF900 target socket modules. This is the PCB on which is soldered a CC430F6137 device in a 64-pin RGC package. A 2x7-pin male connector is also present on the PCB

- Two CC430EM battery packs
- Four AAA batteries
- Two 868-/915-MHz antennas
- Two 32.768-kHz crystals
- 18 PCB 2x4-pin headers

### 1.14 Hardware Installation, MSP-FET430PIF

Follow these steps to install the hardware for the MSP-FET430PIF tools:

1. Use the 25-conductor cable to connect the FET interface module to the parallel port of the PC. The necessary driver for accessing the PC parallel port is installed automatically during CCE/CCS or IAR Embedded Workbench installation. Note that a restart is required after the CCE/CCS or IAR Embedded Workbench installation for the driver to become active.
2. Use the 14-conductor cable to connect the parallel-port debug interface module to a target board, such as an MSP-TS430xxx target socket module. Module schematics and PCBs are shown in [Appendix B](#).

## 1.15 Hardware Installation, MSP-FET430UIF

Follow these steps to install the hardware for the MSP-FET430UIF tool:

1. Use the USB cable to connect the USB-FET interface module to a USB port on the PC. The USB FET should be recognized, as the USB device driver should have been installed with the IDE (Code Composer Essentials/Studio or IAR Embedded Workbench).. If the install wizard starts, follow the prompts and point the wizard to the driver files.  
The default location for CCE is C:\Program Files\Texas Instruments\MSP430\_USB\_DRIVERS\_v3\  
The default location for CCS is C:\Program Files\Texas Instruments\ccs4\emulation\drivers\msp430\  
The default location for IAR Embedded Workbench is <Installation Root>\Embedded Workbench x.x\430\bin\WinXP.  
Detailed driver installation instructions can be found in [Appendix C](#).
2. After connecting to a PC, the USB FET performs a self-test during which the red LED flashes for approximately two seconds. If the self-test passes successfully, the green LED stays on.
3. Use the 14-conductor cable to connect the USB-FET interface module to a target board, such as an MSP-TS430xxx target socket module.
4. Ensure that the MSP430 device is securely seated in the socket, and that its pin 1 (indicated with a circular indentation on the top surface) aligns with the "1" mark on the PCB.
5. Compared to the parallel-port debug interface, the USB FET has additional features including JTAG security fuse blow and adjustable target  $V_{CC}$  (1.8 V to 3.6 V). Supply the module with up to 100 mA.

## 1.16 Hardware Installation, eZ430-F2013, eZ430-RF2500, eZ430-Chronos

Follow these steps to install the hardware for the eZ430-F2013 and eZ430-RF2500 tools:

1. Connect the eZ430-F2013, eZ430-RF2500 and eZ430-Chronos to a USB port of the PC.
2. The USB FET should be recognized by the PC. The USB device driver should have been installed with the IDE (Code Composer Studio or IAR Embedded Workbench - Code Composer Essentials only supports eZ430-F2013 and eZ430-RF2500). If the install wizard starts, follow the prompts and point the wizard to the driver files.  
The default location for CCE is C:\Program Files\Texas Instruments\MSP430\_USB\_DRIVERS\_v3\  
The default location for CCS is C:\Program Files\Texas Instruments\ccs4\emulation\drivers\msp430\  
The default location for IAR Embedded Workbench is <Installation Root>\Embedded Workbench x.x\430\bin\WinXP.  
Detailed driver installation instructions can be found in [Appendix C](#).

## 1.17 Hardware Installation, MSP-FET430Uxx, MSP-TS430xxx, FET430Fx137RF900, EM430Fx137RF900

**MSP-FET430Uxx** – 'U14, 'U092, 'U24, 'U28, 'U28A, 'U38, 'U23x0, 'U40, 'U40A, 'U48, 'U48B, 'U64, 'U64A, 'U64USB, 'U80, 'U80USB, 'U100, 'U100A, 'U100B, 'U5x100, 'U100USB

**TS430xxx** – 'PW14, 'L092, 'PW24, 'DW28, 'PW28, 'PW28A, 'DA38, 'QFN32x0, 'RSB40, 'DL48, 'RGZ48B, 'PM64, 'PM64A, 'RGC64B, 'RGC64USB, 'PN80, 'PN80A, 'PN80USB, 'PZ100, 'PZ100A, 'PZ100B, 'PZ5x100, 'PZ100USB

Follow these steps to install the hardware for the MSP-FET430Uxx and MSP-TS430xxx tools:

1. Connect the MSP-FET430PIF or MSP-FET430UIF debug interface to the appropriate port of the PC. Use the 14-conductor cable to connect the FET interface module to the supplied target socket module.
2. Ensure that the MSP430 device is securely seated in the socket and that its pin 1 (indicated with a circular indentation on the top surface) aligns with the "1" mark on the PCB.
3. Ensure that the two jumpers (LED and VCC) near the 2x7-pin male connector are in place. Illustrations of the target socket modules and their parts are found in [Appendix B](#).

---

**NOTE:** Regarding 'U38, see FAQ [Hardware #2](#) in [Appendix A](#).

---

## 1.18 Important MSP430 Documents on the CD-ROM and Web

The primary sources of MSP430 information are the device-specific data sheet and user's guide. The most up-to-date versions of these documents that are available at the time of production are provided on the CD-ROM included with this tool. The MSP430 web site ([www.ti.com/msp430](http://www.ti.com/msp430)) contains the most recent version of these documents.

PDF documents describing the CCS tools (CCS IDE, the assembler, the C compiler, the linker, and the librarian) are in the msp430\documentation folder. A Code Composer Studio specific [Wiki page \(FAQ\)](#) is available, and the Texas Instruments [E2E Community support forums](#) for the MSP430 and Code Composer Studio v4 provide additional help besides the product help and Welcome page.

PDF documents describing the IAR tools (Workbench/C-SPY, the assembler, the C compiler, the linker, and the librarian) are in the common\doc and 430\doc folders. Supplements to the documents (i.e., the latest information) are available in HTML format in the same directories. 430\doc\readme\_start.htm provides a convenient starting point for navigating the IAR documentation.

## ***Design Considerations for In-Circuit Programming***

---

---

This chapter presents signal requirements for in-circuit programming of the MSP430.

<b>Topic</b>	<b>Page</b>
<b>2.1 Signal Connections for In-System Programming and Debugging .....</b>	<b>24</b>
<b>2.2 External Power .....</b>	<b>27</b>
<b>2.3 Bootstrap Loader (BSL) .....</b>	<b>27</b>

## 2.1 Signal Connections for In-System Programming and Debugging

### MSP-FET430PIF, MSP-FET430UIF, MSP-GANG430, MSP-PRGS430

With the proper connections, the debugger and an FET hardware JTAG interface (such as the MSP-FET430PIF and MSP-FET430UIF) can be used to program and debug code on the target board. In addition, the connections also support the MSP-GANG430 or MSP-PRGS430 production programmers, thus providing an easy way to program prototype boards, if desired.

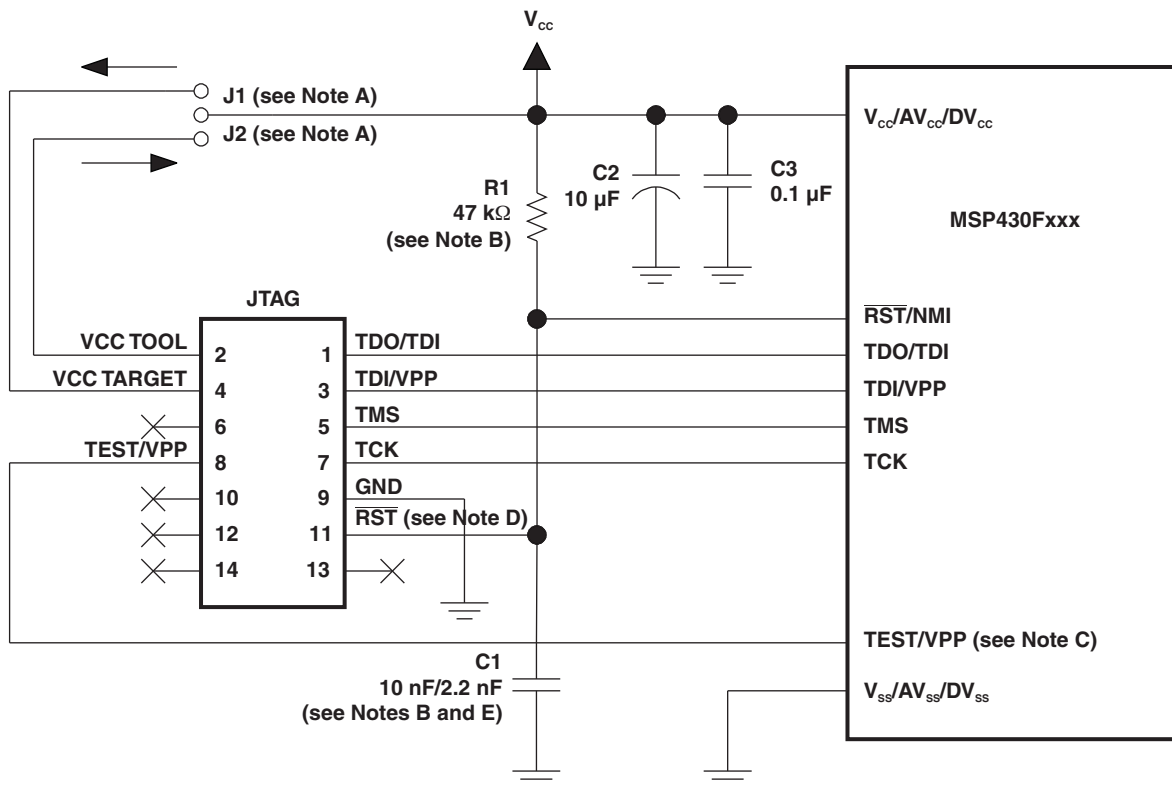

[Figure 2-1](#) shows the connections between the 14-pin FET interface module connector and the target device required to support in-system programming and debugging for 4-wire JTAG communication.

[Figure 2-2](#) shows the connections for 2-wire JTAG mode (Spy-Bi-Wire). While 4-wire JTAG mode is supported on all MSP430 devices, 2-wire JTAG mode is available on selected devices only. See the *CCS User's Guide for MSP430* ([SLAU157](#)) or *IAR for MSP430 User's Guide* ([SLAU138](#)) for information on which interface method can be used on which device.

The connections for the FET interface module and the MSP-GANG430 or MSP-PRGS430 are identical. Both the FET interface module and MSP-GANG430 can supply  $V_{CC}$  to the target board (via pin 2). In addition, the FET interface module and MSP-GANG430 have a  $V_{CC}$ -sense feature that, if used, requires an alternate connection (pin 4 instead of pin 2). The  $V_{CC}$ -sense feature senses the local  $V_{CC}$  present on the target board (i.e., a battery or other local power supply) and adjusts the output signals accordingly. If the target board is to be powered by a local  $V_{CC}$ , then the connection to pin 4 on the JTAG should be made, and not the connection to pin 2. This utilizes the  $V_{CC}$ -sense feature and prevents any contention that might occur if the local on-board  $V_{CC}$  were connected to the  $V_{CC}$  supplied from the FET interface module or the MSP-GANG430. If the  $V_{CC}$ -sense feature is not necessary (i.e., the target board is to be powered from the FET interface module or the GANG430) the  $V_{CC}$  connection is made to pin 2 on the JTAG header and no connection is made to pin 4. [Figure 2-1](#) and [Figure 2-2](#) show a jumper block that supports both scenarios of supplying  $V_{CC}$  to the target board. If this flexibility is not required, the desired  $V_{CC}$  connections may be hard-wired eliminating the jumper block. Pins 2 and 4 must not be connected simultaneously.

Note that in 4-wire JTAG communication mode (see [Figure 2-1](#)), the connection of the target RST signal to the JTAG connector is optional when using devices that support only 4-wire JTAG communication mode. However, when using devices that support 2-wire JTAG communication mode in 4-wire JTAG mode, the RST connection must be made. The MSP430 development tools and device programmers perform a target reset by issuing a JTAG command to gain control over the device. However, if this is unsuccessful, the RST signal of the JTAG connector may be used by the development tool or device programmer as an additional way to assert a device reset.

- A Make either connection J1 in case a local target power supply is used or connection J2 to power target from the debug/programming adapter.
- B The  $\overline{\text{RST}}/\text{NMI}$  pin R1/C1 configuration is device family dependent. See the respective MSP430 family user's guide for the recommended configuration.
- C The TEST pin is available only on MSP430 family members with multiplexed JTAG pins. See the device-specific data sheet to determine if this pin is available.
- D The connection to the JTAG connector  $\overline{\text{RST}}$  pin is optional when using 4-wire JTAG communication mode capable-only devices and not required for device programming or debugging. However, this connection is required when using 2-wire JTAG communication mode capable devices in 4-wire JTAG mode.
- E When using 2-wire JTAG communication capable devices in 4-wire JTAG mode, the upper limit for C1 should not exceed 2.2 nF. This applies to both TI FET interface modules (LPT/USB FET).

**Figure 2-1. Signal Connections for 4-Wire JTAG Communication**

- Make either connection J1 in case a local target power supply is used or connection J2 to power target from the debug/programming adapter.
- The device RST/NMI/SBWTIO pin is used in 2-wire mode for bidirectional communication with the device during JTAG access and that any capacitance attached to this signal may affect the ability to establish a connection with the device. The upper limit for C1 is 2.2 nF when using current TI FET interface modules (USB FET).
- R2 protects the JTAG debug interface TCK signal from the JTAG security fuse blow voltage that is supplied by the TEST/VPP pin during the fuse blow process. If fuse blow functionality is not needed, R2 is not required (populate 0 ?), and do not connect TEST/VPP to TEST/SBWTCK.

**Figure 2-2. Signal Connections for 2-Wire JTAG Communication (Spy-Bi-Wire)**

## 2.2 External Power

The PC parallel port can source a limited amount of current. Because of the ultra-low-power requirement of the MSP430, a standalone FET does not exceed the available current. However, if additional circuitry is added to the tool, this current limit could be exceeded. In this case, external power can be supplied to the tool via connections provided on the target socket modules. See the schematics and pictorials of the target socket modules in [Appendix B](#) to locate the external power connectors.

The MSP-FET430UIF can supply targets with up to 100 mA through pin 2 of the 14-pin connector.  $V_{CC}$  for the target can be selected between 1.8 V and 5 V in steps of 0.1 V. Alternatively, the target can be supplied externally. In this case, the external voltage should be connected to pin 4 of the 14-pin connector. The MSP-FET430UIF then adjusts the level of the JTAG signals to external  $V_{CC}$  automatically. Only pin 2 (MSP-FET430UIF supplies target) or pin 4 (target is externally supplied) must be connected; not both at the same time.

When a target socket module is powered from an external supply, the external supply powers the device on the target socket module and any user circuitry connected to the target socket module, and the FET interface module continues to be powered from the PC via the parallel port. If the externally supplied voltage differs from that of the FET interface module, the target socket module must be modified so that the externally supplied voltage is routed to the FET interface module (so that it may adjust its output voltage levels accordingly). See the target socket module schematics in [Appendix B](#).

## 2.3 Bootstrap Loader (BSL)

The JTAG pins provide access to the flash memory of the MSP430Fxxx devices. On some devices, these pins are shared with the device port pins, and this sharing of pins can complicate a design (or sharing may not be possible). As an alternative to using the JTAG pins, most MSP430Fxxx devices contain a program (a "bootstrap loader") that permits the flash memory to be erased and programmed using a reduced set of signals. The *MSP430 Programming Via the Bootstrap Loader User's Guide* ([SLAU319](#)) describes this interface. TI does not produce a BSL tool. However, customers can easily develop their own BSL tools using the information in the application reports, or BSL tools can be purchased from third parties. See the [MSP430 web site](#) for the application reports and a list of MSP430 third-party tool developers.

TI suggests that MSP430Fxxx customers design their circuits with the BSL in mind (i.e., TI suggests providing access to these signals via, for example, a header).

See FAQ [Hardware #11](#) for a second alternative to sharing the JTAG and port pins.

## ***Frequently Asked Questions and Known Issues***

---

---

This appendix presents solutions to frequently asked questions regarding the MSP-FET430 hardware.

<b>Topic</b>	<b>Page</b>
<b>A.1 Hardware FAQs .....</b>	<b>30</b>
<b>A.2 Known Issues .....</b>	<b>32</b>

## A.1 Hardware FAQs

1. **The state of the device** (CPU registers, RAM memory, etc.) **is undefined following a reset.** Exceptions to the above statement are that the PC is loaded with the word at 0xFFFFE (i.e., the reset vector), the status register is cleared, and the peripheral registers (SFRs) are initialized as documented in the device family user's guides. The CCE/CCS debugger and C-SPY reset the device after programming it.
2. **MSP430F22xx Target Socket Module (MSP-TS430DA38) – Important Information**  
 Due to the large capacitive coupling introduced by the device socket between the adjacent signals XIN/P2.6 (socket pin 6) and  $\overline{\text{RST}}$ /SBWTDIO (socket pin 7), in-system debugging can disturb the LFXT1 low-frequency crystal oscillator operation (ACLK). This behavior applies only to the Spy-Bi-Wire (2-wire) JTAG configuration and only to the period while a debug session is active.  
 Workarounds:
  - Use the 4-wire JTAG mode debug configuration instead of the Spy-Bi-Wire (2-wire) JTAG configuration. This can be achieved by placing jumpers JP4 through JP9 accordingly.
  - Use the debugger option "Run Free" that can be selected from the Advanced Run drop-down menu (at top of Debug View). This prevents the debugger from accessing the MSP430 while the application is running. Note that, in this mode, a manual halt is required to see if a breakpoint was hit. See the IDE documentation for more information on this feature.
  - Use an external clock source to drive XIN directly.
3. **With current interface hardware and software, there is a weakness when adapting target boards that are powered externally.** This leads to an accidental fuse check in the MSP430. This is valid for PIF and UIF but is mainly seen on UIF. A solution is being developed.  
 Workarounds:
  - Connect  $\overline{\text{RST}}$ /NMI pin to JTAG header (pin 11), LPT/USB tools are able to pull the RST line, which also resets the device internal fuse logic.
  - Use the debugger option "Release JTAG On Go" that can be selected from the IDE drop-down menu. This prevents the debugger from accessing the MSP430 while the application is running. Note that in this mode, a manual halt is required to see if a breakpoint was hit. See the IDE documentation for more information on this feature.
  - Use an external clock source to drive XIN directly.
4. The 14-conductor **cable** connecting the FET interface module and the target socket module **must not exceed 8 inches (20 centimeters) in length.**
5. The signal assignment on the **14-conductor cable** is **identical** for the **parallel port interface** and the **USB FET.**
6. **To utilize the on-chip ADC voltage references, C6** (10  $\mu$ F, 6.3 V, low leakage) **must be installed** on the target socket module.
7. **To utilize the charge pump on the devices with LCD+ Module, C4** (10  $\mu$ F, low leakage) **must be installed** on the target socket module.
8. **Crystals/resonators Q1 and Q2** (if applicable) **are not provided on the target socket module.** For MSP430 devices that contain user-selectable loading capacitors, the effective capacitance is the selected capacitance plus 3 pF (pad capacitance) divided by two.
9. **Crystals/resonators have no effect upon the operation of the tool and the CCE/CCS debugger or C-SPY** (as any required clocking/timing is derived from the internal DCO/FLL).
10. **On 20-pin and 28-pin devices with multiplexed port/JTAG pins** (P1.4 to P1.7), to use these pin in their port capacity:  
 For CCE/CCS: "Run Free" (in Run pull-down menu at top of Debug View) must be selected.  
 For C-SPY: "Release JTAG On Go" must be selected.
11. **As an alternative to sharing the JTAG and port pins** (on 20 and 28 pin devices), **consider using an MSP430 device that is a "superset" of the smaller device.** A very powerful feature of the MSP430 is that the family members are code and architecturally compatible, so code developed on one device (for example, one without shared JTAG and port pins) ports effortlessly to another (assuming an equivalent set of peripherals).

12. **Information memory may not be blank** (erased to 0xFF) when the device is delivered from TI. Customers should erase the information memory before its first use. Main memory of packaged devices is blank when the device is delivered from TI.
13. **The device current increases by approximately 10 mA when a device in low-power mode is stopped** [using Halt (CCE/CCS) or Esc (C-SPY)] **and then the low-power mode is restored** [using Run (CCE/CCS) or Go (C-SPY)]. This behavior appears to happen on all devices except the MSP430F12x.
14. The following **ZIF sockets** are used in the FET tools and target socket modules:
  - 14-pin device (PW package): Enplas OTS-14-065-01
  - 14-pin package for 'L092 (PW package): Yamaichi IC189-0142-146
  - 24-pin package (PW package): Enplas OTS-24(28)-0.65-02
  - 28-pin device (DW package): Wells-CTI 652 D028
  - 28-pin device (PW package): Enplas OTS-28-0.65-01
  - 38-pin device (DA package): Yamaichi IC189-0382-037
  - 40-pin device (RHA package): Enplas QFN-40B-0.5-01
  - 40-pin device (RSB package): Enplas QFN-40B-0.4
  - 48-pin device (RGZ package): Yamaichi QFN11T048-008 A101121-001
  - 48-pin device (DL package): Yamaichi IC51-0482-1163
  - 64-pin device (PM package): Yamaichi IC51-0644-807
  - 64-pin device (RGC package): Yamaichi QFN11T064-006
  - 80-pin device (PN package): Yamaichi IC201-0804-014
  - 100-pin device (PZ package): Yamaichi IC201-1004-008

## A.2 Known Issues

### **MSP-FET430PIF**     *Some PCs do not supply 5 V through the parallel port*

---

**Problem Description**     Device identification problems with modern PCs, because the parallel port often does not deliver 5 V as was common with earlier hardware.

1. When connected to a laptop, the test signal is clamped to 2.5 V.
2. When the external  $V_{CC}$  becomes less than 3 V, up to 10 mA is flowing in the adapter via pin 4 (sense).

**Solution**     Measure the voltage level of the parallel port. If it is too low, provide external 5 V to the  $V_{CC}$  pads of the interface. The jumper on a the target socket must be switched to external power.

### **MSP-FET430UIF**     *Current detection algorithm of the UIF firmware*

---

**Problem Description**     If high current is detected, the  $I_{CC}$  Monitor algorithm stays in a loop of frequently switching on and off the target power supply. This power switching puts some MSP430 devices such as the MSP430F5438 in a state that requires a power cycle to return the device to JTAG control.

A side issue is that if the UIF firmware has entered this switch on / switch off loop, it is not possible to turn off the power supply to the target by calling `MSP430_VCC(0)`. A power cycle is required to remove the device from this state.

**Solution**     IAR KickStart and Code Composer Essentials that have the MSP430.dll version 2.04.00.003 and higher do not show this problem. Update the software development tool to this version or higher to update the MSP-FET430UIF firmware.

## Hardware

This appendix contains information relating to the FET hardware, including schematics, PCB pictorials, and bills of materials. All other tools, such as the eZ430 series, are described in separate product-specific user's guides.

Figure B-3. MSP-TS430L092 Target Socket Module, Schematic

### Settings of the MSP-TS430L092 Target Socket

Figure B-4 shows the PCB layout of the MSP-TS430L092 target socket. The following pinning is recommended:

- JP1 is write enable for the EPROM. If this is not set, the EPROM can only be read.
- JP2 and JP3 connect device supply with boost converter. They can be opened to measure device current consumption. For default operation, they should be closed.

B.3 MSP-TS430L092 Active Cable

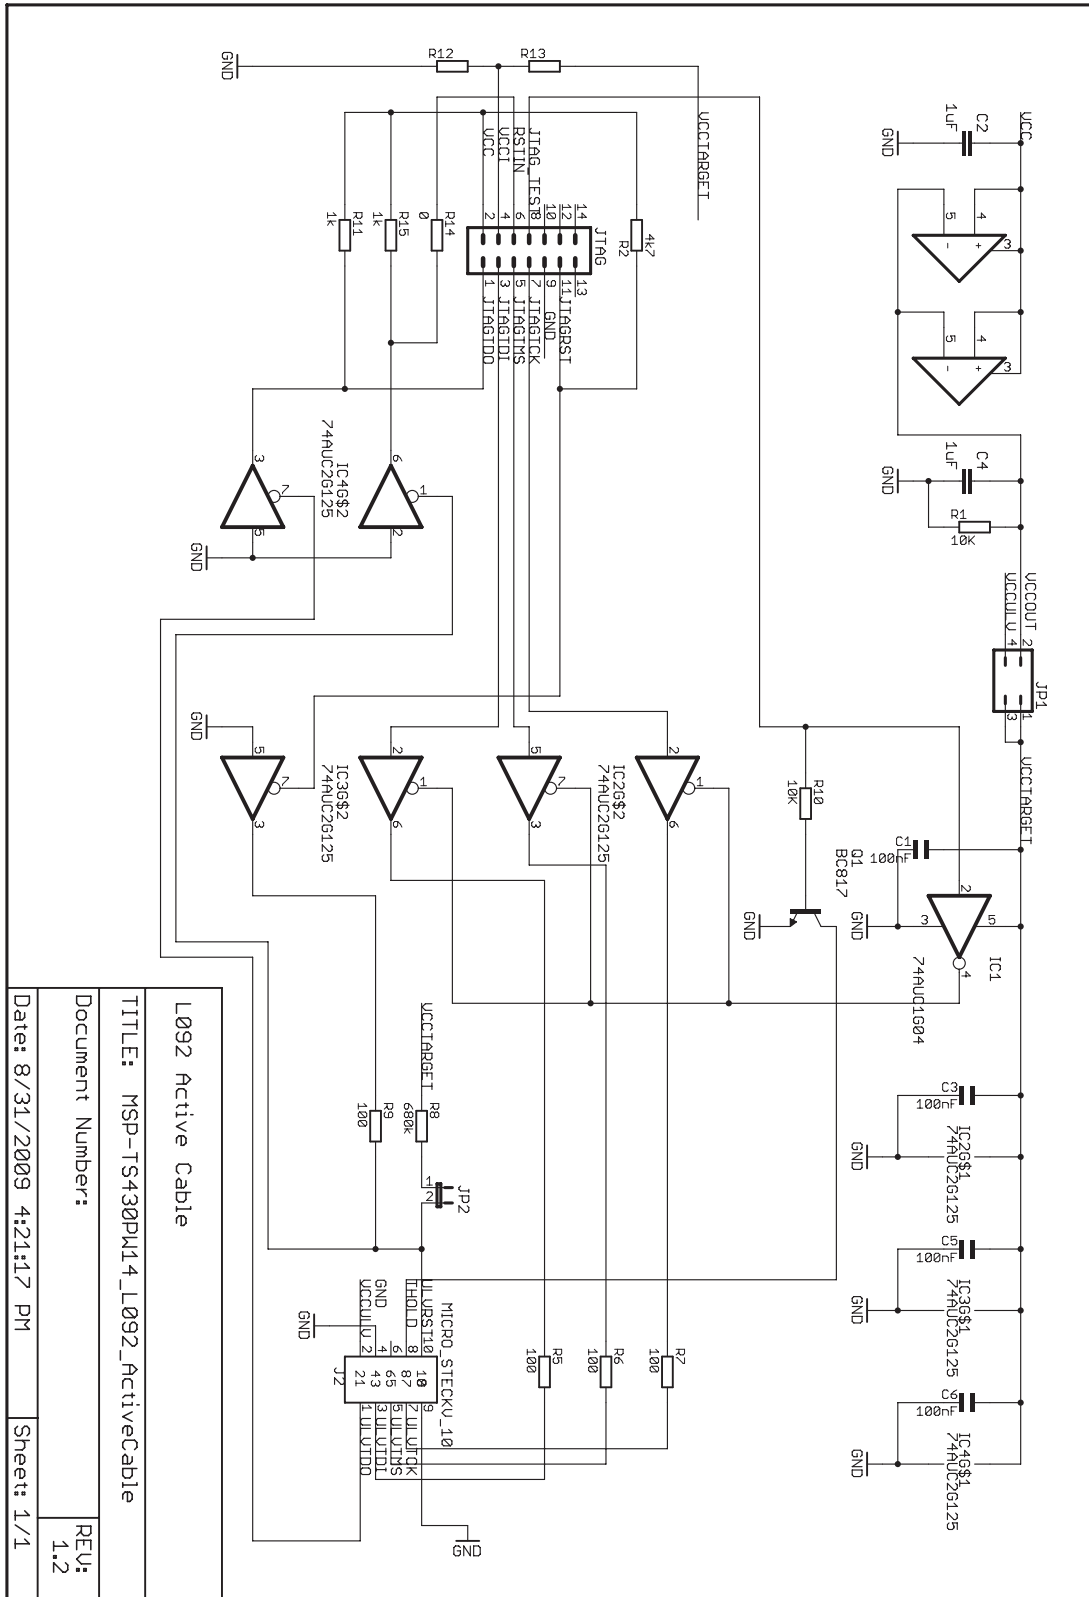

Figure B-5. MSP-TS430L092 Active Cable Target Socket Module, Schematic

Figure B-6 shows the PCB layout for the Active Cable. The following pinning is possible:

- JP1 has two jumpers (Jumper 1 and Jumper 2) that can be set as shown in Table B-3.

**Table B-3. MSP-TS430L092 JP1 Settings**

Jumper 1	Jumper 2	Description
Off	Off	The active cable has no power and does not function.
Off	On	The active cable receives power from target socket. For this option, the target socket must have its own power supply.
On	Off	The active cable receives power from the JTAG connector.
On	On	The JTAG connector powers the active cable and the target socket. For this option, the target socket must not have its own power source, as this would cause a not defined state.

- JP2 is for reset. For the standard MSP-TS430L092, this jumper must be set. It sets the reset pin to high and can also control it. Without this jumper on the MSP-TS430L092, reset is set to zero.

## B.25 MSP-TS430PZ100USB

Due to the use of diodes in the power chain, the voltage on the MSP430F5xx device is approximately 0.3 V lower than is set by the debugging tool. Set the voltage in the IDE to 0.3 V higher than desired; for example, to run the MCU at 3.0 V, set it to 3.3 V.

Figure B-49. MSP-TS430PZ100USB Target Socket Module, Schematic

Figure B-61. MSP-FET430UIF USB Interface, PCB

### **B.29.1 MSP-FET430UIF Revision History**

#### Revision 1.3

- Initial released hardware version

#### Assembly change on 1.3 (May 2005)

- R29, R51, R42, R21, R22, R74: value changed from 330R to 100R

#### Changes 1.3 to 1.4 (Aug 2005)

- J5: VBUS and RESET additionally connected
- R29, R51, R42, R21, R22, R74: value changed from 330R to 100R
- U1, U7: F1612 can reset TUSB3410; R44 = 0R added
- TARGET-CON.: pins 6, 10, 12, 13, 14 disconnected from GND
- Firmware-upgrade option through BSL: R49, R52, R53, R54 added; R49, R52 are currently DNP
- Pullups on TCK and TMS: R78, R79 added
- U2: Changed from SN74LVC1G125DBV to SN74LVC1G07DBV

---

**NOTE: Using a locally powered target board with hardware revision 1.4**

Using an MSP-FET430UIF interface hardware revision 1.4 with populated R62 in conjunction with a locally powered target board is not possible. In this case, the target device RESET signal is pulled down by the FET tool. It is recommended to remove R62 to eliminate this restriction. This component is located close to the 14-pin connector on the MSP-FET430UIF PCB. See the schematic and PCB drawings in this document for the exact location of this component.

---

#### Assembly change on 1.4 (January 2006)

- R62: not populated

## Hardware Installation Guide

---

---

---

This section describes the hardware installation process of the following USB debug interfaces on a PC running Windows XP:

- MSP-FET430UIF
- eZ430-F2013
- eZ430-RF2500
- eZ430-Chronos

The installation procedure for other supported versions of Windows is very similar and, therefore, not shown here.

Topic	Page
<b>C.1 Hardware Installation .....</b>	<b>130</b>

### C.1 Hardware Installation

1. Connect the USB Debug Interface with a USB cable to a USB port of the PC. (eZ430-F2013, eZ430-RF2500 and eZ430-Chronos can be connected without a cable.)
2. Windows should now recognize the new hardware as an "MSP430 XXX x.xx.xx" (see [Figure C-1](#)). The device name may be different from the one shown here.

**Figure C-1. Windows XP Hardware Recognition**

3. For CCE v3.1 SR1 and CCSv4.x the drivers will be installed automatically without user interaction (continue with step 13). For IAR the Hardware Wizard starts automatically and may opens the "Found New Hardware Wizard" window.

---

**NOTE:** This Window may not appear. If it does not, the drivers will be installed automatically. Continue with step 13.

---

4. Click "Next". The Hardware Wizard tries to find the driver in the system. If the driver is found, continue with step 8. If not, press "Back" and continue with step 5.
5. Select "Install from a list or specific location (Advanced)" (see [Figure C-2](#)).

**Figure C-2. Windows XP Hardware Wizard**

- Browse to the folder where the driver information files are located (see [Figure C-3](#)).

For CCE, the default folder is:

C:\Program Files\Texas Instruments\MSP430\_USB\_DRIVERS\_v3.1\

For CCS, the default folder is:

C:\Program Files\Texas Instruments\ccs4\emulation\drivers\msp430\

For IAR Embedded Workbench, the default folder is:

C:\Program Files\Texas Instruments\IAR Systems\Embedded Workbench 4.0\430\drivers\TIUSBFET\WinXP

**Figure C-3. Windows XP Driver Location Selection Folder**

- The Wizard generates a message that an appropriate driver has been found.

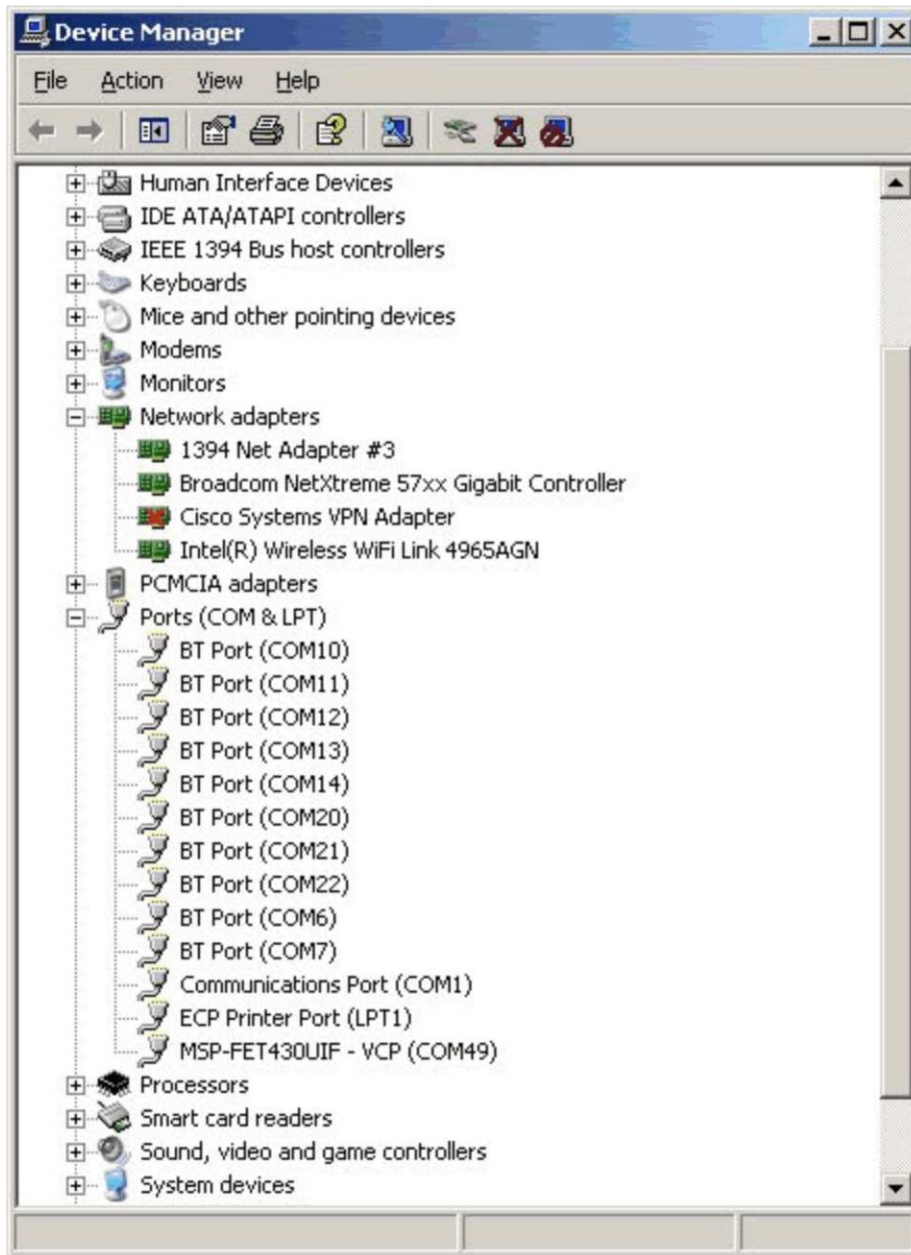

8. Note that Windows may show a warning that the driver is not certified by Microsoft. Ignore this warning and click "Continue Anyway" (see [Figure C-4](#)).

**Figure C-4. Windows XP Driver Installation**

9. The wizard installs the driver files.
10. The wizard shows a message that it has finished the installation of the software for "MSP-FET430UIF (TI USB FET) Adapter" (or "MSP430 Application UART").
11. **NOTE: This step is for MSP-FET430UIF and eZ430-F2013 only.**  
After closing the hardware wizard, Windows automatically recognizes another new hardware device called "MSP-FET430UIF - Serial Port".
12. **NOTE: This step is for MSP-FET430UIF and eZ430-F2013 only.**  
Depending on the current update version of the operating system, corresponding drivers are installed automatically or the hardware wizard opens again. **If the wizard starts again, repeat the previous steps.**

13. The USB debug interface is installed and ready to use. The Device Manager lists a new entry as shown in [Figure C-5](#), [Figure C-6](#), or [Figure C-7](#).

**Figure C-5. Device Manager Using MSP-FET430UIF or eZ430-F2013 (CCE and CCS Only)**

Figure C-6. Device Manager Using MSP-FET430UIF or eZ430-F2013 (IAR Only)

Figure C-7. Device Manager Using eZ430-RF2500 (CCE/CCS and IAR)

### Document Revision History

Version	Changes/Comments
SLAU278	Initial release
SLAU278A	Updated USB driver installation according to CCE v3.1 SR1 and CCS v4.
SLAU278B	Added information about MSP-FET430U80USB, MSP-TS430PN80USB, and eZ430-Chronos.
SLAU278C	Added bills of materials and updated some PCBs in Appendix B. Added information about MSP-TS430DA38, MSP-TS430DL48, MSP-TS430PW14, MSP-TS430PW28.
SLAU278D	Added information about MSP-TS430L092, MSP-TS430RSB40, MSP-TS430RGC64USB, MSP-TS430PZ100USB, MSP-FET430F5137RF900
SLAU278E	Added jumper information for MSP-TS430L092 PCBs to Appendix B. Added new supported devices in Chapter 1.
SLAU278F	Added information about MSP-TS430PW24, MSP-TS430PW28A, MSP-TS430RHA40A, MSP-TS430RGZ48B, MSP-TS430RGC64B, MSP-TS430PN80A, and MSP-TS430PZ100B. Updated MSP-TS430RSB40 schematics

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

## EVALUATION BOARD/KIT IMPORTANT NOTICE

Texas Instruments (TI) provides the enclosed product(s) under the following conditions:

This evaluation board/kit is intended for use for **ENGINEERING DEVELOPMENT, DEMONSTRATION, OR EVALUATION PURPOSES ONLY** and is not considered by TI to be a finished end-product fit for general consumer use. Persons handling the product(s) must have electronics training and observe good engineering practice standards. As such, the goods being provided are not intended to be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including product safety and environmental measures typically found in end products that incorporate such semiconductor components or circuit boards. This evaluation board/kit does not fall within the scope of the European Union directives regarding electromagnetic compatibility, restricted substances (RoHS), recycling (WEEE), FCC, CE or UL, and therefore may not meet the technical requirements of these directives or other related directives.

Should this evaluation board/kit not meet the specifications indicated in the User's Guide, the board/kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user indemnifies TI from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge.

**EXCEPT TO THE EXTENT OF THE INDEMNITY SET FORTH ABOVE, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.**

TI currently deals with a variety of customers for products, and therefore our arrangement with the user **is not exclusive.**

TI assumes **no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein.**

Please read the User's Guide and, specifically, the Warnings and Restrictions notice in the User's Guide prior to handling the product. This notice contains important safety information about temperatures and voltages. For additional information on TI's environmental and/or safety programs, please contact the TI application engineer or visit [www.ti.com/esh](http://www.ti.com/esh).

No license is granted under any patent right or other intellectual property right of TI covering or relating to any machine, process, or combination in which such TI products or services might be or are used.

### FCC Warning

This evaluation board/kit is intended for use for **ENGINEERING DEVELOPMENT, DEMONSTRATION, OR EVALUATION PURPOSES ONLY** and is not considered by TI to be a finished end-product fit for general consumer use. It generates, uses, and can radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment in other environments may cause interference with radio communications, in which case the user at his own expense will be required to take whatever measures may be required to correct this interference.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.

## Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
