Base Board for 2SC0108T SCALE-2 driver for 1700V IGBT modules or MOSFETs with an electrical interface for 2-level, 3-level and multilevel converter topologies with paralleling capability

Abstract

The 2BB0108T is a Base Board based on the SCALE-2 driver core 2SC0108T designed to drive 1700V IGBT modules like 34mm, 62mm IGBT modules and others. The Base Board features an electrical interface with a built-in DC/DC power supply.

The turn-on and turn-off gate resistors of both channels are not assembled in order to provide maximum flexibility. They must be assembled by the user before start of operation. Please refer to "Description & Application Manual for 2BB0108T Base Boards" for more information.

For drivers adapted to various types of high-power and high-voltage IGBT modules, refer to

Footnotes to the Key Data

1) If the specified value is exceeded, this indicates a Base Board overload. It should be noted that the Base Board is not protected against overload.
2) If the specified value is exceeded, this indicates a Base Board overload. It should be noted that the Base Board is not protected against overload. From 70°C to 85°C, the maximum permissible output power can be linearly interpolated from the given data.
3) This limit is due to active clamping. Refer to the "Description & Application Manual for 2BB0108T Base Boards".
4) Resulting pulse width of the direct output of the gate drive unit for short-circuit type I (excluding the delay of the gate resistors)
5) Factory set value. The blocking time can be reduced with an external resistor. Refer to the "Description & Application Manual for 2BB0108T Base Boards".
6) Jitter measurements are performed with input signals INx switching between 0V and 15V referred to GND, with a corresponding rise time and fall time of 8ns.
7) The gate resistors are not assembled on this Base Board. They must be assembled by the user. Please refer to "Description & Application Manual for 2BB0108T Base Boards".
