

MAX17600–MAX17605 Evaluation Kits

Evaluate: MAX17600–MAX17605

General Description

The MAX17600–MAX17605 evaluation kits (EV kits) provide a proven design to evaluate the MAX17600–MAX17605 dual, high-speed, low-side MOSFET drivers that can source/sink up to a 4A peak current. Each EV kit provides four separate designs to evaluate four different IC packages. The EV kits use a 4V to 14V (MAX17600/MAX17601/MAX17602), or a 6V to 14V (MAX17603/MAX17604/MAX17605) input supply.

Installed on the EV kits are the MAX17600–MAX17605 (in 8-pin TDFN, μ MAX[®], and SO packages).

Benefits and Features

- ◆ 4V to 14V Input Range (MAX17600/MAX17601/MAX17602)
- ◆ 6V to 14V Input Range (MAX17603/MAX17604/MAX17605)
- ◆ Sources/Sinks Up to 4A Peak Current
- ◆ Enable Inputs
- ◆ TTL (MAX17600/MAX17601/MAX17602) or High Noise Margin (HNM) (MAX17603/MAX17604/MAX17605) Logic-Level Inputs with Hysteresis for Noise Immunity
- ◆ Evaluates Four Different Packages
- ◆ Proven PCB Layout
- ◆ Fully Assembled and Tested

[Ordering Information/Selector Guide](#) appears at end of data sheet.

MAX17600–MAX17605 Evaluation Kits

Evaluate: MAX17600–MAX17605

Quick Start

Required Equipment

- MAX17600–MAX17605 EV kit
- 4V to 14V DC power supply

Procedure

The EV kits are fully assembled and tested. Follow the steps below to verify U1 board operation. **Caution: Do not turn on the power supply until all connections are completed.**

- 1) Verify that all jumpers are in their default positions, as shown in Table 1.
- 2) Connect the positive terminal of the power supply to the VDD1 PCB pad and the negative terminal to the nearest GND PCB pad on the EV kit.
- 3) Set the VDD1 power supply to 14V and enable its output.
- 4) Drive INA1 high and verify that the OUTA1 polarity is according to Table 2.
- 5) Drive INB1 high and verify that the OUTB1 polarity is according to Table 2.
- 6) Drive INA1 low and verify that the OUTA1 polarity is according to Table 2.
- 7) Drive INB1 low and verify that the OUTB1 polarity is according to Table 2.
- 8) Repeat accordingly for the other circuits.

Table 1. Jumper Descriptions (JU1–JU8)

| JUMPER | SHUNT POSITION | DESCRIPTION |
|--------|----------------|--|
| JU1 | 1-2 | Disables channel A for the TDFN-EP (3mm x 3mm) package |
| | Open* | Enables channel A for the TDFN-EP (3mm x 3mm) package |
| JU2 | 1-2 | Disables channel B for the TDFN-EP (3mm x 3mm) package |
| | Open* | Enables channel B for the TDFN-EP (3mm x 3mm) package |
| JU3 | 1-2 | Disables channel A for the SO (3.9mm x 4.9mm) package |
| | Open* | Enables channel A for the SO (3.9mm x 4.9mm) package |
| JU4 | 1-2 | Disables channel B for the SO (3.9mm x 4.9mm) package |
| | Open* | Enables channel B for the SO (3.9mm x 4.9mm) package |
| JU5 | 1-2 | Disables channel A for the μMAX-EP (3mm x 3mm) package |
| | Open* | Enables channel A for the μMAX-EP (3mm x 3mm) package |
| JU6 | 1-2 | Disables channel B for the μMAX-EP (3mm x 3mm) package |
| | Open* | Enables channel B for the μMAX-EP (3mm x 3mm) package |
| JU7 | 1-2 | Disables channel A for the TDFN-EP (2mm x 3mm) package |
| | Open* | Enables channel A for the TDFN-EP (2mm x 3mm) package |
| JU8 | 1-2 | Disables channel B for the TDFN-EP (2mm x 3mm) package |
| | Open* | Enables channel B for the TDFN-EP (2mm x 3mm) package |

*Default position.

MAX17600–MAX17605 Evaluation Kits

Evaluate: MAX17600–MAX17605

Detailed Description of Hardware

The MAX17600–MAX17605 EV kits operate on a 4V to 14V (MAX17600/MAX17601/MAX17602) or a 6V to 14V (MAX17603/MAX17604/MAX17605) wide-input voltage range and sources/sinks 4A peak current.

Enable (EN_ _)

Each EV kit has four separate sets of enables to evaluate each package:

- 1) ENA1/ENB1 enables/disables the TDFN-EP package
- 2) ENA2/ENB2 enables/disables the SO package
- 3) ENA3/ENB3 enables/disables the μ MAX-EP package
- 4) ENA4/ENB4 enables/disables the TDFN-EP package

Input (IN_ _)

Each EV kit has four separate sets of inputs to evaluate each package:

- 1) INA1/INB1 inputs control the output state for the TDFN-EP package
- 2) INA2/INB2 inputs control the output state for the SO package

- 3) INA3/INB3 inputs control the output state for the μ MAX-EP package

- 4) INA4/INB4 inputs control the output state for the TDFN-EP package

Power Supply Input (VDD_)

Each EV kit has four separate VDD inputs to evaluate each package:

- 1) VDD1 supplies power to the TDFN-EP package
- 2) VDD2 supplies power to the SO package
- 3) VDD3 supplies power to the μ MAX-EP package
- 4) VDD4 supplies power to the TDFN-EP package

Ground (GND)

Each EV kit has four circuits to evaluate each package. Each circuit has its own ground plane and each GND is not connected to the GND of the nearby circuit.

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
