

## Introduction

The OSD335x Family of System-In-Package (SIP) products are building blocks designed to allow easy and cost-effective implementation of systems based on Texas Instruments' powerful Sitara™ AM335x line of processors. The OSD335x integrates the AM335x along with the TI TPS65217C PMIC, the TI TL5209 LDO, up to 1 Gigabyte of DDR3 Memory, and resistors, capacitors, and inductors all into a single 27mm x 27mm design-in-ready package.

With this level of integration, the OSD335x Family of SIPs allows designers to focus on the key aspects of their system without spending time on the complicated high-speed design of the processor/DDR3 interface or the PMIC power distribution. It also reduces the overall size and complexity of the design and the supply chain. The OSD335x can significantly decrease the time to market for AM335x-based products.

## Features

- TI AM335x, TPS65217C, TL5209, DDR3, and over 140 Passive components integrated into a single package
- TI AM335x Features:
  - ARM® Cortex®-A8 up to 1GHz
  - 8 channel 12-bit SAR ADC
  - Ethernet 10/100/1000 x2
  - USB 2.0 HS OTG + PHY x2
  - MMC, SD and SDIO x2
  - LCD Controller
  - SGX 3D Graphics Engine
  - PRU Subsystem
- Access to All AM335x Peripherals: CAN, SPI, UART, I2C, GPIO, etc.
- Up to 1GB DDR3
- PWR In: AC Adapter, USB or Single cell (1S) Li-Ion / Li-Po Battery

OSD335x Block Diagram

- PWR Out: 1.8V, 3.3V and SYS
- AM335x I/O Voltage: 3.3V

## Benefits

- Integrates over 100 components into one package
- Compatible with AM335x development tools and software
- Wide BGA ball pitch allows for low-cost assembly.
- Significantly reduces design time
- Decreases layout complexity
- 35% reduction in board space vs discrete implementation
- Increased reliability through reduced number of components

## Package

- 400 Ball BGA (27mm X 27mm)
- 20 X 20 grid, 1.27mm pitch
- Temp Range: 0 to 85°C, -40 to 85°C

## 1 Revision History

Revision Number	Revision Date	Changes	Author
1	5/6/2016	Initial Release	Greg Sheridan, Kevin Troy
2	5/15/2016	Updated Misprint on ADC Specs on first page	Greg Sheridan
3	5/19/2016	Added Information on the MSL Rating	Greg Sheridan
4	6/12/16	Added reference to TI Handling Recommendations to Handling Section. Fixed Link	Greg Sheridan
5	12/5/16	Updated Electrical Characteristics add Thermal information. Also changed operating temperature from junction to case	Neeraj Dantu, Greg Sheridan
6	2/15/17	Updated Max Current and Voltage in Output Power and Electrical & Thermal Characterization Sections	Neeraj Dantu
7	6/19/2017	Updated Block Diagram. Highlighted that the processor I/Os are tied to 3.3V	Greg Sheridan
8	6/30/2017	Updated Block Diagrams. Updated Bake Time in the Package Section.	Greg Sheridan
9	7/21/2017	Updated to include discussion around the functionality of the TL5209 when the OSD335x is powered from VBAT	Neeraj Dantu
10	08/23/2017	Added Industrial Temperature.	Erik Welsh
11	10/12/2017	Added requirements for input voltage rise time and minimum interface connections	Neeraj Dantu
12	11/21/2017	Updated SYS_VDD2_3P3V current limit	Greg Sheridan
13	1/27/2018	Updated page numbers to match PDF page numbers	Greg Sheridan
14	02/16/2018	Updated voltage measurements	Neeraj Dantu
15	03/19/2019	Updated VIN_BAT information; Passive Tables	Erik Welsh

## 2 Block Diagram

The OSD335x family of devices consist of 4 main components serving 3 different functions. The main processor is a Texas Instruments Sitara™ AM335x ARM® Cortex®-A8. The power system has 2 devices from Texas Instruments, the TPS65217C Power Management IC (PMIC) and the TL5209 LDO. The last main component is up to 1GB DDR3 system memory. Figure 2.1 shows a detailed block diagram of the OSD335x and breaks out the key functions of the AM335x processor.

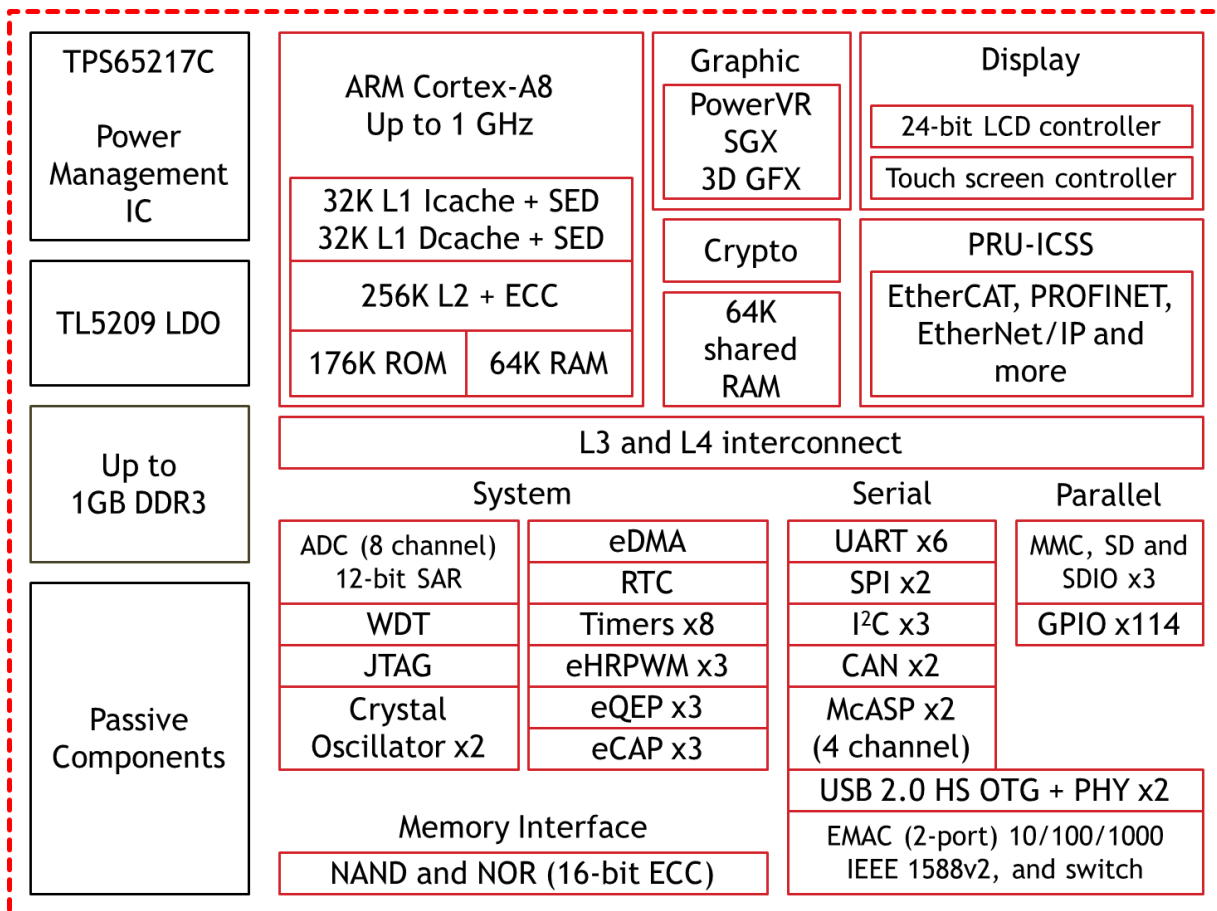

Figure 2.1. OSD335x Detailed Block Diagram

# OSD335x Family

Rev. 15 3/19/2019

## 2.1 Passives

Besides the four major components, the OSD335x also integrates over 140 capacitors, resistors, inductors, and ferrite beads (Passives). Table 2-2 and Table 2-3 lists the equivalent capacitance and resistance integrated into the OSD335x. This includes the approximate bulk capacitance on input and output power rails as well as all pull-up resistor locations and values. The OSD335x does not require any external decoupling / bypass capacitors in most applications. However, it does require additional bulk capacitance on one of the output power rails.

### 2.1.1 Additional Required Bulk Capacitance

The following output power rails require additional bulk capacitance to avoid in-rush / power up issues.

Table 2-1 - OSD335x Required Additional Capacitors (Approximate Bulk Capacitance)

From	To	Device	Description	Type	Value
<b>SYS_VOUT</b>	DGND	TPS65217C	SYS_VOUT output capacitance	C	~50uF

### 2.1.2 Integrated Bulk Capacitance

The following input and output power rails have bulk capacitance integrated within the SiP. This table is for informative purposes only.

Table 2-2 - OSD335x Capacitors (Approximate Bulk Capacitance)

From	To	Device	Description	Type	Value
<b>VIN_AC</b>	VSS	TPS65217C	VIN_AC input capacitance	C	10uF
<b>VIN_USB</b>	VSS	TPS65217C	VIN_USB input capacitance	C	10uF
<b>VIN_BAT</b>	VSS	TPS65217C	VIN_BAT input capacitance	C	10uF
<b>SYS_VOUT</b>	VSS	TPS65217C	SYS_VOUT output capacitance	C	60uF
<b>SYS_VDD1_3P3V</b>	VSS	TL5209	SYS_VDD1_3P3V output capacitance	C	2.2uF
<b>SYS_VDD2_3P3V</b>	VSS	TPS65217C	SYS_VDD2_3P3V output capacitance	C	2.2uF
<b>VDDSHV_3P3V</b>	VSS	TPS65217C	VDDSHV_3P3V output capacitance	C	10uF
<b>SYS_VDD_1P8V</b>	VSS	TPS65217C	SYS_VDD_1P8V output capacitance	C	10uF
<b>SYS_RTC_1P8V</b>	VSS	TPS65217C	SYS_RTC_1P8V output capacitance	C	2.2uF
<b>CAP_VDD_RTC</b>	VSS	AM335x	CAP_VDD_RTC capacitance	C	1uF

### 2.1.3 Integrated Resistors

The following pins have pull-up or pull-down resistors integrated within the SiP. This table is for informative purposes only.

*Table 2-3 - OSD335x Resistors (Pull-ups / Pull-downs)*

From	To	Device	Description	Type	Value
<b>PMIC_OUT_PWR_EN</b>	SYS_RTC_1P8V	TPS65217C	PWR_EN pull-up	R	10K Ohm
<b>PMIC_IN_I2C_SCL</b>	VDDSHV_3P3V	TPS65217C	SCL pull-up	R	4.7K Ohm
<b>PMIC_IN_I2C_SDA</b>	VDDSHV_3P3V	TPS65217C	SDA pull-up	R	4.7K Ohm
<b>EXT_WAKEUP</b>	SYS_RTC_1P8V	AM335x	EXT_WAKEUP input pull-up	R	10K Ohm
<b>EXTINTN</b>	VDDSHV_3P3V	AM335x	nNMI pull-up	R	10K Ohm

### 3 Product Number Information

Figure 3.1 shows an example of an orderable product number for the OSD335X family. This section explains the different sections of the product number. It will also list the valid entries and their meaning for each designator.

Figure 3.1. Example Product Number

Family Designator – Three letters that designate the family of device.

Processor Designator – A set of letters and numbers that designate the specific processor in the device. Table 3.1 shows the valid values for the Processor Designator.

Table 3.1. Processor Designators

Processor Designator	Processor
3358	Texas Instruments AM3358

Memory Designator – A set of letters and numbers that designate the DDR3 memory size in the device. Table 3.2 shows the valid values for the Memory Designator.

Table 3.2. Memory Designator

Memory Designator	DDR Memory Size
1G	1GB DDR3
512M	512 MB DDR3
256M	256 MB DDR3

Trim Designator – A set of letters and numbers that designate a set additional features in the device. Table 3.3 shows the valid values for the Trim Designator.

*Table 3.3. Trim Designator*

Trim Designator	Device Options
BAS	Base Model containing Processor, DDR Memory, PMIC, and LDO. Commercial: 0 to 85°C
IND	Base Model containing Processor, DDR Memory, PMIC, and LDO. Industrial: -40 to 85°C

## 4 Reference Documents

### 4.1 Data Sheets

Below are links to the data sheets for the key devices used in the OSD335X. Please refer to them for specifics on that device. The remainder of this document will describe how the devices are used in the OSD335X system. It will also highlight any differences between the performance stated in the device specific datasheet and what should be expected from its operation in the OSD335X.

- Processor AM335X <http://www.ti.com/product/AM3358/datasheet>
- PMIC TPS62517C <http://www.ti.com/product/TPS65217/datasheet>
- LDO TL509 <http://www.ti.com/product/TL5209/datasheet>

### 4.2 Other Reference

This section contains links to other reference documents that could be helpful when using the OSD335x device. Some are referenced in this document.

## 5 Ball Map

The pins on the OSD335x belong to 4 distinct categories, AM335x Signals, TPS65217C signals, Oscillators and Power Domains. With a few exceptions, the ball assignments for the OSD335x are a superset of the ball assignments for the AM335x. Table 5.1 through Table 5.5 show the ball map for the OSD335x.

## 5.2 AM335x Relocated Signals

A small number of signals from the AM335x have been moved to a different location on the OSD335x. For more information on these signals please refer to AN1002. A link to it is provided in the Reference Documents section of this document.

## 5.3 Not Connected Balls

The OSD335x ball map contains a number of balls which are marked NC (No Connect). These balls must be left unconnected on the system PCB since they may be used for other purposes in future versions of the OSD335x.

Most of these balls are from the AM335x pins associated with the DDR3 interface. They are not brought out because they are exclusively used internally to connect the AM335x with the DDR Memory. Several other balls in the ball map are also NC due to other functions handled internal to the OSD335x.

## 5.4 Reserved Signals

There is a subset of signals that are available on the OSD335x ball map but ***should not be*** used externally to the device. These signals are used internally to the OSD335x and using them could significantly affect the performance of the device. They are provided for test purposes only. The list of signals that should not be used can be found in Table 5.7.

## 6 OSD335x Components

The OSD335x integrates the Texas Instruments ARM® Cortex®-A8 Sitara™ AM335x processor along with the TI TPS65217C PMIC, the TI TL5209 LDO, up to 1 GB of DDR3 Memory, and the resistors, capacitors, and inductors into a single design-in-ready package. The following section contains any specific device information needed for the integrated components to design your system with the OSD335x.

### 6.1 AM335x Processor

The heart of the OSD335x is the Texas Instruments ARM® Cortex®-A8 Sitara™ AM335x processor. The processor in the OSD335x is configured to perform identically to a standalone device. Please refer to the data sheet in the Reference Documents section for details on using the AM335x processor.

#### 6.1.1 I/O Voltages

The OSD335x fixes the I/O voltage domains (VDDSHVx) of the AM335x to 3.3V for all dual voltage I/Os. This cannot be adjusted and means all of the signal I/O pins associated with the AM335x operate at 3.3V.

### 6.2 DDR3 Memory

The OSD335x integrates a DDR3 memory into the device and handles all of the connections needed between the AM335x and the DDR3. You will still have to set the proper registers to configure the AM335x DDR PHY to work correctly with the memory included in the OSD335x. Typically, this would require you to run through the procedure outlined in the AM335x DDR PHY register configuration for DDR3 using Software Leveling referred to in the Reference Documents section of this document. We have already run this procedure for the OSD335x and have provided a list of the recommended values for the registers in Table 6.1. It is recommended that you use this set of values for optimal performance.

Table 6.1 AM335x DDR PHY Register Settings

Register Name	Peripheral	Recommended Value
DDR_CMDx_IOCTL <sup>(1)</sup>	Control Module	0x0000018B
DDR_DATAx_IOCTL <sup>(2)</sup>	Control Module	0x0000018B
SDRAM_CONFIG	EMIF	0x61C05332
SDRAM_CONFIG_2	EMIF	0x00000000
SDRAM_REF_CTRL	EMIF	0x00000C30
SDRAM_TIM_1	EMIF	0x0AAAD4DB
SDRAM_TIM_2	EMIF	0x266B7FDA
SDRAM_TIM_3	EMIF	0x501F867F
ZQ_CONFIG	EMIF	0x50074BE4
DDR_PHY_CTRL_1	EMIF	0x00100007
CMDx_REG_PHY_CTRL_SLAVE_RATIO_0 <sup>(1)</sup>	DDR PHY	0x00000080
CMDx_REG_PHY_INVERT_CLKOUT_0 <sup>(1)</sup>	DDR PHY	0x00000000
DATAx_REG_PHY_RD_DQS_SLAVE_RATIO_0 <sup>(2)</sup>	DDR PHY	0x0000003A
DATAx_REG_PHY_WR_DQS_SLAVE_RATIO_0 <sup>(2)</sup>	DDR PHY	0x00000045
DATAx_REG_PHY_FIFO_WE_SLAVE_RATIO_0 <sup>(2)</sup>	DDR PHY	0x00000095
DATAx_REG_PHY_WR_DATA_SLAVE_RATIO_0 <sup>(2)</sup>	DDR PHY	0x0000007F

<sup>(1)</sup> "CMDx" refers to registers where x is in [0, 1, 2]

<sup>(2)</sup> "DATAx" refers to registers where x is in [0, 1]

Settings in Table 6.1 are recommended and supported. Other values may work but are not guaranteed. If you want to rerun the calibration yourself the seed values provided in Table 6.2 should be used.

Table 6.2 AM335x DDR PHY Calibration Seed Values

DATAx_PHY_RD_DQS_SLAVE_RATIO	40
DATAx_PHY_FIFO_WE_SLAVE_RATIO	64
DATAx_PHY_WR_DQS_SLAVE_RATIO	0

## 7 Power Management

The power management portion of the OSD335x consists of two devices, the TPS65217C (PMIC) and the TL5209 (LDO). The PMIC provides the necessary power rails to the AM335x and the DDR3 while the LDO is not used inside the SiP. Both devices provide power supply outputs that may be used to power circuitry external to the OSD335x. This section describes how to power the OSD335x in a system and the outputs that can be used.

### 7.1 Input Power

The OSD335x may be powered by any combination of the following input power supplies. Please refer to the TPS65217C datasheet for details.

The maximum risetime for input rails VIN\_AC and VIN\_USB (defined as time for the input voltage to rise from 100 mV to 4.5 V) is 50 ms. The device may fail to power up properly if this requirement is not met.

#### 7.1.1 VIN\_AC

The OSD335x may be powered by an external AC Adaptor at 5.0 VDC.

#### 7.1.2 VIN\_USB

The OSD335x may be powered by a USB port at 5.0 VDC.

#### 7.1.3 VIN\_BAT

The OSD335x may be powered by a single cell (1S) Li-Ion or Li-Polymer Battery nominally at 3.7 VDC.

Due to the dropout behavior of the LDO TL5209, the output voltage rail SYS\_VDD1\_3P3V cannot be used once VIN\_BAT drops below 3.5V. Please refer to the TL5209 datasheet for details.

When the VIN\_BAT input is not used, it must be connected to BAT\_VOLT.

### 7.2 Output Power

The OSD335x produces the following output power supplies.

#### 7.2.1 SYS\_VOUT: Switched VIN\_AC, VIN\_USB, or VIN\_BAT

The OSD335x contains a shared supply to power the AM335x, DDR3, and TL5209 which is also used to power external circuitry. This is supplied by the TPS65217C SYS output. The SYS output is a switched connection to one of the input power supplies selected by the TPS65217C as described in the datasheet for that device.

### 7.2.2 SYS\_VDD1\_3P3V

The OSD335x contains a dedicated 3.4 VDC supply<sup>1</sup> to power external circuitry. This is supplied by the TL5209, powered by the TPS65217C SYS output, and enabled by the TPS65217C LDO4.

Due to the dropout behavior of the LDO TL5209, the output voltage rail SYS\_VDD1\_3P3V cannot be used once VIN\_BAT drops below 3.5V. Please refer to the TL5209 datasheet for details.

### 7.2.3 SYS\_VDD2\_3P3V

The OSD335x contains a dedicated 3.3 VDC supply to power external circuitry. This is supplied by the TPS65217C LDO2.

### 7.2.4 SYS\_RTC\_1P8V

The OSD335x contains a shared 1.8 VDC supply to power the AM335x RTC which may also be used to power external circuitry. This is supplied by the TPS65217C LDO1.

Please note that the AM335x in the OSD335x is powered by TPS65217 PMIC **version C** which does not support RTC only mode.

### 7.2.5 SYS\_VDD\_1P8V

The OSD335x contains a shared 1.8 VDC supply to power the AM335x SRAM, PLLs, and USB which may also be used to power external circuitry. This is supplied by the TPS65217C LDO3.

### 7.2.6 SYS\_ADC\_1P8V

The OSD335x contains a shared 1.8 VDC supply to power the AM335x ADC which may also be used to power external analog circuitry. This is supplied by the TPS65217C LDO3 and filtered for analog applications.

## 7.3 Internal Power

The OSD335x has internal power supplies that are not available to power external circuitry. To do so will prevent the OSD335x from functioning properly. The power supplies are accessible externally for monitoring purposes only.

### 7.3.1 VDDSHV\_3P3V

The OSD335x contains a dedicated 3.3 VDC supply to power the AM335x I/O domain. This is supplied by the TPS65217C LDO4.

### 7.3.2 VDDS\_DDR

The OSD335x contains a dedicated 1.5 VDC supply to power the AM335x DDR3 interface and the DDR3 device.

<sup>1</sup> The LDO has an accuracy of 1 – 2% depending on the ambient temperature which will also affect the nominal voltage. See the TL5209 datasheet for more information.

## OSD335x Family

Rev. 15 3/19/2019

### 7.3.3 VDD\_MPU

The OSD335x contains a dedicated 1.1 VDC supply to power the AM335x MPU domain.

### 7.3.4 VDD\_CORE

The OSD335x contains a dedicated 1.1 VDC supply to power the AM335x CORE domain.

### 7.3.5 VDDS\_PLL

The OSD335x contains a filtered 1.8 VDC supply to power the AM335x PLLs and oscillators.

## 7.4 Total Current Consideration

The total current consumption of all power rails must not exceed the recommended input currents described in Table 8.2. This includes power consumption within the SiP from the AM335x and the DDR3, as well as all external loads on the output power rails from Section 7.2.

The power consumed by the AM335x can be estimated using the *AM335x Power Estimation Tool* found in the Reference Documents section of this document. When estimating power consumption, the efficiencies and types of the OSD335x internal power supplies must be considered. Refer to the “*Connections Diagram for TPS65217C and AM335x*” section of *Powering the AM335x with the TPS65217x* found in the Reference Documents section of this document for more information on the power supplies providing power to the AM335x.

## 7.5 Control and Status

The control and status connections for Processor-PMIC interface and RTC subsystem required to power the device are described in this section.

### 7.5.1 Minimum Processor-PMIC interface Connections

Table 7.1 lists the signals required to coordinate the operation of the AM335x and TPS65217C. Figure 7.1 and Figure 7.2 illustrate the required connections between the AM335x and the TPS65217C with RTC subsystem enabled and disabled respectively. These connections are the minimum required to operate the device in the corresponding mode. The accessibility of these signals enables other uses of reset, power control, power status, interrupt, wakeup, and serial communication signals.

The figures 7.1 and 7.2 only illustrate the interface between the AM335x and TPS65217C. .

Table 7.1. AM335x and TPS65217C Signal Descriptions

Signal	Description	Notes
PMIC_POWER_EN	PMIC Power Enable from AM335x	
PMIC_IN_PWR_EN	PMIC Power Enable to TPS65217C	1
I2C0_SCL	I2C0 SCL from AM335x	
PMIC_IN_I2C_SCL	I2C SCL to TPS65217C	1
I2C0_SDA	I2C0 SDA from AM335x	
PMIC_IN_I2C_SDA	I2C SDA to TPS65217C	1
PMIC_OUT_PGOOD	PGOOD from TPS65217C	
PWRONRSTN	PWRONRSTN to AM335x	
PMIC_OUT_LDO_PGOOD	LDO_PGOOD from TPS65217C	
RTC_PWRONRSTN	RTC_PWRONRSTN to AM335x	
PMIC_OUT_NINT	NINT from TPS65217C	
EXTINTN	EXTINTN to AM335x	1
PMIC_OUT_NWAKEUP	NWAKEUP from TPS65217C	
EXT_WAKEUP	EXT_WAKEUP to AM335x	1

1. See Table 2-3 for pull up on this signal

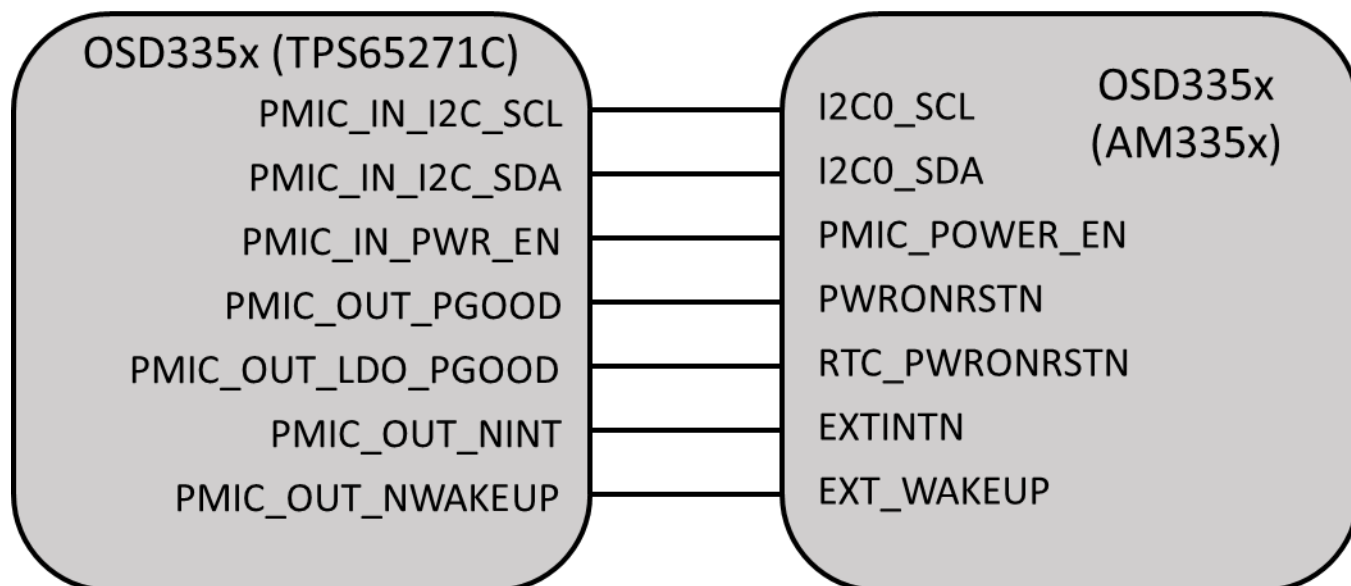

Figure 7.1. OSD335x Minimum Signal Connections with RTC enabled

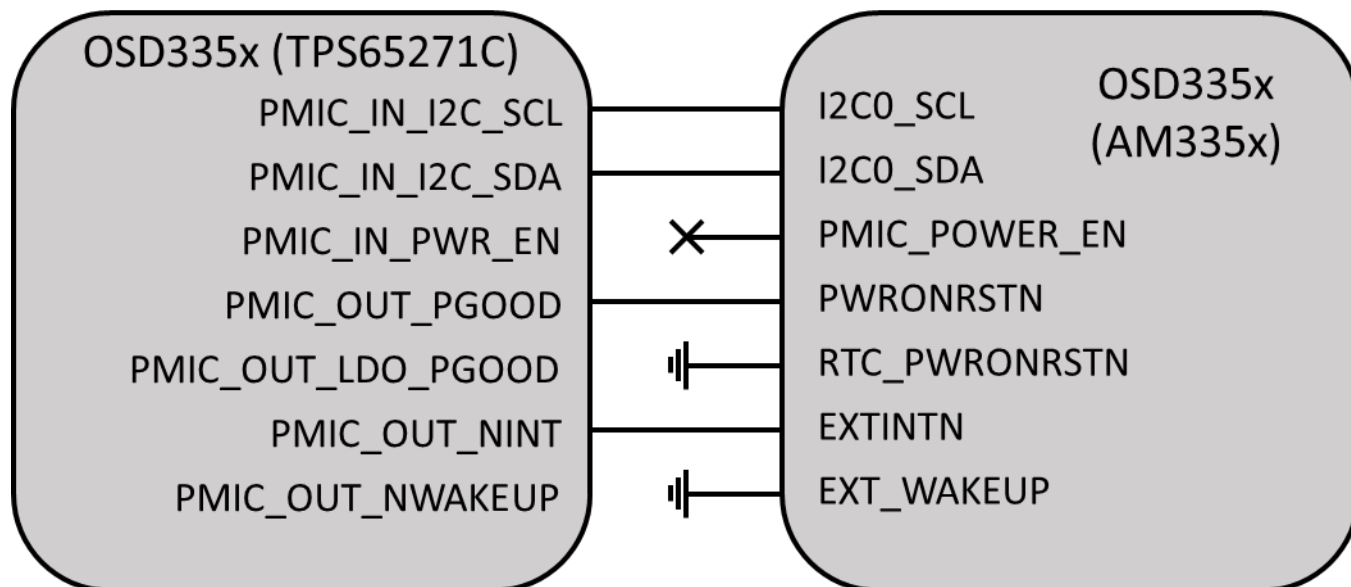

Figure 7.2. OSD335x Minimum Signal Connections with RTC disabled

### 7.5.2 Minimum RTC Power Connections

Table 7.2 lists RTC domain signals required to operate the OSD335x-SM. In addition to the required connections described in Section 7.5.1, Figure 7.3 and Figure 7.4 illustrate additional connections with RTC subsystem enabled and disabled respectively. These connections are also included in the minimum required circuitry to operate the device.

Table 7.2. OSD335x-SM RTC Signal Descriptions

Signal	Description	Notes
CAP_VDD_RTC	Supply voltage for the RTC core domain	
RTC_KALDO_ENN	Active low enable input for internal CAP_VDD_RTC voltage regulator	
RTC_PWRONRSTN	RTC_PWRONRSTN to AM335x	
PMIC_POWER_EN	PMIC Power Enable from AM335x	
EXT_WAKEUP	EXT_WAKEUP to AM335x	1

1. See Table 2-3 for pull up on this signal

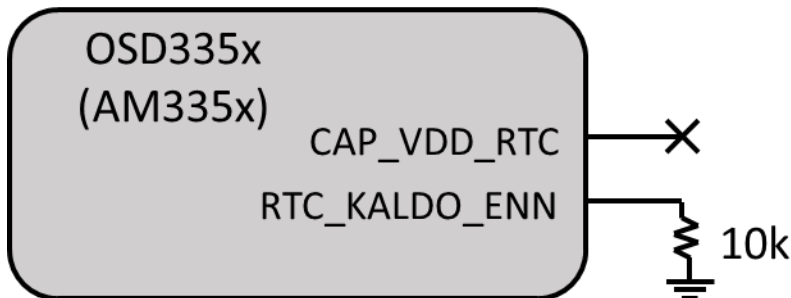

Figure 7.3. Additional connections for OSD335x with RTC enabled

Figure 7.4. Additional connections for OSD335x with RTC disabled

# OSD335x Family

Rev. 15 3/19/2019

## 8 Electrical & Thermal Characteristics

Table 8.1 lists electrical and thermal characteristic parameters of the OSD3358.

Table 8.1. OSD335x Absolute Maximum Ratings over operating free-air temperature range (unless otherwise noted)  
(1) (2)

		Value	Unit
Supply voltage range (with respect to VSS)	VIN_BAT	-0.3 to 7	V
	VIN_USB, VIN_AC	-0.3 to 7	
Input/Output voltage range (with respect to VSS)	All pins unless specified separately	-0.3 to 3.6	V
Terminal current	SYS_VOUT, VIN_USB, VIN_BAT	3000	mA
T <sub>c</sub> Operating case temperature	Commercial (BAS)	0 to 85	°C
	Industrial (IND)	-40 to 85	°C
T <sub>stg</sub> Storage temperature		-40 to 125	°C
ESD rating	(HBM) Human body model	±2000	V
	(CDM) Charged device model	±500	

- (1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions is not implied. Exposure to absolute maximum rated conditions for extended periods may affect device reliability.
- (2) All voltage values are with respect to network ground terminal.

Table 8.2. Recommended Operating Conditions over operating free-air temperature range (unless otherwise noted)

	Min	Nom	Max	Unit
Supply voltage, VIN_USB, VIN_AC	4.3		5.8	V
Supply voltage, VIN_BAT	2.75		5.5	V
Input current from VIN_AC			2.0	A
Input current from VIN_USB			1.3	A
VIN_BAT current			2.0	A
Output voltage range for SYS_VDD1_3P3V		3.4		V
Output voltage range for SYS_VDD2_3P3V		3.3		V
Output voltage range for SYS_RTC_1P8V		1.8		V
Output voltage range for SYS_VDD_1P8V		1.8		V
Output voltage range for SYS_ADC_1P8V		1.8		V
Output voltage range for VDDSD_DDR <sup>1</sup>		1.5		V
Output voltage range for VDD_MPU <sup>1</sup>		1.1		V
Output voltage range for VDD_CORE <sup>1</sup>		1.1		V
Output voltage range for VDDSD_PLL <sup>1</sup>		1.8		V
Output voltage range for VDDSHV_3P3V <sup>1</sup>		3.3		V
Output current for SYS_VOUT <sup>2</sup>	0		500	mA
Output current for SYS_VDD1_3P3V <sup>2</sup>	0		500	mA
Output current for SYS_VDD2_3P3V <sup>2</sup>	0		100	mA
Output current for SYS_RTC_1P8V <sup>2</sup>	0		100	mA
Output current for SYS_VDD_1P8V <sup>2</sup>	0		250	mA
Output current for SYS_ADC_1P8V <sup>2</sup>	0		25	mA

- (1) These voltage rails are for reference only and should not be used to power anything on the PCB.
- (2) Please note that the total input current on VIN\_AC, VIN\_USB or VIN\_BAT must not exceed the recommended maximum value even if individual currents drawn from these power supply outputs are less than or equal to the maximum recommended operating output currents. See section 7.4 for more details.

## 9 Packaging Information

The OSD335x is packaged in a 400 ball, Ball Grid Array (BGA). The package size is 27 X 27 millimeters with a ball pitch of 1.27mm. This section will give you the specifics on the package.

### 9.1 Mechanical Dimensions

The mechanical drawings of the OSD335x show pin A1 in the lower left hand corner when looking at the top view of the device. Pin A1 is in the upper left hand corner if looking at the balls from the bottom view of the package. The PCB layout should have pin A1 in the lower left hand corner when looking at the top side of the PCB where the OSD335x will be attached.

#### NOTES:

- ⚠ DIMENSION b IS MEASURED AT THE MAXIMUM SOLDER BALL DIAMETER, PARALLEL TO DATUM PLANE C.
- ⚠ DATUM C (SEATING PLANE) IS DEFINED BY THE SPHERICAL CROWNS OF THE SOLDER BALLS.
- ⚠ PARALLELISM MEASUREMENT SHALL EXCLUDE ANY EFFECT OF MARK ON TOP SURFACE OF PACKAGE.

## OSD335x Family

Rev. 15 3/19/2019

### 9.2 Reflow Instructions

The reflow profile for this package should be in accordance with the Lead-free process for BGA. A peak reflow temperature is recommended to be 245°C.

Texas Instruments provides a good overview of Handling & Process Recommendations in AN-2029 for this type of device. A link to the document can be found in the Reference Documents section of this document.

### 9.3 Storage Recommendations

The OSD335x Family of devices are sensitive to moisture and need to be handled in specific ways to make sure they function properly during and after the manufacturing process. The OSD335x Family of devices are rated with a Moisture Sensitivity Level (MSL) of 4. This means that they are typically stored in a sealed Dry Pack.

Once the sealed Dry Pack is opened the OSD335x needs to be used within 72 hours to avoid further processing. If the OSD335x has been exposed for more than 72 hours, then it is required that you bake the device for 34 hours at 125°C before using.

Alternatively, the devices could be stored in a dry cabinet with humidity <10% to avoid the baking requirement.

For more information, please refer to the Texas Instruments AN-2029 which can be found in the Reference Documents section of this document.

**Стандарт  
Электрон  
Связь**

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
