

# SPREAD SPECTRUM CLOCK SYNTHESIZER

IDT5P50911/2/3/4

## Description

The IDT5P50911/2/3/4 is a family of 1.8V/2.5V/3.3V low power, spread spectrum clock generators capable of reducing EMI radiation from an input clock. Spread spectrum technique is capable of reducing the harmonic frequency amplitude peaks by several dB.

## Ordering Information

### Output Frequency

5 to 15 MHz - 5P50911NBGI/5P50911DVGI  
 10 to 30 MHz - 5P50912NBGI/5P50912DVGI  
 20 to 60 MHz - 5P50913NBGI/5P50913DVGI  
 40 to 120 MHz - 5P50914NBGI/5P50914DVGI

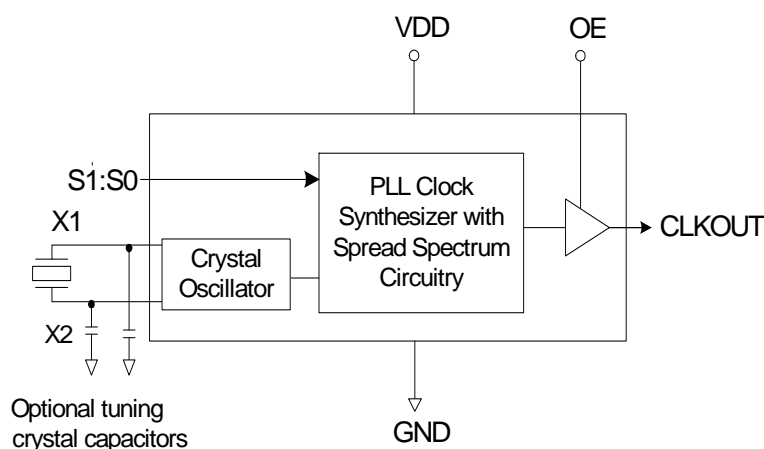

## Features

- 8-pin DFN package (2x2mm)  
8-pin MSOP package (3x4.9mm)
- Provides a spread spectrum output clock
- Crystal input frequency range of 10 to 30 MHz
- Output frequency range of 10 to 120 MHz
- Center and down spread
- Peak reduction by 8 dB to 16 dB typical on 3rd through 19th odd harmonics
- Low EMI feature can be disabled
- Operating voltage of 1.8 V, 2.5 or 3.3V
- RoHS 6 compliant package

## Spread Modulation Frequency Table

Part Number	Output Multiply	Input (MHz)	Modulation (kHz)	Input (MHz)	Modulation (kHz)	Modulation Frequency (kHz)
5P50911	1/2x	10	27	30	81	Input frequency *27/10000
5P50912	1x					
5P50913	2x					
5P50914	4x

## Spread Direction and Percentage Select Table

S1	S0	Spread Direction	Spread Percentage
0	0	OFF	--
0	1	Center	$\pm 0.5$
1	0	Center	$\pm 1.5$
1	1	Down	-0.5

## Pin Description

Pin Number	Pin Name	Pin Type	Pin Description
1	X1	XI	Crystal input. Connect this pin to a crystal.
2	VDD	Power	Voltage supply. Connect to 1.8 V $\pm 0.1$ V, 2.5 V $\pm 10\%$ or 3.3 V $\pm 10\%$ .
3	OE	Input	Output enable. Tri-states CLK output when low. Internal pull-up.
4	S0	Input	Function select 0 input. Selects spread amount and direction per table above. Internal pull-down resistor.
5	S1	Input	Function select 1 input. Selects spread amount and direction per table above. Internal pull-down resistor.
6	CLKOUT	Output	Clock output. Weak pull-down when OE low.
7	GND	Power	Connect to ground.
8	X2	XO	Crystal output. Connect this pin to a crystal.

## External Components

### Decoupling Capacitor

As with any high-performance mixed-signal IC, the IDT5P50911/2/3/4 must be isolated from system power supply noise to perform optimally.

A decoupling capacitor of 0.01 $\mu$ F must be connected between each VDD and the PCB ground plane.

### Series Termination Resistor

Clock output traces over one inch should use series termination. To series terminate a 50 $\Omega$  trace (a commonly used trace impedance), place a 33 $\Omega$  resistor in series with the clock line, as close to the clock output pin as possible. The nominal impedance of the clock output is 20 $\Omega$ .

### Crystal Load Capacitors

The device crystal connections should include pads for small capacitors from X1 to ground and from X2 to ground. These capacitors are used to adjust the stray capacitance of the board to match the nominally required crystal load capacitance. Because load capacitance can only be increased in this trimming process, it is important to keep stray capacitance to a minimum by using very short PCB traces (and no vias) between the crystal and device. Crystal capacitors, if needed, must be connected from each of the pins X1 and X2 to ground.

The value (in pF) of these crystal caps should equal  $(C_L - 12 \text{ pF}) \times 2$ . In this equation,  $C_L$  = crystal load capacitance in pF. Example: For a crystal with a 16 pF load capacitance, each crystal capacitor would be 8 pF  $[(16 - 12) \times 2 = 8]$ .

### PCB Layout Recommendations

For optimum device performance and lowest output phase noise, the following guidelines should be observed.

1) The 0.01 $\mu$ F decoupling capacitors should be mounted on the component side of the board as close to the VDD pin as possible. No vias should be used between the decoupling capacitors and VDD pins. The PCB trace to VDD pins should be kept as short as possible, as should the PCB trace to the ground via.

2) To minimize EMI, the 33 $\Omega$  series termination resistor (if needed) should be placed close to the clock output.

3) An optimum layout is one with all components on the same side of the board, minimizing vias through other signal layers. Other signal traces should be routed away from the IDT5P50911/2/3/4. This includes signal traces just underneath the device, or on layers adjacent to the ground plane layer used by the device.

### Spread Spectrum Profile

The IDT5P50911/2/3/4 is a low EMI clock generator using an optimized frequency slew rate algorithm to facilitate downstream tracking of zero delay buffers and other PLL devices.

The modulation rate is directly related to the input crystal frequency.

For input frequency ICLK, then use the modulation frequency indicated for the part below.

$$\text{Modulation Frequency} = \text{Input Frequency} / 10000$$

Ex. Input Frequency = 20 MHz

$$\text{Modulation Frequency} = 20 \text{ MHz} / 10000 = 2 \text{ kHz}$$

## Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the IDT5P50911/2/3/4. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
