No.10049EBT15

Description

General purpose BA10393/BA10339 family and high reliability BA2903S/BA2903/BA2901S/BA2901 family and automotive BA2903HFVM-C integrate two or four independent high gain voltage comparator. Some features are the wide operating voltage that is 2 to 36[V] (for BA10393, BA2903S, BA2903, BA2901S, BA2901 family, BA2903HFVM-C), 3 to 36[V] (for BA10339 family) and low supply current. Therefore, this series is suitable for any application.

Characteristics

- Operable with a single power supply
- Wide operating supply voltage

+2.0[V] ~ +36.0[V] (single supply)	{ BA10393 family }
±1.0[V] ~ ±18.0[V] (dual supply)	
+3.0[V] ~ +36.0[V] (single supply)	{ BA10339 family }
±1.5[V] ~ ±18.0[V] (dual supply)	
+2.0[V] ~ +36.0[V] (single supply)	{ BA2903S/BA2901S family BA2903 /BA2901 family BA2903H }
±1.0[V] ~ ±18.0[V] (dual supply)	
- Standard comparator pin-assignments
- Input and output are operable GND sense
- Internal ESD protection
Human body model (HBM) ±5000[V] (Typ.)
(BA2903S/BA2903/BA2901S/BA2901 family, BA2903HFVM-C)
- Gold PAD
(BA2903S/BA2903/BA2901S/BA2901 family, BA2903HFVM-C)
- Wide temperature range

-40[°C] ~ +125[°C]	(BA2903/BA2901 family, BA2903HFVM-C)
-40[°C] ~ +105[°C]	(BA2903S/BA2901S family)
-40[°C] ~ +85[°C]	(BA10393/BA10339 family)

●Absolute Maximum Ratings (Ta=25[°C])

Parameter	Symbol	Rating					Unit
		BA10393 family	BA10339 family	BA2903S family BA2901S family	BA2903 family BA2901 family	BA2903H family	
Supply Voltage	VCC-VEE	+36					V
Differential Input Voltage ^(*)	Vid	VCC-VEE			36		V
Input Common-mode Voltage Range	Vicm	VEE~VCC			(VEE-0.3)~VEE+36		V
Operating Temperature Range	Topr	-40~+85			-40~+105	-40~+125	°C
Storage Temperature Range	Tstg	-55~+125			-55~+150		°C
Maximum junction Temperature	Tjmax	+125			+150		°C

Note Absolute maximum rating item indicates the condition which must not be exceeded.

Application if voltage in excess of absolute maximum rating or use out of absolute maximum rated temperature environment may cause deterioration of characteristics.

(*) The voltage difference between inverting input and non-inverting input is the differential input voltage.
Then input terminal voltage is set to more than VEE.

●Electric Characteristics

OBA10393 family (Unless otherwise specified VCC=+5[V], VEE=0[V], Ta=25[°C])

Parameter	Symbol	Temperature range	Guaranteed limit			Unit	Condition
			Min.	Typ.	Max.		
Input Offset Voltage	Vio	25°C	-	±1	±5	mV	VOUT=1.4[V]
Input Offset Current	Iio	25°C	-	±5	±50	nA	VOUT=1.4[V]
Input Bias Current ^(*)	Ib	25°C	-	50	250	nA	VOUT=1.4[V]
Input Common-mode Voltage Range	Vicm	25°C	0	-	VCC-1.5	V	-
Large Signal Voltage Gain	AV	25°C	93	106	-	dB	RL=15[kΩ], VCC=15[V]

●Description of electrical characteristics

Described below are descriptions of the relevant electrical terms.

Please note that item names, symbols, and their meanings may differ from those on another manufacturer's documents.

1. Absolute maximum ratings

The absolute maximum ratings are values that should never be exceeded, since doing so may result in deterioration of electrical characteristics or damage to the part itself as well as peripheral components.

1.1 Power supply voltage (VCC/VEE)

Expresses the maximum voltage that can be supplied between the positive and negative power supply terminals without causing deterioration of the electrical characteristics or destruction of the internal circuitry.

1.2 Differential input voltage (Vid)

Indicates the maximum voltage that can be supplied between the non-inverting and inverting terminals without damaging the IC.

1.3 Input common-mode voltage range (Vicm)

Signifies the maximum voltage that can be supplied to non-inverting and inverting terminals without causing deterioration of the electrical characteristics or damage to the IC itself. Normal operation is not guaranteed within the input common-mode voltage range of the maximum ratings – use within the input common-mode voltage range of the electric characteristics instead.

1.4 Power dissipation (Pd)

Indicates the power that can be consumed by a particular mounted board at ambient temperature (25°C).
For packaged products, Pd is determined by maximum junction temperature and the thermal resistance.

2. Electrical characteristics

2.1 Input offset voltage (Vio)

Signifies the voltage difference between the non-inverting and inverting terminals. It can be thought of as the input voltage difference required for setting the output voltage to 0V.

2.2 Input offset current (Iio)

Indicates the difference of the input bias current between the non-inverting and inverting terminals.

2.3 Input bias current (Ib)

Denotes the current that flows into or out of the input terminal, it is defined by the average of the input bias current at the non-inverting terminal and the input bias current at the inverting terminal.

2.4 Input common-mode voltage range (Vicm)

Indicates the input voltage range under which the IC operates normally.

2.5 Large signal voltage gain (AV)

The amplifying rate (gain) of the output voltage against the voltage difference between the non-inverting and inverting terminals, it is (normally) the amplifying rate (gain) with respect to DC voltage.
 $AVD = (\text{output voltage fluctuation}) / (\text{input offset fluctuation})$

2.6 Circuit current (ICC)

Indicates the current of the IC itself that flows under specific conditions and during no-load steady state.

2.7 Output sink current (IOL)

Denotes the maximum current that can be output under specific output conditions.

2.8 Output saturation voltage low level output voltage (VOL)

Signifies the voltage range that can be output under specific output conditions.

2.9 Output leakage current (ILeak)

Indicates the current that flows into the IC under specific input and output conditions.

2.10 Response time (tre)

The interval between the application of input and output conditions.

2.11 Common-mode rejection ratio (CMRR)

Denotes the ratio of fluctuation of the input offset voltage when the in-phase input voltage is changed (DC fluctuation).
 $CMRR = (\text{change of input common-mode voltage}) / (\text{input offset fluctuation})$

2.12 Power supply rejection ratio (PSRR)

Signifies the ratio of fluctuation of the input offset voltage when the supply voltage is changed (DC fluctuation).
 $PSRR = (\text{change in power supply voltage}) / (\text{input offset fluctuation})$

●Derating curves

Power dissipation(total loss) indicates the power that can be consumed by IC at Ta=25°C(normal temperature).IC is heated when it consumed power, and the temperature of IC chip becomes higher than ambient temperature.The temperature that can be accepted by IC chip depends on circuit configuration, manufacturing process, and consumable power is limited. Power dissipation is determined by the temperature allowed in IC chip(maximum junction temperature) and thermal resistance of package(heat dissipation capability). The maximum junction temperature is typically equal to the maximum value in the storage temperature range. Heat generated by consumed power of IC radiates from the mold resin or lead frame of the package. The parameter which indicates this heat dissipation capability(hardness of heat release)is called thermal resistance, represented by the symbol θ_{ja} [°C/W].The temperature of IC inside the package can be estimated by this thermal resistance. Fig.91(a) shows the model of thermal resistance of the package. Thermal resistance θ_{ja} , ambient temperature Ta, junction temperature Tj, and power dissipation Pd can be calculated by the equation below:

$$\theta_{ja} = (T_j - T_a) / P_d \quad [^{\circ}\text{C/W}] \quad \cdots \cdots (I)$$

Derating curve in Fig.91(b) indicates power that can be consumed by IC with reference to ambient temperature. Power that can be consumed by IC begins to attenuate at certain ambient temperature. This gradient iis determined by thermal resistance θ_{ja} . Thermal resistance θ_{ja} depends on chip size, power consumption, package,ambient temperature, package condition, wind velocity, etc even when the same of package is used. Thermal reduction curve indicates a reference value measured at a specified condition. Fig.92(a)~(d) show a derating curve for an example of BA10393, BA10339, BA2903S, BA2903, BA2903HFVM-C,BA2901S, BA2901.

(*5)	(*6)	(*7)	(*8)	(*9)	(*10)	(*11)	(*12)	(*13)	Unit
6.2	7.0	4.9	6.2	5.5	4.7	7.0	5.3	4.9	[mW/°C]

When using the unit above Ta=25[°C], subtract the value above per degree[°C]. Permissible dissipation is the value when glass epoxy board 70[mm]×70[mm]×1.6[mm](cooper foil area below 3[%]) is mounted.

Fig.92 Derating curve

●Precautions

1) Unused circuits

When there are unused circuits it is recommended that they be connected as in Fig.93, setting the non-inverting input terminal to a potential within the in-phase input voltage range (VICR).

2) Input terminal voltage

(BA2903S/BA2903/BA2901S/BA2901 family, BA2903HFVM-C)Applying VEE + 36V to the input terminal is possible without causing deterioration of the electrical characteristics or destruction, irrespective of the supply voltage. However, this does not ensure normal circuit operation.

Please note that the circuit operates normally only when the input voltage is within the common mode input voltage range of the electric characteristics.

Fig.93 Disable circuit example

3) Power supply (single / dual)

The op-amp operates when the specified voltage supplied is between VCC and VEE. Therefore, the single supply op-amp can be used as a dual supply op-amp as well.

4) Power dissipation Pd

Using the unit in excess of the rated power dissipation may cause deterioration in electrical characteristics due to a rise in chip temperature, including reduced current capability.

Therefore, please take into consideration the power dissipation (Pd) under actual operating conditions and apply a sufficient margin in thermal design. Refer to the thermal derating curves for more information.

5) Short-circuit between pins and erroneous mounting

Incorrect mounting may damage the IC. In addition, the presence of foreign particles between the outputs, the output and the power supply, or the output and GND may result in IC destruction.

6) Terminal short-circuits

When the output and VCC terminals are shorted, excessive output current may flow, resulting in undue heat generation and, subsequently, destruction.

7) Operation in a strong electromagnetic field

Operation in a strong electromagnetic field may cause malfunctions.

8) Radiation

This IC is not designed to withstand radiation.

9) IC handling

Applying mechanical stress to the IC by deflecting or bending the board may cause fluctuations in the electrical characteristics due to piezoelectric (piezo) effects.

10) Board inspection

Connecting a capacitor to a pin with low impedance may stress the IC.

Therefore, discharging the capacitor after every process is recommended. In addition, when attaching and detaching the jig during the inspection phase, ensure that the power is turned off before inspection and removal.

Furthermore, please take measures against ESD in the assembly process as well as during transportation and storage.

Notes

No copying or reproduction of this document, in part or in whole, is permitted without the consent of ROHM Co.,Ltd.

The content specified herein is subject to change for improvement without notice.

The content specified herein is for the purpose of introducing ROHM's products (hereinafter "Products"). If you wish to use any such Product, please be sure to refer to the specifications, which can be obtained from ROHM upon request.

Examples of application circuits, circuit constants and any other information contained herein illustrate the standard usage and operations of the Products. The peripheral conditions must be taken into account when designing circuits for mass production.

Great care was taken in ensuring the accuracy of the information specified in this document. However, should you incur any damage arising from any inaccuracy or misprint of such information, ROHM shall bear no responsibility for such damage.

The technical information specified herein is intended only to show the typical functions of and examples of application circuits for the Products. ROHM does not grant you, explicitly or implicitly, any license to use or exercise intellectual property or other rights held by ROHM and other parties. ROHM shall bear no responsibility whatsoever for any dispute arising from the use of such technical information.

The Products specified in this document are intended to be used with general-use electronic equipment or devices (such as audio visual equipment, office-automation equipment, communication devices, electronic appliances and amusement devices).

The Products specified in this document are not designed to be radiation tolerant.

While ROHM always makes efforts to enhance the quality and reliability of its Products, a Product may fail or malfunction for a variety of reasons.

Please be sure to implement in your equipment using the Products safety measures to guard against the possibility of physical injury, fire or any other damage caused in the event of the failure of any Product, such as derating, redundancy, fire control and fail-safe designs. ROHM shall bear no responsibility whatsoever for your use of any Product outside of the prescribed scope or not in accordance with the instruction manual.

The Products are not designed or manufactured to be used with any equipment, device or system which requires an extremely high level of reliability the failure or malfunction of which may result in a direct threat to human life or create a risk of human injury (such as a medical instrument, transportation equipment, aerospace machinery, nuclear-reactor controller, fuel-controller or other safety device). ROHM shall bear no responsibility in any way for use of any of the Products for the above special purposes. If a Product is intended to be used for any such special purpose, please contact a ROHM sales representative before purchasing.

If you intend to export or ship overseas any Product or technology specified herein that may be controlled under the Foreign Exchange and the Foreign Trade Law, you will be required to obtain a license or permit under the Law.

Thank you for your accessing to ROHM product informations.
More detail product informations and catalogs are available, please contact us.

ROHM Customer Support System

**Стандарт
Электрон
Связь**

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
