Diode Model

$$Vf_T = V_T + I_f \cdot R_T$$

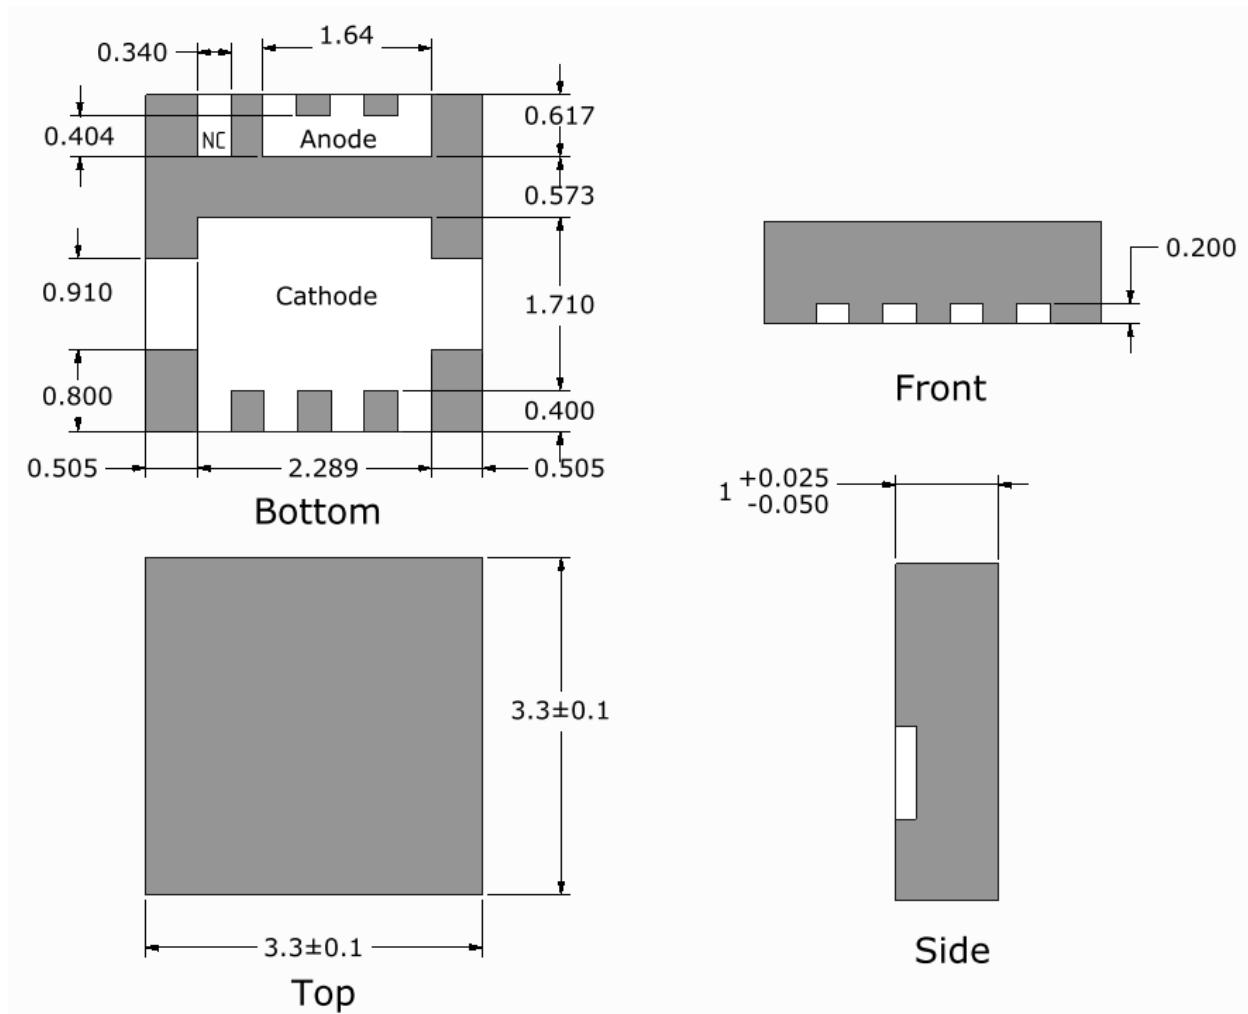

$$V_T = 0.99 + (T_j * -1.5 * 10^{-3})$$

$$R_T = 0.22 + (T_j * 2.6 * 10^{-3})$$

Note: T_j = Diode Junction Temperature In Degrees Celsius

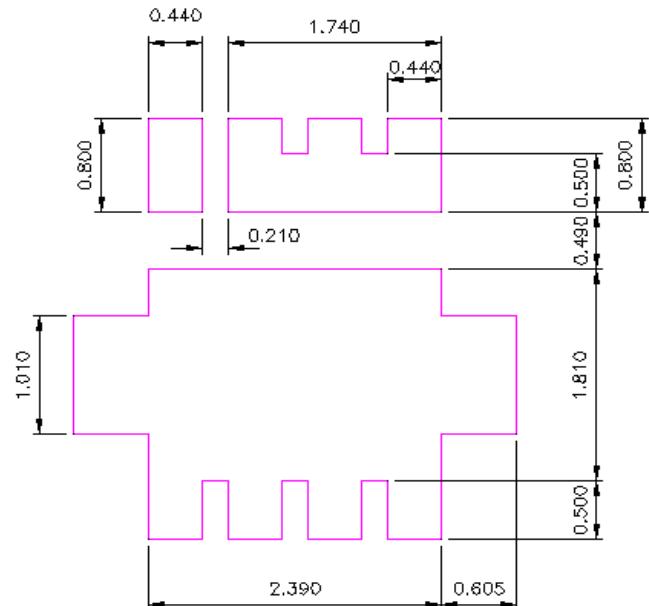

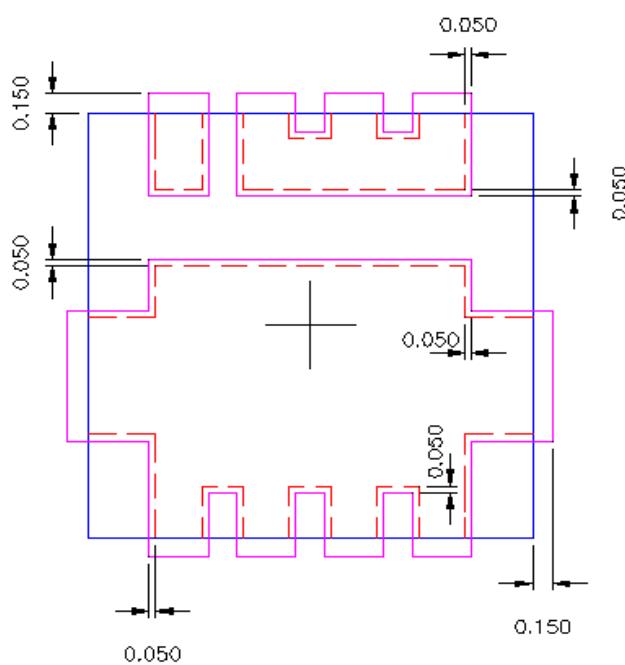

Package Dimensions

Package QFN 3.3

All Dimensions are in mm
 Tolerances are 0.05 mm if not specified
 NC = No Connect

Recommended Landing Pattern (All Dimensions are in mm)

Note: The design of the land pattern and the size of the thermal pad depend mainly on the thermal characteristic and power dissipation. In general, the size of the thermal pad should be as close to the exposed pad of the package as possible, provided that there is no bridging between the thermal pad and the lead pads.

The 0.050mm extra length and width provides space to accommodate the placement tolerance of the component during pick and place process. The 0.150mm along the perimeter present areas for solder to form fillet along the side metal edges of the package.
