

## SY89858U

### Precision Low Power 1:8 LVPECL Fanout Buffer with Internal Termination

#### General Description

The SY89858U is a 2.5V/3.3V precision, high-speed, fully differential LVPECL 1:8 fanout buffer optimized to provide eight identical output copies with less than 30ps of skew and less than 10ps<sub>pp</sub> total jitter. It can process clock signals as fast as 2.0GHz.

The differential input includes Micrel's unique, 3-pin input termination architecture that allows the SY89858U to directly interface to LVPECL, CML, and LVDS differential signals (AC- or DC-coupled) as small as 100mV without any level shifting or termination resistor networks in the signal path. The result is a clean, stub-free, low-jitter interface solution. The LVPECL (100k temperature compensated) outputs feature 800mV typical swing into 50Ω loads, and provide fast rise/fall times guaranteed to be less than 200ps.

The SY89858U operates from a 2.5V ±5% supply or 3.3V ±10% supply and is guaranteed over the full industrial temperature range of -40°C to +85°C. For applications that require a higher speed fanout buffer, consider the SY58032U. The SY89858U is part of Micrel's high-speed, Precision Edge<sup>®</sup> product line. #### Features

- Precision 1:8, LVPECL fanout buffer
- Low power: 238mW (2.5V)
- Guaranteed AC performance over temperature and supply voltage:
  - Wide operating frequency: DC to 2.0GHz
  - <380ps In-to-Out  $t_{pd}$
  - <200ps  $t_r/t_f$
  - <30ps skew
- Ultra-low jitter design:
  - <1ps<sub>RMS</sub> random jitter
  - <1ps<sub>RMS</sub> cycle-to-cycle jitter
  - <10ps<sub>pp</sub> total jitter
- 100k LVPECL compatible outputs
- Fully differential inputs/outputs
- Accepts an input signal as low as 100mV (200mV<sub>pp</sub>)
- Unique patent pending input termination and VT pin accepts DC-coupled and AC-coupled differential inputs (LVPECL, LVDS, and CML)
- Power supply 2.5V ±5% or 3.3V ±10%
- -40°C to +85°C industrial temperature range
- Available in 32-pin (5mm x 5mm) MLF<sup>®</sup> package

#### Applications

- All SONET and GigE clock distribution
- All Fibre Channel clock and data distribution
- Network routing engine timing distribution
- High-end, low-skew multiprocessor synchronous clock distribution

#### Markets

- LAN/WAN
- Enterprise servers
- ATE
- Test and measurement

### Pin Configuration

32-Pin MLF<sup>®</sup> (MLF-32)

### Pin Description

Pin Number	Pin Name	Pin Function
3, 6	IN, /IN	Differential Input: This differential input accepts AC- or DC-coupled signals as small as 100mV (200mV <sub>PP</sub> ). Each pin of this pair internally terminates to a VT pin through 50Ω. Note that these inputs will default to an indeterminate state if left open. Please refer to the “Input Interface Applications” section for more details.
4	VT	Input Termination Center-Tap: Each side of the differential input pair terminates to this VT pin. The VT pin provides a center-tap to a termination network for maximum interface flexibility. See the “Input Interface Applications” section for more details.
5	VREF-AC	Reference Voltage: This output biases to V <sub>CC</sub> -1.2V (typical). It is used for AC-coupling inputs IN and /IN. Connect VREF-AC directly to the corresponding VT pin. Bypass with 0.01μF low ESR capacitor to V <sub>CC</sub> . Maximum sink/source capability is 1.5mA.
1, 8, 9, 16, 18, 23, 25, 32	VCC	Positive Power Supply: Bypass with 0.1mF//0.01mF low ESR capacitors as close to the VCC pins as possible.
31, 30, 29, 28, 27, 26, 22, 21, 20, 19, 15, 14, 13, 12, 11, 10	Q0, /Q0, Q1, /Q1, Q2, /Q2, Q3, /Q3, Q4, /Q4, Q5, /Q5, Q6, /Q6, Q7, /Q7	100k LVPECL Differential Outputs: Differential buffered output copy of the input signal. The LVPECL output swing is typically 800mV into 50Ω to V <sub>CC</sub> -2V. Unused output pairs may be left floating with no impact on jitter. See “LVPECL Output” section.
2, 7, 17, 24	GND Exposed Pad	Ground: Ground pins and exposed pad must be connected to the same ground plane.

**Notes:**

1. Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum ratings conditions for extended periods may affect device reliability.
2. The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.
3. Due to the limited drive capability use for input of the same package only.
4. Package Thermal Resistance assumes exposed pad is soldered (or equivalent) to the devices most negative potential on the PCB.  $\theta_{JA}$  and  $\psi_{JB}$  values are determined for a 4-layer board in still air, unless otherwise stated.
5. The circuit is designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.

### Notes:

- High-frequency AC-parameters are guaranteed by design and characterization.
- Output-to-output skew is measured between outputs under identical conditions.
- Part-to-part skew is defined for two parts with identical power supply voltages at the same temperature and with no skew of the edges at the respective inputs. Part-to-part skew includes variation in  $t_{pd}$ .
- Random jitter is measured with a K28.7 character pattern, measured at 2.5Gbps.
- Deterministic Jitter is measured at 2.5Gbps, with both K28.5 and  $2^{23} - 1$  PRBS pattern.
- Cycle-to-cycle jitter definition: The variation of periods between adjacent cycles,  $T_n - T_{n-1}$  where T is the time between rising edges of the output signal.
- Total jitter definition: With an ideal clock input of frequency  $< f_{MAX}$ , no more than one output edge in  $10^{12}$  output edges will deviate by more than the specified peak-to-peak jitter value.

### LVPECL Output Interface Applications

LVPECL has high input impedance, and very low output impedance (open emitter), and small signal swing which results in low EMI. LVPECL is ideal for driving 50Ω and 100Ω controlled impedance transmission lines. There are several techniques for terminating the LVPECL output: Parallel

Termination-Thevenin Equivalent, Parallel Termination (3-resistor), and AC-coupled Termination. Unused output pairs may be left floating. However, single-ended outputs must be terminated, or balanced.

Figure 4a. Parallel Termination-Thevenin Equivalent

Notes:

1. Power-saving alternative to Thevenin termination.
2. Place termination resistors as close to destination inputs as possible.
3.  $R_b$  resistor sets the DC bias voltage, equal to  $V_T$ .
4. For 2.5V systems,  $R_b = 19\Omega$ , For 3.3V systems,  $R_b = 50\Omega$

## Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
