MEMORY CONSTITUTION

Address 000₁₆ to 11F₁₆ are assigned to the display RAM, address 120₁₆ to 128₁₆ are assigned to the display control registers. The internal circuit is reset and all display control registers (address 120₁₆ to 128₁₆) are set to "0" and display RAM (address 000₁₆ to 11F₁₆) are set to "FF₁₆" when the AC pin level is "L". Memory constitution is shown in Figure 1.

SCREEN CONSTITUTION

The screen lines and rows are determined from each address of the display RAM. The screen constitution is shown in Figure 2.

SERIAL DATA INPUT TIMING

- (1) Serial data should be input with the LSB first.
- (2) The address consists of 16 bits.
- (3) The data consists of 16 bits.
- (4) The 16 bits in the SCK after the CS signal has fallen are the address, and for succeeding input data, the address is incremented every 16 bits.

CHARACTER FONT

Images are composed on a 12×18 dot matrix, and characters can be linked vertically and horizontally with other characters to allow the display the continuous symbols.

Fig. 7 Example for displaying a continuous pattern after combining characters in the horizontal or vertical direction

Character code FF₁₆ is fixed as a blank without background.
Therefore, you cannot register a character font in this code.

Note for Supplying Power

Timing of power supplying to AC pin

The internal circuit of M35045-XXXSP/FP is reset when the level of the auto clear input pin \overline{AC} is "L". This pin is hysteresis input with the pull-up resistor. The timing about power supplying of AC pin is shown in Figure 10.

Timing of power supplying to V_{DD1} and V_{DD2} .

Supply power to V_{DD1} and V_{DD2} at the same time.

Fig. 10 Timing of power supplying to \overline{AC} pin

After supplying the power (V_{DD} and V_{SS}) to M35045-XXXSP/FP and the supply voltage becomes more than $0.8 \times V_{DD}$, it needs to keep V_{IL} time; t_w of the AC pin for more than 1ms.

Start inputting from microcomputer after AC pin supply voltage becomes more than $0.8 \times V_{DD}$ and keeping 200ms wait time.

PRECAUTION FOR USE

Notes on noise and latch-up

In order to avoid noise and latch-up, connect a bypass capacitor ($\approx 0.1\mu F$) directly between the V_{DD1} pin and V_{SS} pin, and the V_{DD2} pin and V_{SS} pin using a heavy wire.
