### Functional Diagram

### General Description

The HMC705LP4(E) is a low noise GaAs HBT programmable divider in a 4x4 mm leadless surface mount package. The divider can be programmed to divide by any number from N = 1 to N = 17 up to 6.5 GHz. The HMC705LP4E's high frequency operation along with low phase noise floor is very useful in high performance fast settling synthesizer architectures. The HMC705LP4E may be combined with Hittite's Phase Frequency Detectors, VCOs and PLL ICs to create low noise, fast settling phase locked loops.

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and backside ground paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
