EVAL BOARD USER'S MANUAL

OVERVIEW

The NCN9252 is a DP3T switch for combined UART and USB 2.0 high-speed data applications. It allows portable systems to use a single external port to transmit and receive signals to and from three separate locations within the portable system. It is comprised of two switches, each with a single common I/O that alternates between three terminals. They are operated together to allow three data sources, such as a USB or UART transceiver, to pass differential data through a shared USB connector port.

The NCN9252 features low RON— 4 Ω (max) at 4.2 V V_{CC} , 5 Ω (typ) at a 3.3 V V_{CC} . It also features low CON,

< 30 pF (max) across the supply voltage range. This performance makes it ideal for both USB full-speed and high-speed applications that require both low RON and CON for effective signal transmission. The NCN9252 is capable of accepting control input signals down to 1.4 V, over a range of V_{CC} supply voltages with minimal leakage current. The NCN9252 is offered in a Pb-Free, 12 pin, 1.7 x 2.0 x 0.5 mm, UQFN package.

1	1	1S3	2S3

Get Started...

Equipment needed

- Power Supply
- 2 Banana Cables
- Computer
- USB Flash Drive
- USB Cable

Procedure

1. Set the power supply to 3.3 V. Connect the power supply from V_{CC} to GND using the banana cables. The supply current should be less than 1 μ A.
2. Connect the USB drive to the common I/O USB port, J1.
3. Connect the USB cable from the desired output port to the computer
4. Select the output port by moving the jumpers to the appropriate logic level for IN1 and IN2, as shown in the function table in Table 1.

PCB LAYOUT GUIDELINES

Electrical Layout Considerations

Implementing a high speed USB device requires paying attention on USB lines and traces to preserve signal integrity. The demonstration board serves as a layout example and can support the design engineers to preserve high speed performances.

Electrical layout guidelines are:

- The bypass capacitor must be placed as close as possible to the V_{CC} input pin for noise immunity.
- The characteristic impedance of each High Speed USB segment must be 45 Ω.

- The ground plane of the PCB will be used to determine the characteristic impedance of each line.
- All corresponding D+ / D- line segment pairs must be the same length.
- The use of vias to route these signals should be avoided when possible.
- The use of turns or bends to route these signal should be avoided when possible.

Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
