EV020-5-S-00D

85VAC~265VAC/50Hz, 18V/0.3A, 5V/0.1A Off-line Primary-side-Regulator, Dual Outputs Evaluation Board for Small Appliances

DESCRIPTION

The EV020-5-S-00D Evaluation Board is designed to demonstrate the capabilities of MP020-5. The MP020-5 is a primary-side-control regulator which can eliminates secondary feedback components.

The EV020-5-S-00D is typically designed for small appliances which output 18V/0.3A and 5V/0.1A load from 85VAC to 265VAC, 50HZ/60HZ.

The EV020-5-S-00D has an excellent efficiency and meets IEC61000-4-5 surge immunity and EN55022 conducted EMI requirements. It has multi-protection function as open circuit protection, short-circuit protection, cycle by cycle current limit and over-temperature protection, etc.

ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	V_{IN}	85 to 265	VAC
Output Voltage 1	V_{OUT1}	18	V
Output Current 1	I_{OUT1}	0.3	A
Output Voltage 2	V_{OUT2}	5	V
Output Current 2	I_{OUT2}	0.1	A
Output Power	P_{OUT}	5.9	W
Efficiency (full load)	η	>75	%

FEATURES

- Primary-Side–Control without Opto-Coupler or Secondary Feedback Circuit
- Precise Constant Voltage Control (CV)
- Integrated 700V MOSFET with Minimal External Components
- Variable, Off-Time, Peak-Current Control
- 550μA High-Voltage Current Source
- Programmable Cable Compensation (By adding 1μF/25V ceramic cap at CP pin)
- Multiple Protections: OVP, OCP, OCkP, OTP, and VCC UVLO
- Natural Spectrum Shaping for Improved EMI Signature
- Low Cost and Simple External circuit

APPLICATIONS

- Small Appliances

Warning: Although this board is designed to satisfy safety requirements, the engineering prototype has not been agency approved. Therefore, all testing should be performed using an isolation transformer to provide the AC input to the prototype board.

CIRCUIT DESCRIPTION

The EV020-5-S-00D is configured in a single-stage Flyback topology, it uses primary-side-control which can mostly simplify the schematic and get a cost effective BOM. It can also achieve accurate constant voltage and acceptable cross regulation.

FR1 and CR1 compose the input stage. FR1 is used to protect for the component failure or some excessive short events, also it can restrain the inrush current.

C1, L1 and C2 compose π filter to guarantee the conducted EMI meet standard EN55022. R1 paralleled with L1 is used to damp resonant between L1 and C1, C2. R2, R3, D1 and C3 compose the snubber circuit to reduce drain-source voltage spike.

R4, C5, C6 and D2 are used as Vcc power supply. C5 is high frequency decoupling capacitor and should be placed with Vcc pin as near as possible.

R5 and R6 are resistor divider for detecting output voltage by sampling voltage on primary auxiliary winding.

CY1 is Y capacitor lowering common mode noise to make sure there is enough EMI margin. T1 is power transformer, the structure of which is also very important to pass EMI test.

D3 is rectifier for 18V output. Schottky diode is recommended for better efficiency and regulation.C7 and R7 are composed snubber for D3, which is to restrain the voltage spike between D3.

C8 and C11 are output capacitors for 18V output. C8 should be low ESR electrolytic capacitor for better load regulation. C11 is ceramic capacitor to reduce high frequency voltage ripple. R9 is dummy load to lower the output voltage of 18V rail at no load condition.

D4 is rectifier for 5V output. Schottky diode is recommended for better efficiency and regulation. Due to the output current is low at this rail and there is no obvious spike on D4, so no RC snubber is needed.

C9 and C10 are output capacitors for 5V output. C9 should be low ESR electrolytic capacitor for better load regulation. C10 is ceramic capacitor to reduce high frequency voltage ripple. R8 is dummy load to lower the output voltage of 5V rail at no load condition.

Notes:

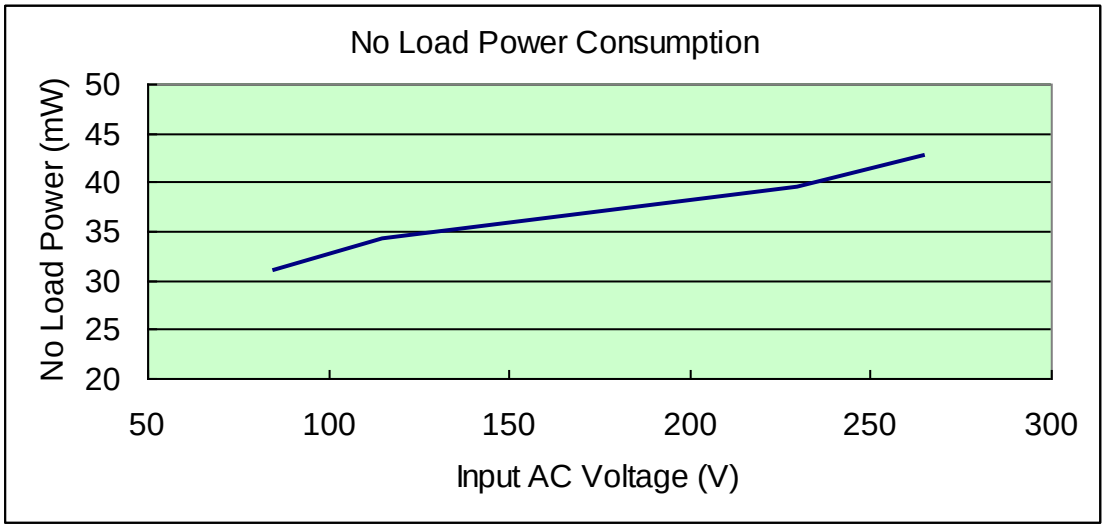
1. The red triangle means the worst case in table.

No Load Consumption



Electric Strength Test

Primary circuit to secondary circuit electric strength testing was completed according to IEC61000-4-2.

Input and output was shorted respectively. 3000VAC/50Hz sine wave applied between input and output for 1min, and operation was verified.

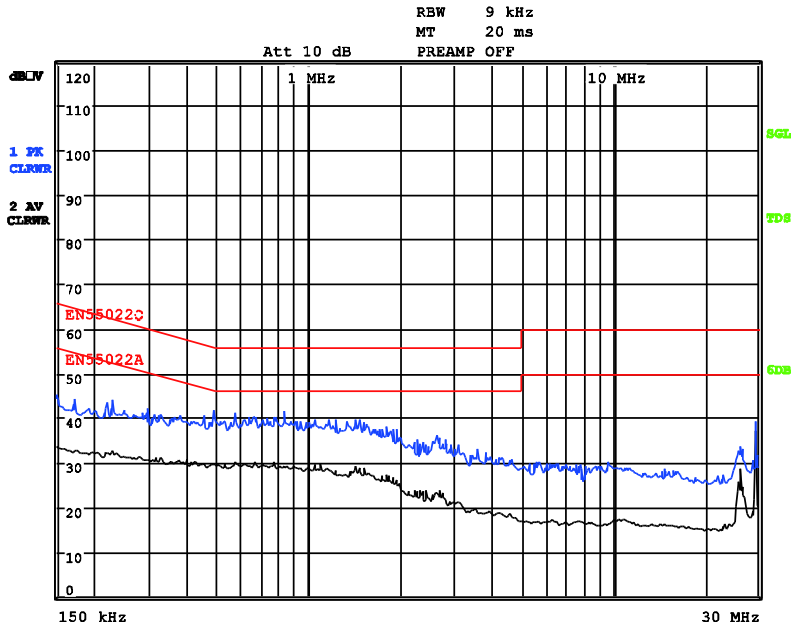
Surge Test

Line to Line 1kV and Line to Power Earth 1kV surge testing was completed according to IEC61000-4-5. Input voltage was set at 230VAC/50Hz. Output was loaded at full load and operation was verified following each surge event.

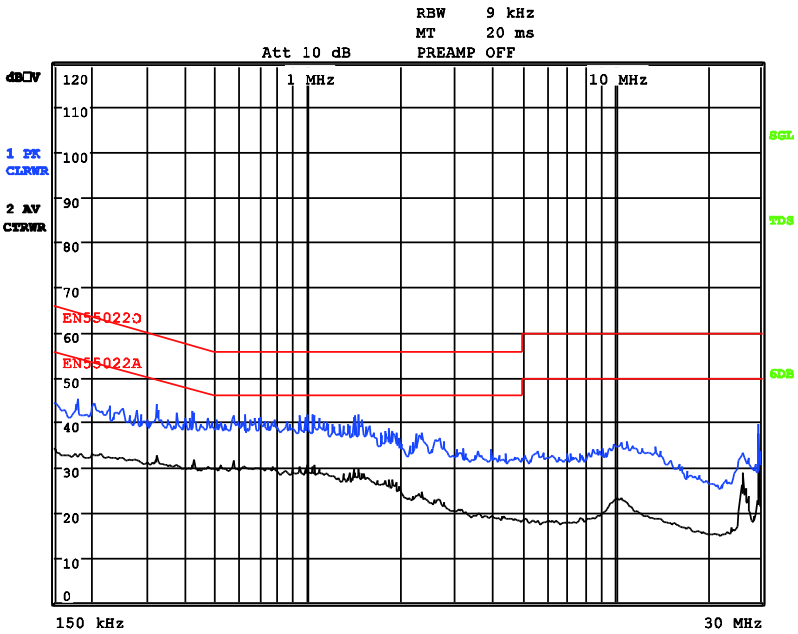
Surge Level (V)	Input Voltage (VAC)	Injection Location	Injection Phase (°)	Test Result (Pass/Fail)
1000	230	L to N	90	Pass
-1000	230	L to N	270	Pass
1000	230	L to PE	90	Pass
-1000	230	L to PE	270	Pass
1000	230	N to PE	90	Pass
-1000	230	N to PE	270	Pass

Conducted EMI Test

Test with 230Vac input and full load condition

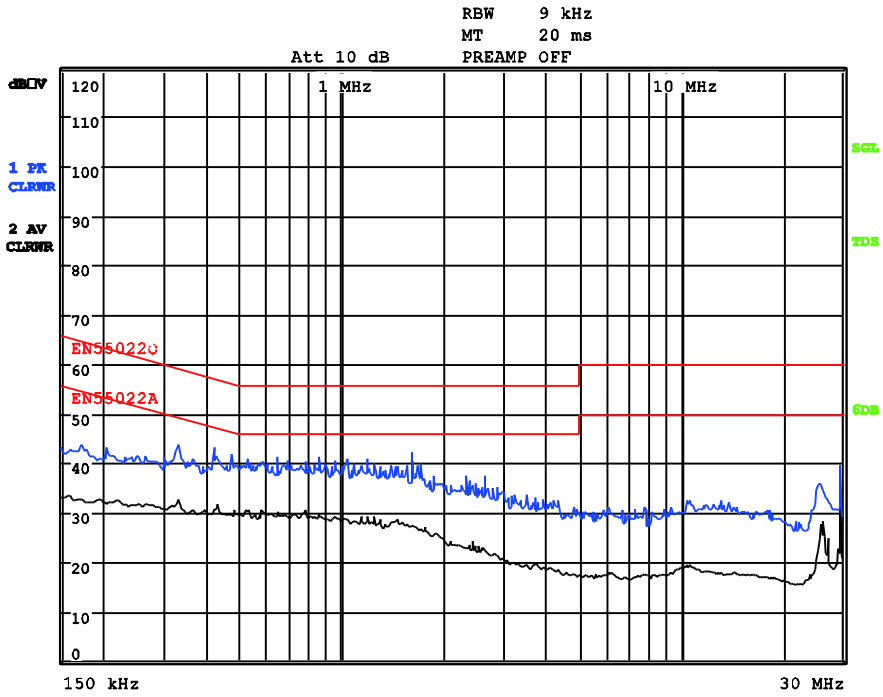


230Vac, 50Hz, Maximum Load, L Line, Output GND floats, EN55022 Limits

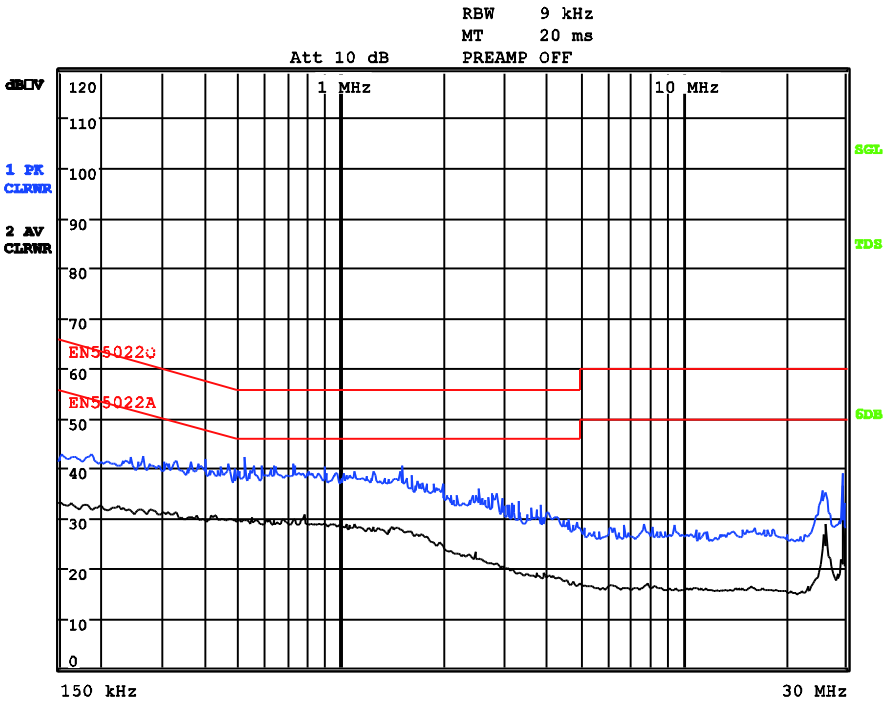


230Vac, 50Hz, Maximum Load, N Line, Output GND floats, EN55022 Limits

Test with 115Vac input and full load condition



115Vac, 60Hz, Maximum Load, L Line, Output GND floats, EN55022 Limits



115Vac, 60Hz, Maximum Load, N Line, Output GND floats, EN55022 Limits

Thermal Test

Test is conducted at ambient temperature of 25°C, 85Vac/60Hz input.

QUICK START GUIDE

1. Preset Power Supply to 85VAC ≤ V_{IN} ≤ 265VAC.
2. Turn Power Supply off.
3. Connect the Line and Neutral terminals of the power supply output to L and N port. For three-wire input application, make OUTPUT GND connected to Earth.
4. Connect Different Load to Corresponding Outputs :
    a. Positive 1 (+): 18V OUT
    b. Positive 2 (+): 5V OUT
    c. Negative (–): GND
5. Turn Power Supply on after making connections.

Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
