

X4 SRAM Nonvolatile Controller Unit

Features

- Power monitoring and switching for 3-volt battery-backup applications
- Write-protect control
- 2-input decoder for control of up to 4 banks of SRAM
- 3-volt primary cell inputs
- Less than 10ns chip-enable propagation delay
- 5% or 10% supply operation

General Description

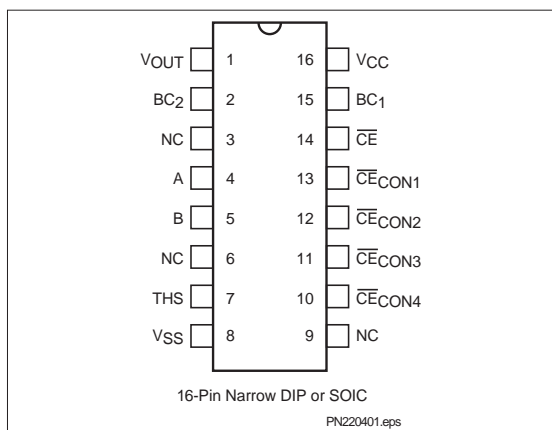

The CMOS bq2204A SRAM Nonvolatile Controller Unit provides all necessary functions for converting up to four banks of standard CMOS SRAM into nonvolatile read/write memory.

A precision comparator monitors the 5V VCC input for an out-of-tolerance condition. When out-of-tolerance is detected, the four conditioned chip-enable outputs are forced inactive to write-protect up to four banks of SRAM.

During a power failure, the external SRAMs are switched from the VCC supply to one of two 3V backup supplies. On a subsequent power-up, the SRAMs are write-protected until a power-valid condition exists.

During power-valid operation, a two-input decoder transparently selects one of up to four banks of SRAM.

Pin Connections

Pin Names

VOUT	Supply output
BC ₁ –BC ₂	3 volt primary backup cell inputs
THS	Threshold select input
$\overline{\text{CE}}$	chip-enable active low input
$\overline{\text{CE}}_{\text{CON1}}$ – $\overline{\text{CE}}_{\text{CON4}}$	Conditioned chip-enable outputs
A–B	Decoder inputs
NC	No connect
VCC	+5 volt supply input
VSS	Ground

Functional Description

Up to four banks of CMOS static RAM can be battery-backed using the VOUT and conditioned chip-enable output pins from the bq2204A. As VCC slews down during a power failure, the conditioned chip-enable outputs $\overline{\text{CE}}_{\text{CON1}}$ through $\overline{\text{CE}}_{\text{CON4}}$ are forced inactive independent of the chip-enable input $\overline{\text{CE}}$.

This activity unconditionally write-protects the external SRAM as VCC falls below an out-of-tolerance threshold VPFD. VPFD is selected by the threshold select input pin, THS. If THS is tied to VSS, the power-fail detection occurs at 4.62V typical for 5% supply operation.

If THS is tied to VCC, power-fail detection occurs at 4.37V typical for 10% supply operation. The THS pin must be tied to VSS or VCC for proper operation.

If a memory access is in process to any of the four external banks of SRAM during power-fail detection, that memory cycle continues to completion before the memory is write-protected. If the memory cycle is not terminated within time t_{WPT} , all four chip-enable outputs are unconditionally driven high, write-protecting the controlled SRAMs.

bq2204A

As the supply continues to fall past V_{PFD} , an internal switching device forces V_{OUT} to one of the two external backup energy sources. $\overline{CECON1}$ through $\overline{CECON4}$ are held high by the V_{OUT} energy source.

During power-up, V_{OUT} is switched back to the 5V supply as V_{CC} rises above the backup cell input voltage sourcing V_{OUT} . Outputs $\overline{CECON1}$ through $\overline{CECON4}$ are held inactive for time t_{CER} (120ms maximum) after the power supply has reached V_{PFD} , independent of the \overline{CE} input, to allow for processor stabilization.

During power-valid operation, the \overline{CE} input is passed through to one of the four \overline{CECON} outputs with a propagation delay of less than 10ns. The \overline{CE} input is output on one of the four \overline{CECON} output pins depending on the level of the decode inputs at A and B as shown in the Truth Table.

The A and B inputs are usually tied to high-order address pins so that a large nonvolatile memory can be designed using lower-density memory devices. Nonvolatility and decoding are achieved by hardware hookup as shown in Figure 1.

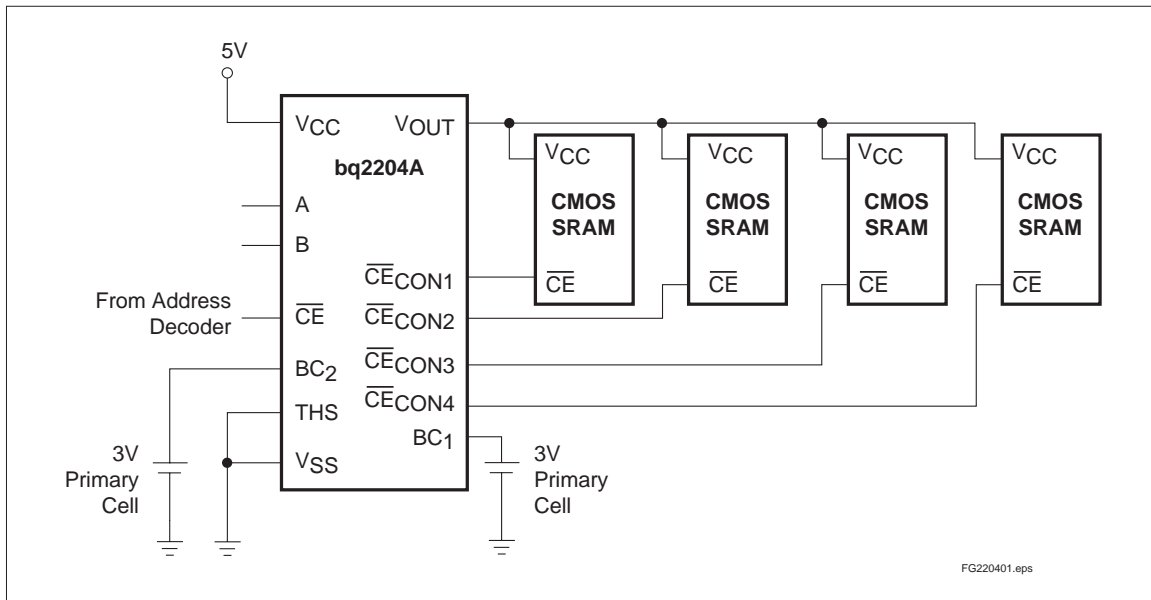

Figure 1. Hardware Hookup (5% Supply Operation)

Energy Cell Inputs—BC₁, BC₂

Two backup energy source inputs are provided on the bq2204A. The BC₁ and BC₂ inputs accept a 3V primary battery (non-rechargeable), typically some type of lithium chemistry. If no primary cell is to be used on either BC₁ or BC₂, the unused input should be tied to V_{SS}.

V_{CC} falling below V_{PF}D starts the comparison of BC₁ and BC₂. The BC input comparison continues until V_{CC} rises above V_{SO}. Power to V_{OUT} begins with BC₁ and switches to BC₂ only when V_{BC1} is less than V_{BC2} minus V_{BSO}. The controller alternates to the higher BC voltage only when the difference between the BC input voltages is greater than V_{BSO}. Alternating the backup batteries allows one-at-a-time battery replacement and efficient use of both backup batteries.

To prevent battery drain when there is no valid data to retain, V_{OUT} and $\overline{\text{CE}}_{\text{CON1-4}}$ are internally isolated from BC₁ and BC₂ by either of the following conditions:

- Initial connection of a battery to BC₁ or BC₂, or
- Presentation of an isolation signal on $\overline{\text{CE}}$.

A valid isolation signal requires $\overline{\text{CE}}$ low as V_{CC} crosses both V_{PF}D and V_{SO} during a power-down. See Figure 2. Between these two points in time, $\overline{\text{CE}}$ must be brought to the point of (0.48 to 0.52)*V_{CC} and held for at least 700ns. The isolation signal is invalid if $\overline{\text{CE}}$ exceeds 0.54*V_{CC} at any point between V_{CC} crossing V_{PF}D and V_{SO}.

The appropriate battery is connected to V_{OUT} and $\overline{\text{CE}}_{\text{CON1-4}}$ immediately on subsequent application and removal of V_{CC}.

Figure 2. Battery Isolation Signal

Truth Table

Input			Output			
$\overline{\text{CE}}$	A	B	$\overline{\text{CE}}_{\text{CON1}}$	$\overline{\text{CE}}_{\text{CON2}}$	$\overline{\text{CE}}_{\text{CON3}}$	$\overline{\text{CE}}_{\text{CON4}}$

bq2204A

Absolute Maximum Ratings

Symbol	Parameter	Value	Unit	Conditions
VCC	DC voltage applied on VCC relative to VSS	-0.3 to +7.0	V	
VT	DC voltage applied on any pin excluding VCC relative to VSS	-0.3 to +7.0	V	$V_T \leq V_{CC} + 0.3$
TOPR	Operating temperature	0 to 70	°C	Commercial
		-40 to +85	°C	Industrial "N"
TSTG	Storage temperature	-55 to +125	°C	
TBIAS	Temperature under bias	-40 to +85	°C	
TSOLDER	Soldering temperature	260	°C	For 10 seconds
IOUT	VOUT current	200	mA	

Note: Permanent device damage may occur if **Absolute Maximum Ratings** are exceeded. Functional operation should be limited to the Recommended DC Operating Conditions detailed in this data sheet. Exposure to conditions beyond the operational limits for extended periods of time may affect device reliability.

Recommended DC Operating Conditions ($T_A = T_{OPR}$)

Symbol	Parameter	Minimum	Typical	Maximum	Unit	Notes
VCC	Supply voltage	4.75	5.0	5.5	V	THS = VSS
		4.50	5.0	5.5	V	THS = VCC
VSS	Supply voltage	0	0	0	V	
VIL	Input low voltage	-0.3	-	0.8	V	
VIH	Input high voltage	2.2	-	$V_{CC} + 0.3$	V	
VBC1, VBC2	Backup cell voltage	2.0	-	4.0	V	$V_{CC} < V_{BC}$
THS	Threshold select	-0.3	-	$V_{CC} + 0.3$	V	

Note: Typical values indicate operation at $T_A = 25^\circ\text{C}$, $V_{CC} = 5\text{V}$ or V_{BC} .

DC Electrical Characteristics ($T_A = T_{OPR}$, $V_{CC} = 5V \pm 10\%$)

Symbol	Parameter	Minimum	Typical	Maximum	Unit	Conditions/Notes
ILI	Input leakage current	-	-	± 1	μA	$V_{IN} = V_{SS}$ to V_{CC}
VOH	Output high voltage	2.4	-	-	V	$I_{OH} = -2.0mA$
VOHB	VOH, BC supply	$V_{BC} - 0.3$	-	-	V	$V_{BC} > V_{CC}$, $I_{OH} = -10\mu A$
VOL	Output low voltage	-	-	0.4	V	$I_{OL} = 4.0mA$
ICC	Operating supply current	-	3	6	mA	No load on outputs.
VPFD	Power-fail detect voltage	4.55	4.62	4.75	V	$THS = V_{SS}$
		4.30	4.37	4.50	V	$THS = V_{CC}$
VSO	Supply switch-over voltage	-	V_{BC}	-	V	
ICCDR	Data-retention mode current	-	-	100	nA	V_{OUT} data-retention current to additional memory not included.
VBC	Active backup cell voltage	-	V_{BC1}	-	V	$V_{BC1} > V_{BC2} + V_{BSO}$
		-	V_{BC2}	-	V	$V_{BC2} > V_{BC1} + V_{BSO}$
VBSO	Battery switch-over voltage	0.25	0.4	0.6	V	
IOUT1	V_{OUT} current	-	-	160	mA	$V_{OUT} > V_{CC} - 0.3V$
IOUT2	V_{OUT} current	-	100	-	μA	$V_{OUT} > V_{BC} - 0.2V$

Note: Typical values indicate operation at $T_A = 25^\circ C$, $V_{CC} = 5V$ or V_{BC} .

Capacitance ($T_A = 25^\circ C$, $F = 1MHz$, $V_{CC} = 5.0V$)

Symbol	Parameter	Minimum	Typical	Maximum	Unit	Conditions
CIN	Input capacitance	-	-	8	pF	Input voltage = 0V
COUT	Output capacitance	-	-	10	pF	Output voltage = 0V

Note: This parameter is sampled and not 100% tested.

bq2204A

AC Test Conditions

Parameter	Test Conditions
Input pulse levels	0V to 3.0V
Input rise and fall times	5ns
Input and output timing reference levels	1.5V (unless otherwise specified)

Figure 3. Output Load

Power-Fail Control ($T_A = T_{OPR}$)

Symbol	Parameter	Minimum	Typical	Maximum	Unit	Notes
tPF	V _{CC} slew, 4.75V to 4.25V	300	-	-	μs	
tFS	V _{CC} slew, 4.25V to V _{SO}	10	-	-	μs	
tPU	V _{CC} slew, 4.25V to 4.75V	0	-	-	μs	
tCED	chip-enable propagation delay	-	7	10	ns	
tAS	A,B set up to \overline{CE}	0	-	-	ns	
tCER	chip-enable recovery	40	80	120	ms	Time during which SRAM is write-protected after V _{CC} passes V _{PFD} on power-up.
tWPT	Write-protect time	40	100	150	μs	Delay after V _{CC} slews down past V _{PFD} before SRAM is write-protected.

Note: Typical values indicate operation at $T_A = 25^\circ\text{C}$, $V_{CC} = 5\text{V}$.

Caution: Negative undershoots below the absolute maximum rating of -0.3V in battery-backup mode may affect data integrity.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46C and to discontinue any product or service per JESD48B. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components which meet ISO/TS16949 requirements, mainly for automotive use. Components which have not been so designated are neither designed nor intended for automotive use; and TI will not be responsible for any failure of such components to meet such requirements.

Связь**

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
