Vishay Siliconix

Powered-off Protection, High Speed, 1.65 V to 5.5 V, SPDT Analog Switch (2:1 Multiplexer / Demultiplexer Bus Switch)

DESCRIPTION

The DG3157E is a high speed single-pole double-throw analog switch designed for +1.65 V to +5.5 V single power rail operation.

Fabricated with high density CMOS technology, the DG3157E achieves low on-resistance, fast switching speed, and high bandwidth while maintains low power consumption.

The DG3157E can handle both analog and digital signals and permits signals with amplitudes of up to V+ to be transmitted in either direction.

When the select pin is low, B_0 is connected to the output A pin. When the select pin is high, B_1 is connected to the output A pin. The path that is open will have a high impedance state with respect to the output. Break before make switching performance is guaranteed.

A powered-off protection circuit is built into the switch to prevent an abnormal current flow from COM pin to V+ during the power-down condition. Each output pin can withstand greater than 7 kV (human body model).

Operation temperature is specified from -40 $^{\circ}$ C to +85 $^{\circ}$ C. The DG3157E is available in the compact SC-70-6L package.

FEATURES

 Direct cross to industry standard SN74LVC1G3157, NC7SB3157, NLASB3157, Pl5A3157, and STG3157

ROHS COMPLIANT HALOGEN

FREE

- Low switch on-resistance (6 Ω)
- +1.65 V to +5.5 V single supply operation
- Powered-off protection
- Control logic inputs can go over V+ up to 5.5 V
- · Low parasitic capacitance, 7 pF at switch off
- · Break before make switching
- Latch-up performance exceeds 200 mA per JESD 78
- · High ESD rating
 - 7000 V human body model (JS-001)
 - 1000 V charge device model (JS-002)
- Material categorization: for definitions of compliance please see www.vishay.com/doc?99912

APPLICATIONS

- · Battery powered devices
- · Consumer and computing
- Instrumentation
- Medical equipment
- · Control and automation

ABSOLUTE MAXIMUM RATINGS						
PARAMETER		LIMIT	UNIT			
V+, A, B ₀ , B ₁ , S reference to GND		-0.3 to 6	V			
Continuous current (any terminal)		± 50	mA			
Peak current (pulsed at 1 ms, 10 % duty cycle)		± 200	TIIA TIIA			
Storage temperature	D suffix	-65 to +150	°C			
Power dissipation (packages) ^a	6-pin SC-70 ^b	250	mW			
ESD / HBM	JS-001	7000	V			
ESD / CDM	JS-002	1000	¬			
Latch up	Per JESD78 with 1.5 x V _{abs} max. clamp	200	mA			

Notes

- a. All leads welded or soldered to PC board b. Derate 3.1 mW/°C above 70 °C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Notes

- a. Room = 25 °C, full = as determined by the operating suffix
- b. The algebraic convention whereby the most negative value is a minimum and the most positive a maximum, is used in this datasheet
- c. Typical values are for design aid only, not guaranteed nor subject to production testing
- d. Guarantee by design, nor subjected to production test
- e. V_S = input voltage to perform proper function
- f. Guaranteed by design and not production tested. The bus switch propagation delay is a function of the RC time constant contributed by the on-resistance and the specified load capacitance with an ideal voltage source (zero output impedance) driving the switch

AC LOADING AND WAVEFORMS

Fig. 2 - AC Test Circuit

Fig. 3 - AC Waveforms

Fig. 4 - AC Waveforms

Notes

- C_L includes probe and jig capacitance
- Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control
- Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- All input pulses are supplied by generators having the following characteristics: PRR ≤ 10 MHz, Z_O = 50 Ω
- · The outputs are measured one at a time with one transition per measurement
- $\bullet \quad t_{PLZ} \mbox{ and } t_{PHZ} \mbox{ are the same as } t_{dis}$
- t_{PZL} and t_{PZH} are the same as t_{dis}
- t_{PLH} and t_{PHL} are the same as t_{dis}
- V_{LD} = 2 V+

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию.

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России, а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научноисследовательскими институтами России.

С нами вы становитесь еще успешнее!
