LASER DIODE DRIVER WITH INPUT D FLIP-FLOP

SY100EL1001

FEATURES

- **Up to 1.25Gb/s operation**
- **75mA peak drive current**
- **Separate modulation control**
- **Separate master reset for laser safety**
- **Differential inputs for data and clock**
- **75KΩ input pulldown resistor**
- **Single power supply**
- **Available in 16-pin SOIC package**

DESCRIPTION

The SY100EL1001 is a high speed current source for driving a semiconductor laser diode in optical transmission applications. The output current modulation is DC – voltage controlled. The integrated circuit contains the following functional blocks:

- Input Line Receiver
- D Flip-Flop
- Bias Control Circuitry
- Output Current Switch

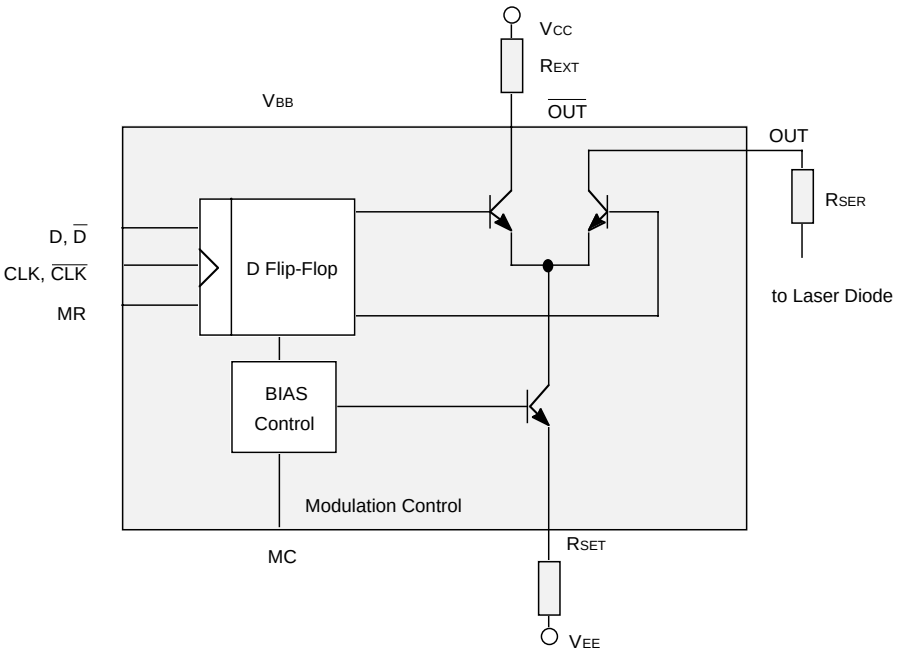

A logic HIGH level at the data input results in the modulation current flowing through the OUT pin on the next rising edge of the clock. A logic HIGH level at the master reset input will disable the modulation current.

The device incorporates complementary open collector outputs with a capability of driving peak current of 75 mA.

The laser driver current is adjustable by selection of RSET. The resistor REXT must be placed between /OUT and VCC to dissipate the worst case power. RSER is recommended to fix laser diode matching issues.

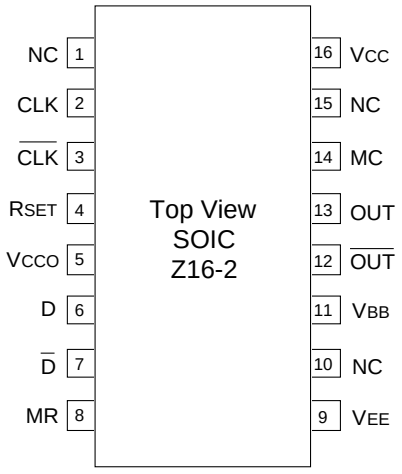

The SY100EL1001 utilizes the high performance bipolar ASSET™ technology.

Notes:

1. Contact factory for die availability. Dice are guaranteed at T_A = 25°C, DC Electricals only.
2. Tape and Reel.
3. Pb-Free package is recommended for new designs.

PIN NAMES

Pin	Function
V_{CC}, V_{CCO}	Most positive power supply pins separation helps to isolate sensitive circuitry from noise generating function. +5V for PECL operation or ground for ECL operation.
V_{EE}	Most negative power supply input. Ground for PECL operation or -5V for ECL operation.
V_{BB}	This pin provides a reference voltage for use in single ended applications or when the input signal is AC coupled into the device.
D,/D	These differential ECL/PECL 100K compatible inputs receive NRZ data.
CLK, /CLK	These differential clock inputs
MR	This ECL/PECL 100K compatible input resets the Laser Driver Logic - modulation current transitions to zero when asserted high.
OUT, /OUT	Open collector outputs from the modulation buffer drive these differential current outputs.
MC	An external voltage sets the main value of modulation current I_O.
R_{SET}	An external resistor sets the source current for modulation Imod.
NC	These pins are not connected.

TRUTH TABLE[1]

D	/D	CLK	/CLK	MR	OUT	/OUT
L	H	Z	ZZ	L	H	L
H	L	Z	ZZ	L	L	H
X	X	X	X	H	H	L

Note:

1. L = LOW, H = HIGH, Z = LOW-to-HIGH transition, ZZ = HIGH-to-LOW transition, X = don't care.

ABSOLUTE MAXIMUM RATINGS(1)

Symbol	Rating	Value	Unit
V_{CC}	Power Supply Voltage (V_{CC} = 0V)	0 to –7.0	V
V_{IN}	Input Voltage (V_{CC} = 0V)	0 to –6.0	V
I_{OUT}	Output Current	75	mA
T_{LEAD}	Lead Temperatre (soldering, 20sec.)	+260	°C
T_A	Operating Temperature Range	–40 to +85	°C
P_D	Power Dissipation	500	mW

Note:

1. Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum ratlng conditions for extended periods may affect device reliability.

OPERATIONING CONDITIONS(1)

Symbol	Rating	Value	Unit
V_{EE}	Power Supply Voltage	–4.75 to –5.25	V
R_{SET}	Resistor to Adjust Current	10 to 100	Ω
R_{EXT}	Resistor to Dissipate Power	10 to 50	Ω
R_{SER}	Laser Diode Serial Resistor	0 to 50	Ω

Note:

1. The voltage drop across REXT and RSER should not be greater than 2V.

PERFORMANCE CURVES

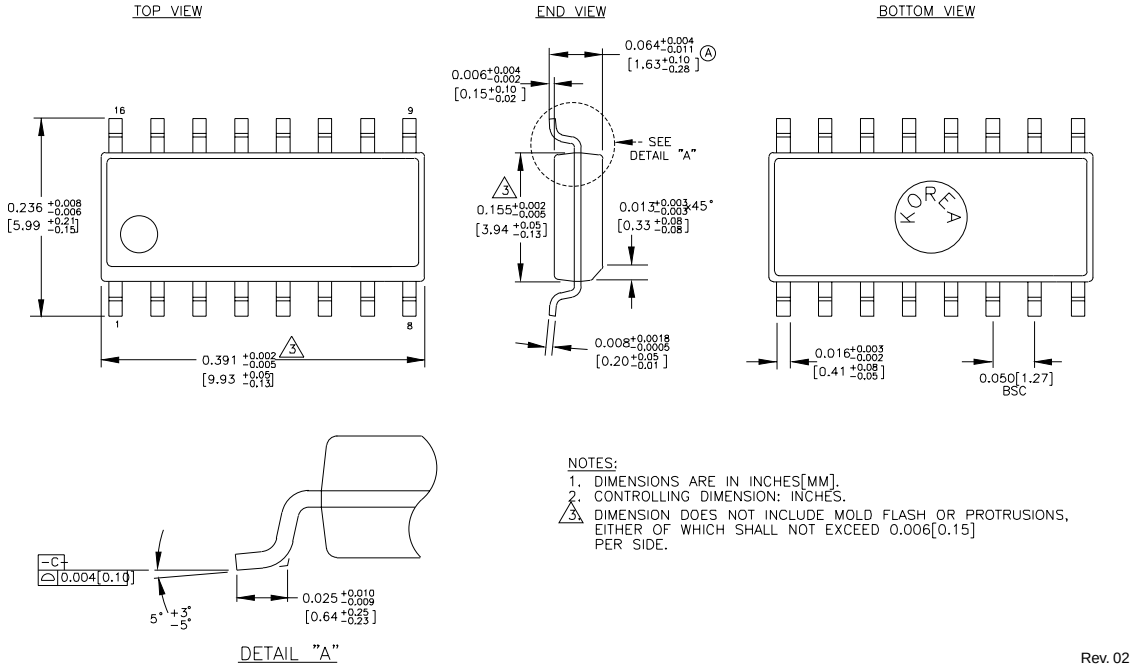

APPLICATION EXAMPLE

NOTES:

1. Split 100K ECL terminations are 82Ω and 130Ω to V_{CC} and V_{EE} respectively.
2. Recommended power supply bypass capacitors are 0.1µF with optional 10µF Tantalum in parallel.
3. High frequency design techniques are required for board layout. A double sided or multilayer board is recommended in conjunction with a low impedance ground plane and properly terminated transmission lines for all signal paths.
4. V_{BB} voltage pin may be used as reference for single ended input applications.

Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
