

## CD40174BM/CD40174BC Hex D Flip-Flop CD40175BM/CD40175BC Quad D Flip-Flop

### General Description

The CD40174B consists of six positive-edge triggered D-type flip-flops; the true outputs from each flip-flop are externally available. The CD40175B consists of four positive-edge triggered D-type flip-flops; both the true and complement outputs from each flip-flop are externally available.

All flip-flops are controlled by a common clock and a common clear. Information at the D inputs meeting the set-up time requirements is transferred to the Q outputs on the positive-going edge of the clock pulse. The clearing operation, enabled by a negative pulse at Clear input, clears all Q outputs to logical "0" and Qs (CD40175B only) to logical "1".

All inputs are protected from static discharge by diode clamps to  $V_{DD}$  and  $V_{SS}$ .

### Features

- Wide supply voltage range 3V to 15V
- High noise immunity 0.45  $V_{DD}$  (typ.)
- Low power TTL fan out of 2 driving 74L compatibility or 1 driving 74 LS
- Equivalent to MC14174B, MC14175B
- Equivalent to MM74C174, MM74C175
