

Ultra-Low-Power Voltage Detectors and μ P Supervisory Circuits

MAX6461-MAX6466

General Description

The MAX6461-MAX6466 family of ultra-low-power voltage detectors and μ P reset supervisory circuits monitors battery, power-supply, and system voltages. Each circuit includes a precision bandgap reference, a comparator, internally trimmed resistor networks that set specified trip thresholds, and an internal 5% threshold hysteresis circuit (see the *Functional Diagram*). Output is asserted when V_{CC} falls below the internal V_{TH-} and remains asserted until V_{CC} rises above V_{TH+} ($V_{TH+} = V_{TH-} \times 1.05$). These devices provide excellent circuit reliability and low cost by eliminating external components and adjustments when monitoring nominal system voltages from +1.6V to +5.5V. The MAX6461/MAX6462/MAX6463 are voltage detectors with a propagation delay of 17 μ s.

The MAX6464/MAX6465/MAX6466 are μ P supervisory circuits with a minimum reset timeout period of 150ms. All devices are available with thresholds from +1.6V to +5.5V in 100mV increments.

The family is available with three output stage options: push-pull with active-low output, push-pull with active-high output, and open drain with active-low output. These devices are available in SC70 and SOT23 packages specified over the -40°C to +125°C temperature range.

Applications

- Precision Battery Monitoring
- Load Switching/Power Sequencing
- Power-Supply Monitoring in Digital/Analog Systems
- Noise-Immune μ P Reset Circuits
- Portable/Battery-Powered Equipment
- Cellular Phones/Cordless Phones
- PDA's
- Portable Medical Devices

Features

- ◆ Ultra-Low 1.0 μ A Supply Current
- ◆ Preset Thresholds from +1.6V to +5.5V in 100mV Increments
- ◆ Internal 5% Threshold Hysteresis
- ◆ $\pm 2.5\%$ Threshold Accuracy Over Temperature
- ◆ Internal Timeout Period Option (150ms min)
- ◆ Immune to Short Voltage Transients
- ◆ No External Components
- ◆ Available in Three Output Options: Push-Pull (Active Low/Active High) and Open Drain (Active Low)
- ◆ Fully Specified from -40°C to +125°C
- ◆ Small SC70 and SOT23 Packages

Ordering Information

PART	TEMP RANGE	PIN-PACKAGE
MAX6461XR__-T	-40°C to +125°C	3 SC70-3
MAX6461UR__-T	-40°C to +125°C	3 SOT23-3
MAX6461UK__-T	-40°C to +125°C	5 SOT23-5
MAX6462XR__-T	-40°C to +125°C	3 SC70-3
MAX6462UR__-T	-40°C to +125°C	3 SOT23-3
MAX6462UK__-T	-40°C to +125°C	5 SOT23-5

The MAX6461-MAX6466 are available in factory-set thresholds from 1.6V to 5.5V in approximately 100mV increments. Choose the desired voltage threshold suffix from Table 1 and insert it in the blank spaces in the part number. There are 30 standard versions with a required order increment of 2500 pieces. Sample stock generally is held on the standard versions only (Table 2). Nonstandard versions require a 10k-piece order increment. Contact factory for availability. All devices available in tape-and-reel only.

Devices are available in both leaded and lead-free packaging. Specify lead-free by replacing "-T" with "+T" when ordering.

Ordering Information continued at end of data sheet.
Selector Guide appears at end of data sheet.

Pin Configurations

Ultra-Low-Power Voltage Detectors and μ P Supervisory Circuits

ABSOLUTE MAXIMUM RATINGS

(All voltages referenced to GND unless otherwise noted.)

V_{CC}, Open-Drain OUT-0.3V to +7V

Push-Pull OUT/ $\overline{\text{OUT}}$ -0.3V to (V_{CC} + 0.3V)

Input/Output Current (all pins)20mA

Output Short Circuit (V_{CC} or GND)

Continuous Power Dissipation (T_A = +70°C)

3-Pin SC70 (derate 2.9mW/°C above +70°C)228.6mW

3-Pin SOT23 (derate 4.0mW/°C above +70°C)320mW

5-Pin SOT23 (derate 7.1mW/°C above +70°C)571mW

Operating Temperature Range-40°C to +125°C

Junction Temperature+150°C

Storage Temperature Range-65°C to +150°C

Lead Temperature (soldering, 10s)+300°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

(V_{CC} = +1.2V to +6V, T_A = -40°C to +125°C. Typical values are at T_A = +25°C, unless otherwise noted.) (Note1)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS

Functional Diagram

Detailed Description

The MAX6461/MAX6462/MAX6463 voltage detectors and the MAX6464/MAX6465/MAX6466 μP reset supervisory circuits monitor battery, power-supply, and system voltages from +1.6V to +5.5V. These devices consume only 1 μA of supply current with a 3.6V supply voltage. Whenever V_{CC} falls below the internal $V_{\text{TH-}}$ threshold, the output is asserted and remains asserted until V_{CC} rises above $V_{\text{TH+}}$ ($V_{\text{TH+}} = V_{\text{TH-}} \times 1.05$). All devices have $\pm 2.5\%$ threshold accuracy over temperature and offer protection to short voltage transients. These devices are ideal for low-cost and space-critical applications because they do not require external components for proper operation.

Ultra-Low-Power Voltage Detectors and μP Supervisory Circuits

Figure 1. Interfacing to Different Logic Voltage Components

Applications Information

Interfacing to Different Logic Voltage Components

The MAX6463 and MAX6466's active-low, open-drain output versions can be used to interface with a different logic voltage than V_{CC} , as shown in Figure 1. This output structure sinks current when $\overline{\text{OUT}}$ is asserted. Connect a pullup resistor from $\overline{\text{OUT}}$ to any supply from 0 to 6V. Select a resistor value large enough to allow a valid logic low (see the *Electrical Characteristics*) and small enough to register a logic high while supplying all input current and leakage paths connected to the $\overline{\text{OUT}}$ pin.

Hysteresis

The MAX6461–MAX6466 feature internal hysteresis that creates two trip points: one for rising supply voltage and one for falling supply voltage. The hysteresis prevents the output from oscillating (chattering) when V_{CC} is near the voltage threshold.

Transients Immunity

These devices are relatively immune to short-duration and falling V_{CC} transients (glitches). The *Typical Operating Characteristics* show the Maximum Transient Duration vs. Threshold Overdrive graph, for which $\overline{\text{OUT}}$ is not asserted. The graph shows the maximum pulse width that a falling V_{CC} transient typically might have before the devices are asserted. As the amplitude of the transient increases, the maximum allowable pulse width decreases.

Ensuring Valid Output Down to 0V

When V_{CC} falls below 1V, the MAX6461/MAX6464 output sinking capability is reduced. Therefore, high-impedance CMOS logic inputs connected to $\overline{\text{OUT}}$ can drift to undetermined voltages. This presents no problem in most applications, because most circuitry is inoperative when V_{CC} is below 1V. In applications where $\overline{\text{OUT}}$ must be valid down to ground, add a pull-down resistor to ground so any stray leakage currents flow to ground, holding $\overline{\text{OUT}}$ low. Select a resistor large enough not to load $\overline{\text{OUT}}$ and small enough to pull $\overline{\text{OUT}}$ to ground. For most applications, 100k Ω does not load $\overline{\text{OUT}}$ and pulls $\overline{\text{OUT}}$ to ground.

Ultra-Low-Power Voltage Detectors and μ P Supervisory Circuits

Ordering Information (continued)

PART	TEMP RANGE	PIN-PACKAGE
MAX6463 XR_ _-T	-40°C to +125°C	3 SC70-3
MAX6463UR_ _-T	-40°C to +125°C	3 SOT23-3
MAX6463UK_ _-T	-40°C to +125°C	5 SOT23-5
MAX6464 XR_ _-T	-40°C to +125°C	3 SC70-3
MAX6464UR_ _-T	-40°C to +125°C	3 SOT23-3
MAX6464UK_ _-T	-40°C to +125°C	5 SOT23-5
MAX6465 XR_ _-T	-40°C to +125°C	3 SC70-3
MAX6465UR_ _-T	-40°C to +125°C	3 SOT23-3
MAX6465UK_ _-T	-40°C to +125°C	5 SOT23-5
MAX6466 XR_ _-T	-40°C to +125°C	3 SC70-3
MAX6466UR_ _-T	-40°C to +125°C	3 SOT23-3
MAX6466UK_ _-T	-40°C to +125°C	5 SOT23-5

The MAX6461-MAX6466 are available in factory-set thresholds from 1.6V to 5.5V in approximately 100mV increments. Choose the desired voltage threshold suffix from Table 1 and insert it in the blank spaces in the part number. There are 30 standard versions with a required order increment of 2500 pieces. Sample stock generally is held on the standard versions only (Table 2). Nonstandard versions require a 10k-piece order increment. Contact factory for availability. All devices available in tape-and-reel only.

Devices are available in both leaded and lead-free packaging. Specify lead-free by replacing "-T" with "+T" when ordering.

Chip Information

TRANSISTOR COUNT: 581
PROCESS: BICMOS

Package Information

For the latest package outline information, go to www.maxim-ic.com/packages.)

Maxim cannot assume responsibility for use of any circuitry other than circuitry entirely embodied in a Maxim product. No circuit patent licenses are implied. Maxim reserves the right to change the circuitry and specifications without notice at any time.

Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
