

General Description

The MAX2140 evaluation kit (EV kit) simplifies evaluation of the MAX2140 complete SDARS receiver IC. It enables testing of the device's RF performance and requires no additional support circuitry. The EV kit's signal inputs and outputs use SMA connectors to facilitate the connection of RF test equipment.

Features

- Easy Evaluation of the MAX2140
- +3.1V to +3.6V Single-Supply Operation
- Jumpers for Digital Power Control and Shutdown
- All Critical Peripheral Components Included
- PC Control Software Included

Quick Start

The MAX2140 EV kit is fully assembled and factory tested. Follow the instructions in the *Connections and Setup* section for proper device evaluation.

Test Equipment Required

This section lists the recommended test equipment to verify operation of the MAX2140. It is intended as a guide only, and some substitutions are possible:

- MAX2140 EV kit
- RF signal generator capable of delivering at least +5dBm of output power at the operating frequency (HPE4433B, or equivalent)
- RF power sensor capable of handling at least +20dBm of output power at the operating frequency (HP 8482A, or equivalent)
- RF power meter capable of measuring up to +20dBm of output power at the operating frequency (HP 437B, or equivalent)
- RF spectrum analyzer that covers the MAX2140 operating frequency range, as well as a few harmonics (FSEB20, for example)
- Power supply capable of up to 1A at +2.7V to +6.0V
- Ammeter for measuring the supply current (optional)
- 50Ω SMA cables
- Network analyzer (HP 8753D, for example) to measure small-signal return loss and gain (optional)
- PC laptop or tablet with Microsoft Windows XP®, Windows® 7, 8 OS and a USB port
- USB-A male to USB-B male cable
- US keyboard

Connections and Setup

This section provides a step-by-step guide to operating the EV kit and testing the device's function. **Do not turn on the DC power or RF signal generators until all connections are complete:**

- 1) Connect two DC supplies set to ±5V (through an ammeter if desired) to the +5V, -5V, and GND terminals on the EV kit. Do not turn on the supply.
- 2) Connect a DC supply set to 0V to the PWM terminals on the EV kit. Do not turn on the supply.
- 3) Connect one RF signal generator to the JRFIN SMA connector; do not turn on the generator's output. Set the power level to -91dBm.
- 4) Connect the I/Q output on the EV kit to a spectrum analyzer through an SMA cable.
- 5) Connect the PC to the INTF3000 interface board using the USB-A male to USB-B male cable. On INTF3000, remove jumper JU1, and connect a DC supply set to +3V to the VPULL connector. Connect the 25-pin connector of the INTF3000 (J4) directly to the 25-pin connector on the EV kit (J1).
- 6) Run the control software on an IBM-compatible PC.
- 7) Turn on the DC supply. The supply current should read approximately 150mA.
- 8) Activate the RF generator's output.
- 9) Check the I/Q outputs.

Layout Issues

A good PCB is an essential part of an RF circuit design. The EV kit PCB can serve as a guide for laying out a board using the MAX2140. Keep traces carrying RF signals as short as possible to minimize radiation and insertion loss. Use impedance control on all RF signal traces. The VCC node on the PCB should have decoupling capacitors to the closest ground. Refer to the *Layout* section in the MAX2140 IC data sheet for more information.

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
