# WIZnet's Online Technical Support

If you have something to ask about WIZnet Products, Write down your question on Q&A Board in WIZnet website ([www.wiznet.co.kr](http://www.wiznet.co.kr)). WIZnet Engineer will give an answer as soon as possible.

The screenshot shows the WIZnet website interface. At the top right, there are links for Home, Sitemap, Contact us, and 한국어. Below the logo is a navigation menu with items: Products, Technology, Technical Q & A, Library, Where to buy, Value Chain, and About us.

The main content area features a large banner for the W5100 chip, stating it is a '3 in 1' solution for embedded Internet, combining TCP/IP Core, MAC, and PHY. It also mentions 'TCP/IP Easy Implementation by Compact & Simple!!'. To the right, there's a 'New Products' section for the WIZ Series with W5100, specifically the Serial-to-Ethernet WIZ100SR, accompanied by an image of the module.

Below the banner are three columns of content:

- Application Reference:** A list of three items with dates: [038] Solar Cell Inverter [2007.07.23], [037] Mobile Base Station [2007.07.09], and [036] Individual Screens in TGV [2007.06.05].

## 2.4. Network status & LEDs

You can observe the network status using MAC-JACK LEDs. LED interface can be extended to the LED of the main board.

Symbol	Type	Pin No.	Description
L_COL	O	JP2 : 6	<b>Collision LED</b> : Active low when collisions occur.
L_100ACT	O	JP2 : 8	<b>Link 100/ACT LED</b> : Active low when linked by 100 Base TX, and blinking when transmitting or receiving data.
L_10ACT	O	JP2 : 10	<b>Link 10/ACT LED</b> : Active low when linked by 10 Base T, and blinking when transmitting or receiving data.
L_DUPX	O	JP2 : 11	<b>Full Duplex LED</b> : Active low when in full duplex operation. Active high when in half duplex operation.
L_LINK	O	JP2 : 12	<b>Link LED</b> : Active low when linked

## 2.5. Miscellaneous Signals

Symbol	Type	Pin No.	Description
/RESET	I	JP2 : 2	<b>Reset</b> : Active low Reset W3150A, RTL8201BL chip. For complete reset function this pin must be asserted low for at least 10ms.
SPI_EN	I	JP2 : 9	<b>SPI Enable</b> This pin selects Enable/disable W3150A <sup>+</sup> SPI Mode This pin is internally pulled low for previous W3150A users. Even if there is no signal connection to this pin, it asserts low internally. So change to new version W3150A <sup>+</sup> including SPI interface, there is no effort to change previous board design. Low = Disable W3150A <sup>+</sup> SPI Mode High = Enable W3150A <sup>+</sup> SPI Mode
NC	-	JP1 : 6, 25, 26, 27, 28 JP2 : 3, 5, 9, 25, 26, 27, 28	Not Connect
