

## 5 V, 1 A H-Bridge Motor Driver

### DESCRIPTION

The SiP2100 is an integrated, buffered H-bridge with TTL and CMOS compatible inputs with the capability of delivering up to 1 A continuous current at 5 V  $V_{DD}$  supply.

The SiP2100 has two independent logic inputs that can set four different motor operation modes: normal rotation, reverse rotation, stop (idling) and braking. The internal shoot-through protection logic also prevents upper and lower outputs from being turned on simultaneously.

The SiP2100 offers high efficiency with an extremely low operating current. The device also benefits from over temperature protection with a shut down hysteresis of 20 °C.

The SiP2100 is available in SOIC8 package.

### FEATURES
