

**256Kx16
4Mb DRAM WITH EDO PAGE MODE**

JANUARY 2013

FEATURES

- TTL compatible inputs and outputs; tri-state I/O
- Refresh Interval: 512 cycles/8 ms
- Refresh Mode : $\overline{\text{RAS}}$ -Only, $\overline{\text{CAS}}$ -before- $\overline{\text{RAS}}$ (CBR), and Hidden
- JEDEC standard pinout
- Single power supply:
 $5V \pm 10\%$ (IS41C16256C)
 $3.3V \pm 10\%$ (IS41LV16256C)
- Byte Write and Byte Read operation via two $\overline{\text{CAS}}$
- Industrial Temperature Range -40°C to +85°C

DESCRIPTION

The IS41C16256C and IS41LV16256C are 262,144 x 16-bit high-performance CMOS Dynamic Random Access Memories. Both products offer accelerated cycle access EDO Page Mode. EDO Page Mode allows 512 random accesses within a single row with access cycle time as short as 14ns per 16-bit word. It is asynchronous, as it does not require a clock signal input to synchronize commands and I/O.

These features make the IS41C/LV16256C ideally suited for high band-width graphics, digital signal processing, high-performance computing systems, and peripheral applications that run without a clock to synchronize with the DRAM.

The IS41C/LV16256C is packaged in 40-pin TSOP (Type II).

KEY TIMING PARAMETERS

Parameter	-35	Unit
Max. $\overline{\text{RAS}}$ Access Time (t _{RAC})	35	ns
Max. $\overline{\text{CAS}}$ Access Time (t _{CAC})	13	ns
Max. Column Address Access Time (t _{AA})	18	ns
Min. EDO Page Mode Cycle Time (t _{PC})	14	ns
Min. Read/Write Cycle Time (t _{RC})	60	ns

Notes:

1. These WRITE cycles may also be BYTE WRITE cycles (either LCAS or UCAS active).
2. These READ cycles may also be BYTE READ cycles (either LCAS or UCAS active).
3. Early write only.
4. At least one of the two CAS signals must be active (LCAS or UCAS).
5. Commands valid only after proper initialization.

Functional Description

The IS41C/LV16256C is a CMOS DRAM optimized for high-speed bandwidth, low power applications. During READ or WRITE cycles, each bit is uniquely addressed through the 18 address bits. These are entered nine bits (A0-A8) at a time. The row address is latched by the Row Address Strobe (RAS). The column address is latched by the Column Address Strobe (CAS). RAS is used to latch the first nine bits and CAS is used the latter nine bits.

The IS41C/LV16256C has two CAS controls, LCAS and UCAS. The LCAS and UCAS inputs internally generates a CAS signal functioning in an identical manner to the single CAS input on the other 256K x 16 DRAMs. The key difference is that each CAS controls its corresponding I/O tristate logic (in conjunction with OE and WE and RAS). LCAS controls I/O0 through I/O7 and UCAS controls I/O8 through I/O15.

The IS41C/LV16256C CAS function is determined by the first CAS (LCAS or UCAS) transitioning LOW and the last transitioning back HIGH. The two CAS controls give the IS41C/LV16256C both BYTE READ and BYTE WRITE cycle capabilities.

Memory Cycle

A memory cycle is initiated by bring RAS LOW and it is terminated by returning both RAS and CAS HIGH. To ensures proper device operation and data integrity any memory cycle, once initiated, must not be ended or aborted before the minimum tRAS time has expired. A new cycle must not be initiated until the minimum precharge time tRP, tCP has elapsed.

Read Cycle

A read cycle is initiated by the falling edge of CAS or OE, whichever occurs last, while holding WE HIGH. The column address must be held for a minimum time specified by tAR. Data Out becomes valid only when tRAC, tAA, tcAC and toEA are all satisfied. As a result, the access time is dependent on the timing relationships between these parameters.

Write Cycle

A write cycle is initiated by the falling edge of CAS and WE, whichever occurs last. The input data must be valid at or before the falling edge of CAS or WE, whichever occurs last.

Refresh Cycle

To retain data, 512 refresh cycles are required in each 8 ms period. There are two ways to refresh the memory.

1. By clocking each of the 512 row addresses (A0 through A8) with RAS at least once every 8 ms. Any read, write, read-modify-write or RAS-only cycle refreshes the addressed row.
2. Using a CAS-before-RAS refresh cycle. CAS-before-RAS refresh is activated by the falling edge of RAS, while holding CAS LOW. In CAS-before-RAS refresh cycle, an internal 9-bit counter provides the row addresses and the external address inputs are ignored. CAS-before-RAS is a refresh-only mode and no data access or device selection is allowed. Thus, the output remains in the High-Z state during the cycle.

Extended Data Out Page Mode

EDO page mode operation permits all 512 columns within a selected row to be randomly accessed at a high data rate.

In EDO page mode read cycle, the data-out is held to the next CAS cycle's falling edge, instead of the rising edge. For this reason, the valid data output time in EDO page mode is extended compared with the fast page mode. In the fast page mode, the valid data output time becomes shorter as the CAS cycle time becomes shorter. Therefore, in EDO page mode, the timing margin in read cycle is larger than that of the fast page mode even if the CAS cycle time becomes shorter.

In EDO page mode, due to the extended data function, the CAS cycle time can be shorter than in the fast page mode if the timing margin is the same.

The EDO page mode allows both read and write operations during one RAS cycle, but the performance is equivalent to that of the fast page mode in that case.

Power-On

During Power-on, RAS, CAS, UCAS, LCAS, and WE must all track with VDD (HIGH) to avoid current surges, and allow initialization to continue. An initial pause of 200 μs is required followed by a minimum of eight initialization cycles (any combination of cycles containing a RAS signal).

ABSOLUTE MAXIMUM RATINGS⁽¹⁾

Symbol	Parameters	Rating	Unit
V _T	Voltage on Any Pin Relative to GND	5V	-1.0 to +7.0 V
		3.3V	-0.5 to +4.6 V
V _{DD}	Supply Voltage	5V	-1.0 to +7.0 V
		3.3V	-0.5 to +4.6 V
I _{OUT}	Output Current	50 mA	
P _D	Power Dissipation	1 W	
T _A	Operation Temperature	-40 to +85 °C	
T _{STG}	Storage Temperature	-55 to +125 °C	

Note:

1. Stress greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

RECOMMENDED OPERATING CONDITIONS (Voltages are referenced to GND.)

Symbol	Parameter	Test Conditions	Min.	Typ.	Max.	Unit
V _{DD}	Supply Voltage		5V	4.5	5.0	5.5 V
			3.3V	3.0	3.3	3.6 V
V _{IH}	Input High Voltage		5V	2.4	—	V _{DD} + 1.0 V
			3.3V	2.0	—	V _{DD} + 0.3 V
V _{IL}	Input Low Voltage	Any input 0V ≤ V _{IN} ≤ V _{DD} Other inputs not under test = 0V	5V	-1.0	—	0.8 V
			3.3V	-0.3	—	0.8 V
I _{IL}	Input Leakage Current	Any input 0V ≤ V _{IN} ≤ V _{DD} Other inputs not under test = 0V	-5	—	5	μA
I _{IO}	Output Leakage Current					
V _{OH}	Output High Voltage Level	I _{OH} = -5.0 mA	5V	2.4	—	V
		I _{OH} = -2.0 mA	3.3V	2.4	—	
V _{OL}	Output Low Voltage Level	I _{OL} = +4.2 mA	5V	—	0.4	V
		I _{OL} = +2.0 mA	3.3V	—	0.4	

CAPACITANCE^(1,2)

Symbol	Parameter	Max.	Unit
C _{IN1}	Input Capacitance: A0-A8	5	pF
C _{IN2}	Input Capacitance: RAS, UCAS, LCAS, WE, OE	7	pF
C _{IO}	Data Input/Output Capacitance: I/O0-I/O15	7	pF

Notes:

1. Tested initially and after any design or process changes that may affect these parameters.
 2. Test conditions: T_A = 25°C, f = 1 MHz,

ELECTRICAL CHARACTERISTICS⁽¹⁾

(Recommended Operation Conditions unless otherwise noted.)

Symbol	Parameter	Test Condition	V _{DD}	Max.	Unit
I _{DD1}	Stand-by Current: TTL	RAS, LCAS, UCAS $\geq V_{IH}$	5V	2	mA
			3.3V	2	mA
I _{DD2}	Stand-by Current: CMOS	RAS, LCAS, UCAS $\geq V_{DD} - 0.2V$	5V	1	mA
			3.3V	1	mA
I _{DD3}	Operating Current: Random Read/Write ^(2,3,4) Average Power Supply Current	RAS, LCAS, UCAS, Address Cycling, t _{RC} = t _{RC} (min.)	5V	150	mA
			3.3V	90	mA
I _{DD4}	Operating Current: EDO Page Mode ^(2,3,4) Average Power Supply Current	RAS = V _{IL} , LCAS, UCAS, Cycling t _{PC} = t _{PC} (min.)	5V	60	mA
			3.3V	30	mA
I _{DD5}	Refresh Current: RAS-Only ^(2,3) Average Power Supply Current	RAS Cycling, LCAS, UCAS $\geq V_{IH}$ t _{RC} = t _{RC} (min.)	5V	90	mA
			3.3V	60	mA
I _{DD6}	Refresh Current: CBR ^(2,3,5) Average Power Supply Current	RAS, LCAS, UCAS Cycling t _{RC} = t _{RC} (min.)	5V	90	mA
			3.3V	60	mA

Notes:

1. An initial pause of 200 μs is required after power-up followed by eight RAS refresh cycles (RAS-Only or CBR) before proper device operation is assured. The eight RAS cycles wake-up should be repeated any time the t_{REF} refresh requirement is exceeded.
2. Dependent on cycle rates.
3. Specified values are obtained with minimum cycle time and the output open.
4. Column-address is changed once each EDO page cycle.
5. Enables on-chip refresh and address counters.

AC TEST CONDITIONS

Output load: Two TTL Loads and 100 pF ($V_{DD} = 5.0V \pm 10\%$)
One TTL Load and 50 pF ($V_{DD} = 3.3V \pm 10\%$)

Input timing reference levels: $V_{IH} = 2.4V$, $V_{IL} = 0.8V$ ($V_{DD} = 5.0V \pm 10\%$);
 $V_{IH} = 2.0V$, $V_{IL} = 0.8V$ ($V_{DD} = 3.3V \pm 10\%$)

Output timing reference levels: $V_{OH} = 2.4V$, $V_{OL} = 0.4V$ ($V_{DD} = 5V \pm 10\%$, $3.3V \pm 10\%$)

Notes:

1. An initial pause of 200 μs is required after power-up followed by eight \overline{RAS} refresh cycle (\overline{RAS} -Only or CBR) before proper device operation is assured. The eight \overline{RAS} cycles wake-up should be repeated any time the t_{REF} refresh requirement is exceeded.
2. V_{IH} (MIN) and V_{IL} (MAX) are reference levels for measuring timing of input signals. Transition times, are measured between V_{IH} and V_{IL} (or between V_{IL} and V_{IH}) and assume to be 1 ns for all inputs.
3. In addition to meeting the transition rate specification, all input signals must transit between V_{IH} and V_{IL} (or between V_{IL} and V_{IH}) in a monotonic manner.
4. If \overline{CAS} and $\overline{RAS} = V_{IH}$, data output is High-Z.
5. If $\overline{CAS} = V_{IL}$, data output may contain data from the last valid READ cycle.
6. Measured with a load equivalent to one TTL gate and 50 pF.
7. Assumes that $t_{RCD} \leq t_{RCD}$ (MAX). If t_{RCD} is greater than the maximum recommended value shown in this table, t_{RAC} will increase by the amount that t_{RCD} exceeds the value shown.
8. Assumes that $t_{RCD} \geq t_{RCD}$ (MAX).
9. If \overline{CAS} is LOW at the falling edge of \overline{RAS} , data out will be maintained from the previous cycle. To initiate a new cycle and clear the data output buffer, \overline{CAS} and \overline{RAS} must be pulsed for t_{CP} .
10. Operation with the t_{RCD} (MAX) limit ensures that t_{RAC} (MAX) can be met. t_{RCD} (MAX) is specified as a reference point only; if t_{RCD} is greater than the specified t_{RCD} (MAX) limit, access time is controlled exclusively by t_{CAC} .
11. Operation within the t_{RAD} (MAX) limit ensures that t_{RCD} (MAX) can be met. t_{RAD} (MAX) is specified as a reference point only; if t_{RAD} is greater than the specified t_{RAD} (MAX) limit, access time is controlled exclusively by t_{AA} .
12. Either t_{RCH} or t_{RRH} must be satisfied for a READ cycle.
13. t_{OFF} (MAX) defines the time at which the output achieves the open circuit condition; it is not a reference to V_{OH} or V_{OL} .
14. t_{WCS} , t_{RWL} , t_{AWD} and t_{CWL} are restrictive operating parameters in LATE WRITE and READ-MODIFY-WRITE cycle only. If $t_{WCS} \geq t_{WCS}$ (MIN), the cycle is an EARLY WRITE cycle and the data output will remain open circuit throughout the entire cycle. If $t_{RWL} \geq t_{RWL}$ (MIN), $t_{AWD} \geq t_{AWD}$ (MIN) and $t_{CWL} \geq t_{CWL}$ (MIN), the cycle is a READ-WRITE cycle and the data output will contain data read from the selected cell. If neither of the above conditions is met, the state of I/O (at access time and until \overline{CAS} and \overline{RAS} or \overline{OE} go back to V_{IH}) is indeterminate. \overline{OE} held HIGH and \overline{WE} taken LOW after \overline{CAS} goes LOW result in a LATE WRITE (\overline{OE} -controlled) cycle.
15. Output parameter (I/O) is referenced to corresponding \overline{CAS} input, I/O0-I/O7 by \overline{LCAS} and I/O8-I/O15 by \overline{UCAS} .
16. During a READ cycle, if \overline{OE} is LOW then taken HIGH before CAS goes HIGH, I/O goes open. If \overline{OE} is tied permanently LOW, a LATE WRITE or READ-MODIFY-WRITE is not possible.
17. Write command is defined as \overline{WE} going low.
18. LATE WRITE and READ-MODIFY-WRITE cycles must have both t_{OD} and t_{OEH} met (\overline{OE} HIGH during WRITE cycle) in order to ensure that the output buffers will be open during the WRITE cycle. The I/Os will provide the previously written data if CAS remains LOW and \overline{OE} is taken back to LOW after t_{OEH} is met.
19. The I/Os are in open during READ cycles once t_{OD} or t_{OFF} occur.
20. The first $\chi\overline{CAS}$ edge to transition LOW.
21. The last $\chi\overline{CAS}$ edge to transition HIGH.
22. These parameters are referenced to \overline{CAS} leading edge in EARLY WRITE cycles and \overline{WE} leading edge in LATE WRITE or READ-MODIFY-WRITE cycles.
23. Last falling $\chi\overline{CAS}$ edge to first rising $\chi\overline{CAS}$ edge.
24. Last rising $\chi\overline{CAS}$ edge to next cycle's last rising $\chi\overline{CAS}$ edge.
25. Last rising $\chi\overline{CAS}$ edge to first falling $\chi\overline{CAS}$ edge.
26. Each $\chi\overline{CAS}$ must meet minimum pulse width.
27. Last $\chi\overline{CAS}$ to go LOW.
28. I/Os controlled, regardless \overline{UCAS} and \overline{LCAS} .
29. The 3 ns minimum is a parameter guaranteed by design.
30. Enables on-chip refresh and address counters.

READ CYCLE

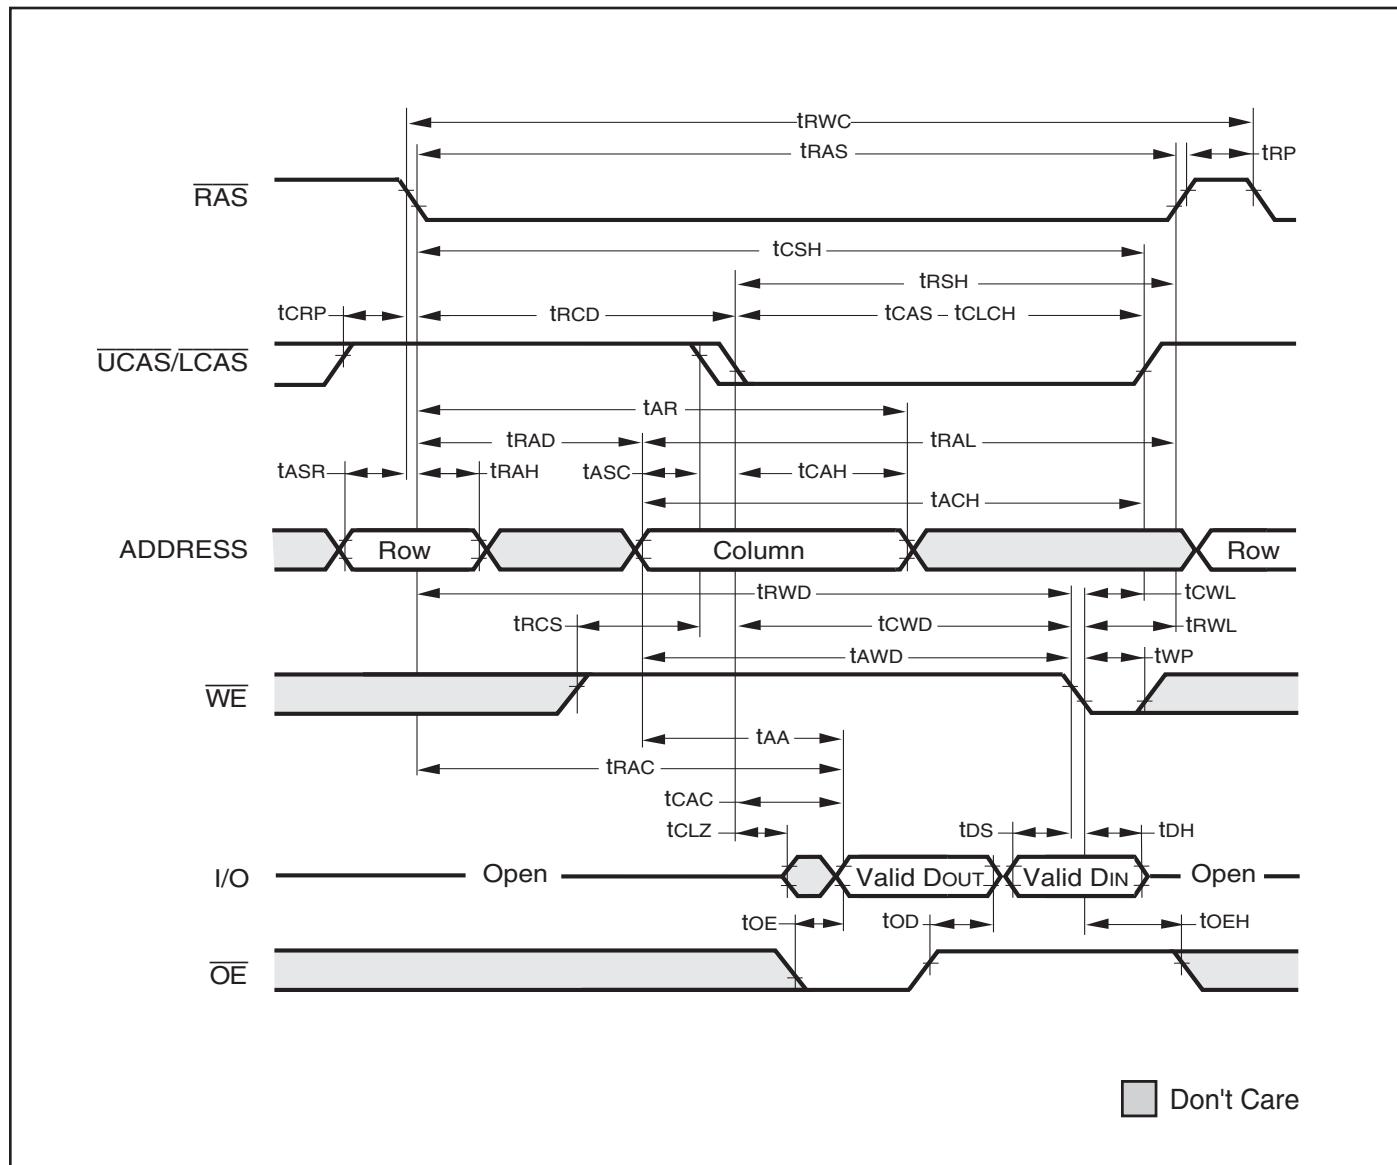

Note:

1. tOFF is referenced from rising edge of RAS or CAS, whichever occurs last.

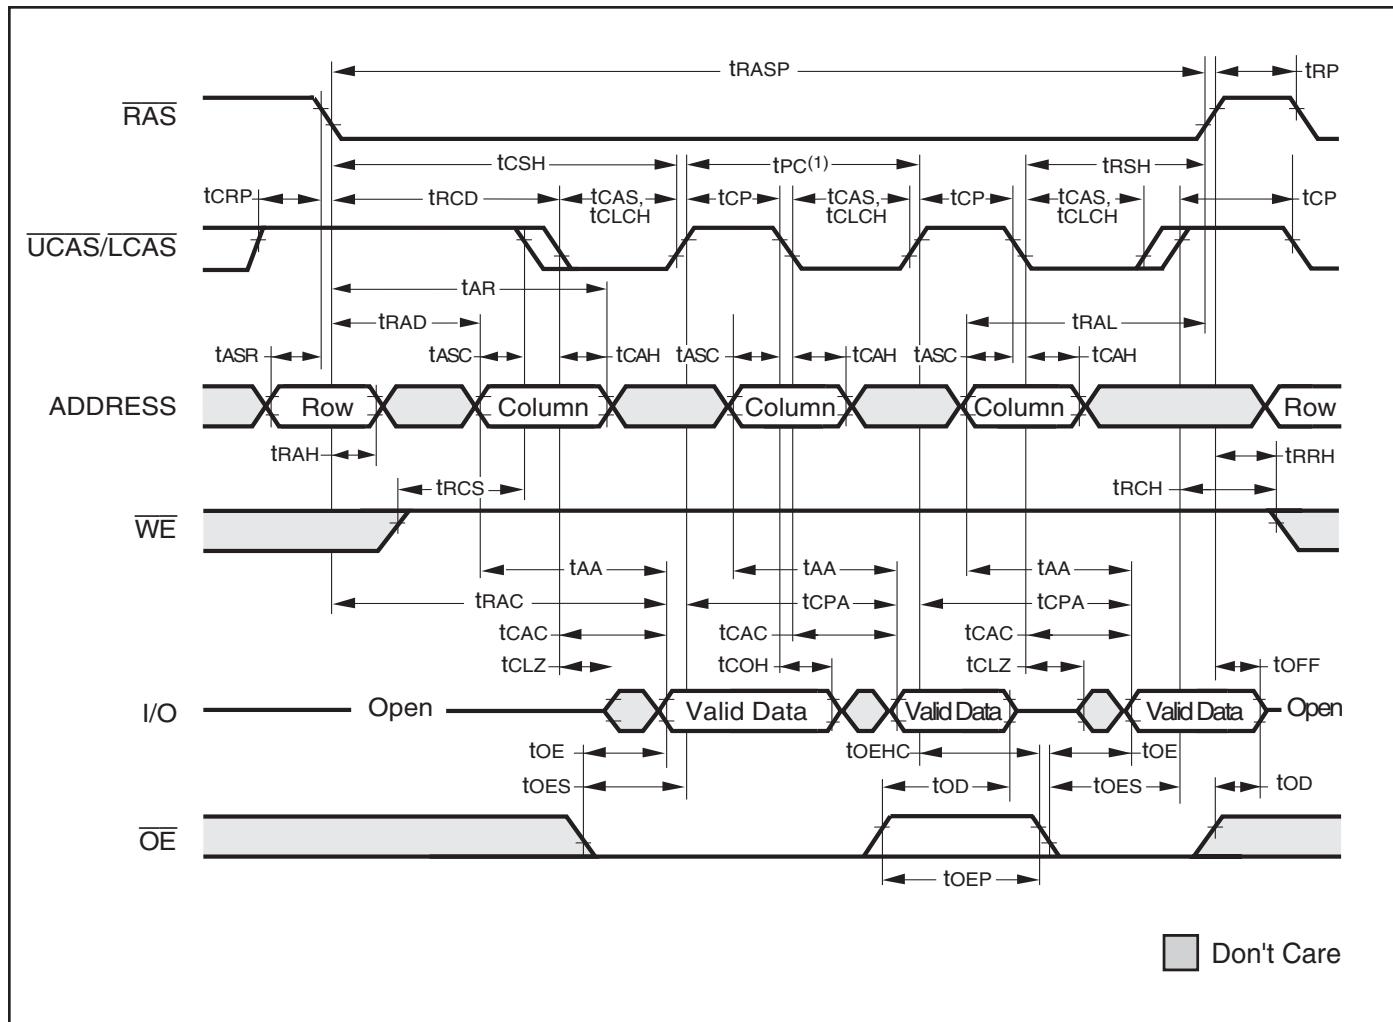

EARLY WRITE CYCLE (\overline{OE} = DON'T CARE)

READ WRITE CYCLE (LATE WRITE and READ-MODIFY-WRITE Cycles)

EDO-PAGE-MODE READ CYCLE

Note:

1. tpc can be measured from falling edge of $\overline{\text{CAS}}$ to falling edge of $\overline{\text{CAS}}$, or from rising edge of $\overline{\text{CAS}}$ to rising edge of $\overline{\text{CAS}}$. Both measurements must meet the tpc specifications.

EDO-PAGE-MODE EARLY-WRITE CYCLE

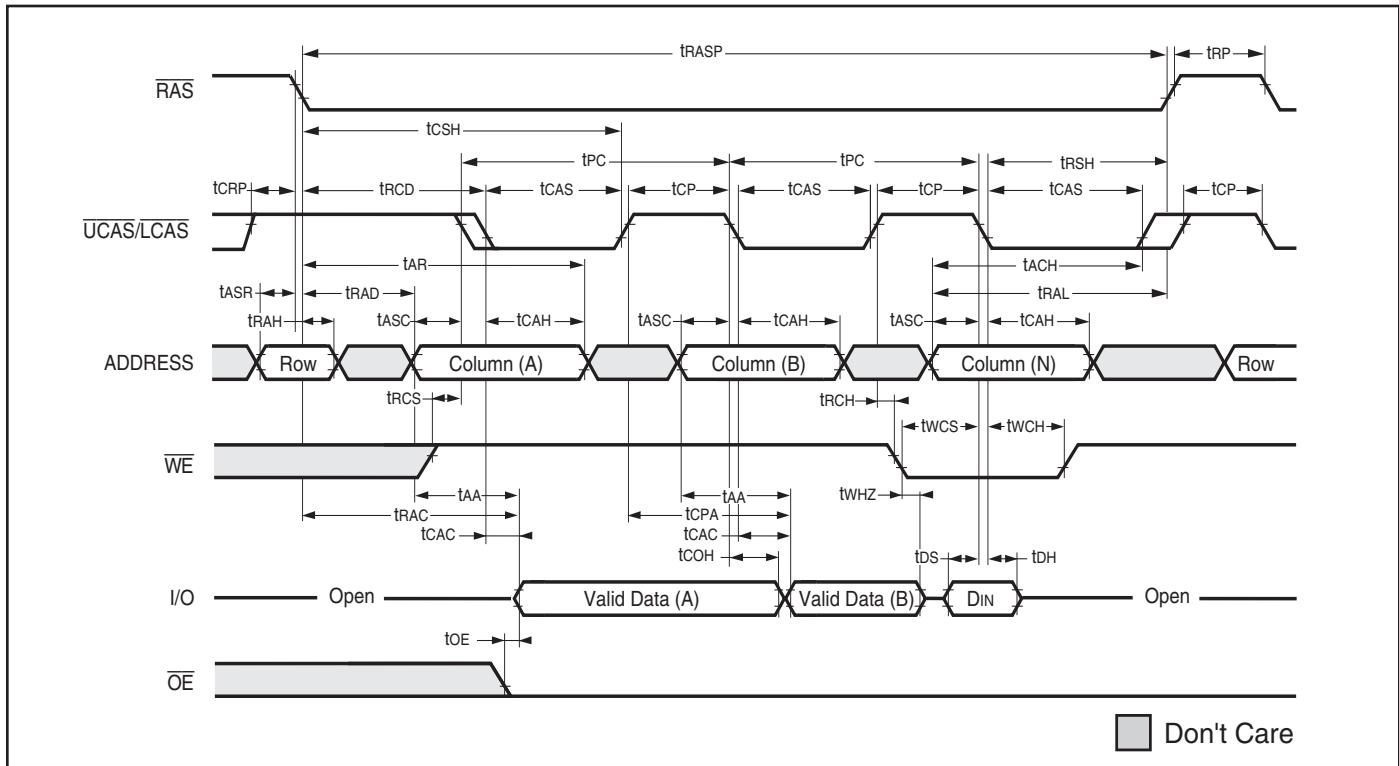

EDO-PAGE-MODE READ-WRITE CYCLE (LATE WRITE and READ-MODIFY WRITE Cycles)

Note:

1. tPC can be measured from falling edge of $\overline{\text{CAS}}$ to falling edge of $\overline{\text{CAS}}$, or from rising edge of $\overline{\text{CAS}}$ to rising edge of $\overline{\text{CAS}}$. Both measurements must meet the tPC specifications.

EDO-PAGE-MODE READ-EARLY-WRITE CYCLE (Pseudo READ-MODIFY WRITE)

AC WAVEFORMS

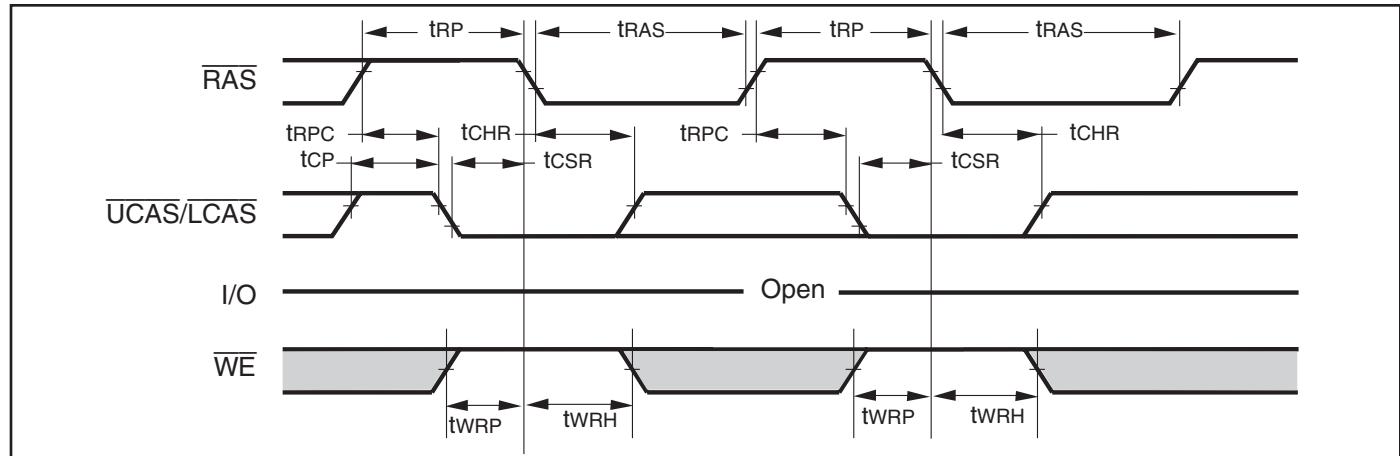

READ CYCLE (With \overline{WE} -Controlled Disable)

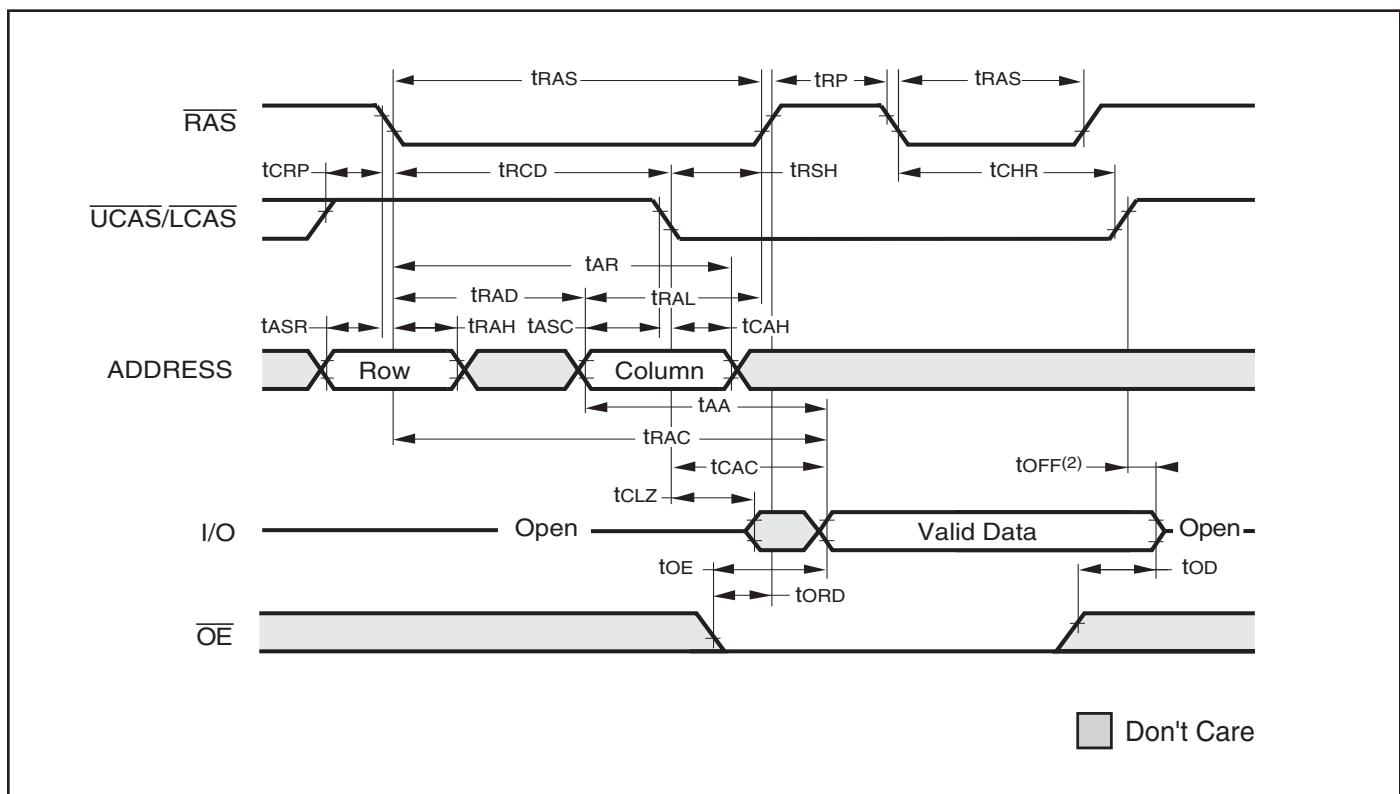

\overline{RAS} -ONLY REFRESH CYCLE (\overline{OE} , \overline{WE} = DON'T CARE)

CBR REFRESH CYCLE (Addresses; \overline{OE} = DON'T CARE)

HIDDEN REFRESH CYCLE (\overline{WE} = HIGH; \overline{OE} = LOW)⁽¹⁾

Notes:

1. A Hidden Refresh may also be performed after a Write Cycle. In this case, \overline{WE} = LOW and \overline{OE} = HIGH.
2. t_{OFF} is referenced from rising edge of \overline{RAS} or \overline{CAS} , whichever occurs last.

Связь**

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
