

# 0.7Ω, Low-Voltage, Quad 2:1 Analog Multiplexers

MAX4780/MAX4784

## General Description

The MAX4780/MAX4784 are low on-resistance, low-voltage, quad 2:1 analog multiplexers that operate from a single +1.6V to +4.2V supply. These devices have fast switching speeds ( $t_{ON} = 20ns$ ,  $t_{OFF} = 8ns$ ), handle rail-to-rail analog signals, and consume less than 1μW of quiescent power.

When powered from a +2.7V supply, the MAX4780/MAX4784 feature low 0.7Ω on-resistance ( $R_{ON}$ ), and 0.1Ω  $R_{ON}$  flatness. The digital logic input is +1.8V CMOS-logic compatible when using a single +3V supply.

The MAX4780/MAX4784 are available in 16-pin TSSOP and 3mm x 3mm thin QFN packages.

## Applications

- Power Routing
- Battery-Powered Systems
- Audio and Video Signal Routing
- Low-Voltage Data-Acquisition Systems
- Communications Circuits
- PCMCIA Cards
- Cellular Phones
- Modems
- Hard Drives

## Features

- ◆ Single-Supply Operation from 1.6V to 4.2V
- ◆ Low  $R_{ON}$   
0.7Ω (+2.7V Supply)  
2Ω (+1.8V Supply)
- ◆ 0.1Ω  $R_{ON}$  Flatness (+2.7V Supply)
- ◆ 3mm x 3mm Thin QFN Package
- ◆ +1.8V CMOS Logic Compatible
- ◆ Fast Switching:  $t_{ON} = 20ns$ ,  $t_{OFF} = 8ns$

**Note 1:** Signals on COM\_, NO\_, or NC\_ exceeding V+ or GND are clamped by internal diodes. Limit forward current to maximum current rating.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## Detailed Description

The MAX4780/MAX4784 are low 0.7Ω (at V+ = +2.7V) on-resistance, low-voltage, quad 2:1 analog multiplexers/demultiplexers that operate from a +1.6V to +4.2V single supply. CMOS switch construction allows switching analog signals that are within the supply voltage range (GND to V+).

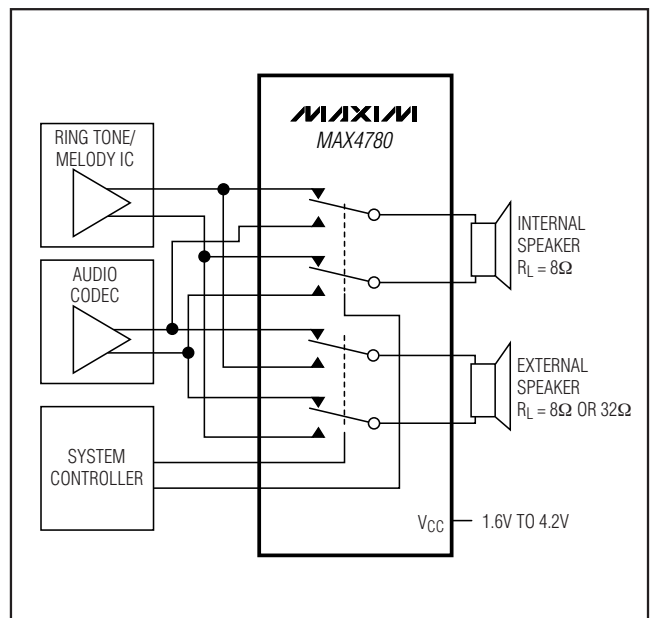

When powered from a +2.7V supply, the 0.7Ω R<sub>ON</sub> allows high continuous currents to be switched in a variety of applications.

## Applications Information

Proper power-supply sequencing is recommended for all CMOS devices. Do not exceed the absolute maximum ratings, because stresses beyond the listed ratings can cause permanent damage to the devices. Always sequence V+ on first, followed by NO\_, NC\_, or COM\_.

Although it is not required, power-supply bypassing improves noise margin and prevents switching noise propagation from the V+ supply to other components. A 0.1μF capacitor, connected from V+ to GND, is adequate for most applications.

## Typical Application Circuit

# 0.7Ω, Low-Voltage, Quad 2:1 Analog Multiplexers

### Logic Inputs

The MAX4780/MAX4784 logic inputs can be driven up to +4.2V regardless of the supply voltage. For example, with a +1.8V supply, A<sub>-</sub> and EN̄ may be driven low to GND and high to +4.2V. Driving A<sub>-</sub> and EN̄ rail-to-rail minimizes power consumption. Drive EN̄ low to enable the COM<sub>-</sub> outputs. When EN̄ is high, the COM<sub>-</sub> outputs are high impedance.

### Analog Signal Levels

Analog signals that range over the entire supply voltage (V<sub>+</sub> to GND) can be passed with very little change in on-

resistance (see the *Typical Operating Characteristics*). The switches are bidirectional, so the NO<sub>-</sub>, NC<sub>-</sub>, and COM<sub>-</sub> pins can be used as either inputs or outputs.

### Layout

High-speed switches require proper layout and design procedures for optimum performance. Reduce stray inductance and capacitance by keeping traces short and wide. Ensure that bypass capacitors are as close to the device as possible. Use large ground planes where possible.

## Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
