Operational Amplifiers Series

# Ground Sense Low Power General Purpose Operational Amplifiers

## LMR321G, LMR358xxx, LMR324xxx

### ●General Description

LMR321, LMR358 and LMR324 are single, dual and quad low voltage operational amplifier with output full swing.
LMR321, LMR358 and LMR324 are the most effective solutions for applications where low supply current consumption and low voltage operation.

### ●Features

- Operable with low voltage
- Input Ground Sense, Output Full Swing
- High open loop voltage gain
- Low supply current
- Low input offset voltage

### ●Packages

| | W(Typ.) x D(Typ.) x H(Max.) |
|---|---|
| SSOP5 | 2.90mm x 2.80mm x 1.25mm |
| SOP8 | 5.00mm x 6.20mm x 1.71mm |
| SOP-J8 | 4.90mm x 6.00mm x 1.65mm |
| SSOP-B8 | 3.00mm x 6.40mm x 1.35mm |
| TSSOP-B8 | 3.00mm x 6.40mm x 1.20mm |
| MSOP8 | 2.90mm x 4.00mm x 0.90mm |
| TSSOP-B8J | 3.00mm x 4.90mm x 1.10mm |
| SOP14 | 8.70mm x 6.20mm x 1.71mm |
| SOP-J14 | 8.65mm x 6.00mm x 1.65mm |
| SSOP-B14 | 5.00mm x 6.40mm x 1.35mm |
| TSSOP-B14J | 5.00mm x 6.40mm x 1.20mm |

### ●Applications

- Portable equipment
- Low voltage application
- Active filter

### ●Key Specifications

- Operable with low voltage (single supply): +2.7V to +5.5V
- Low Supply Current:
  - LMR321 130µA(Typ.)
  - LMR358 210µA(Typ.)
  - LMR324 410µA(Typ.)
- High Slew Rate: 1.0V/µs(Typ.)
- Wide Temperature Range: -40°C to +85°C
- Low Input Offset Current: 5nA (Typ.)
- Low Input Bias Current: 15nA (Typ.)

### ●Simplified schematic

●**Absolute Maximum Ratings**(Ta=25℃)

| Parameter | Symbol | | Rating | | | Unit |
|---|---|---|---|---|---|---|
| | | | LMR321G | LMR358 | LMR324 | |
| Supply Voltage | VDD-VSS | | +7 | | | V |
| Power dissipation | Pd | SSOP5 | 675[*1*9] | - | - | mW |
| | | SOP-J8 | - | 675[*1*9] | - | |
| | | SOP8 | - | 690[*2*9] | - | |
| | | SSOP-B8 | - | 625[*3*9] | - | |
| | | TSSOP-B8 | - | 625[*3*9] | - | |
| | | MSOP8 | - | 587[*4*9] | - | |
| | | TSSOP-B8J | - | 587[*4*9] | - | |
| | | SOP-J14 | - | - | 1025[*5*9] | |
| | | SSOP-B14 | - | - | 875[*6*9] | |
| | | TSSOP-B14J | - | - | 850[*7*9] | |
| | | SOP14 | - | - | 562[*8*9] | |
| Differential Input Voltage[*10] | Vid | | VDD - VSS | | | V |
| Input Common-mode Voltage Range | Vicm | | (VSS-0.3) to (VDD+0.3) | | | V |
| Operable with low voltage | Vopr | | +2.7 to +5.5 | | | V |
| Operating Temperature | Topr | | -40 to +85 | | | ℃ |
| Storage Temperature | Tstg | | -55 to +150 | | | ℃ |
| Maximum Junction Temperature | Tjmax | | +150 | | | ℃ |

Note: Absolute maximum rating item indicates the condition which must not be exceeded.
Application of voltage in excess of absolute maximum rating or use out absolute maximum rated temperature environment may cause deterioration of characteristics.

*1 To use at temperature above Ta＝25℃ reduce 5.4mW/℃.
*2 To use at temperature above Ta＝25℃ reduce 5.52mW/℃.
*3 To use at temperature above Ta＝25℃ reduce 5mW/℃.
*4 To use at temperature above Ta＝25℃ reduce 4.7mW/℃.
*5 To use at temperature above Ta＝25℃ reduce 8.2mW/℃.
*6 To use at temperature above Ta＝25℃ reduce 7mW/℃.
*7 To use at temperature above Ta＝25℃ reduce 6.8mW/℃.
*8 To use at temperature above Ta＝25℃ reduce 4.5mW/℃.
*9 Mounted on a glass epoxy PCB(70mm×70mm×1.6mm).
*10 The voltage difference between inverting input and non-inverting input is the differential input voltage. Then input terminal voltage is set to more than VSS.

**Description of electrical characteristics**

Described here are the terms of electric characteristics used in this datasheet. Items and symbols used are also shown. Note that item name and symbol and their meaning may differ from those on another manufacture's document or general document.

1. Absolute maximum ratings

Absolute maximum rating item indicates the condition which must not be exceeded. Application of voltage in excess of absolute maximum rating or use out of absolute maximum rated temperature environment may cause deterioration of characteristics.

1.1 Power supply voltage (VDD/VSS)
Indicates the maximum voltage that can be applied between the positive power supply terminal and negative power supply terminal without deterioration or destruction of characteristics of internal circuit.

1.2 Differential input voltage (Vid)
Indicates the maximum voltage that can be applied between non-inverting terminal and inverting terminal without deterioration and destruction of characteristics of IC.

1.3 Input common-mode voltage range (Vicm)
Indicates the maximum voltage that can be applied to non-inverting terminal and inverting terminal without deterioration or destruction of characteristics. Input common-mode voltage range of the maximum ratings not assures normal operation of IC. When normal Operation of IC is desired, the input common-mode voltage of characteristics item must be followed.

1.4 Power dissipation (Pd)
Indicates the power that can be consumed by specified mounted board at the ambient temperature 25℃(normal temperature).
As for package product, Pd is determined by the temperature that can be permitted by IC chip in the package (maximum junction temperature) and thermal resistance of the package.

2.Electrical characteristics item

2.1 Input offset voltage (Vio)
Indicates the voltage difference between non-inverting terminal and inverting terminal. It can be translated into the input voltage difference required for setting the output voltage at 0 V.

2.2 Input offset voltage drift (△Vio/△T)
Denotes the ratio of the input offset voltage fluctuation to the ambient temperature fluctuation.

2.3 Input offset current (Iio)
Indicates the difference of input bias current between non-inverting terminal and inverting terminal.

2.4 Input bias current (Ib)
Indicates the current that flows into or out of the input terminal. It is defined by the average of input bias current at non-inverting terminal and input bias current at inverting terminal.

2.5 Circuit current (IDD)
Indicates the IC current that flows under specified conditions and no-load steady status.

2.6 Maximum Output Voltage(High) / Maximum Output Voltage(Low) (VOH/VOL)
Indicates the voltage range that can be output by the IC under specified load condition. It is typically divided into maximum output voltage High and low. Maximum output voltage high indicates the upper limit of output voltage. Maximum output voltage low indicates the lower limit.

2.7 Large signal voltage gain (Av)
Indicates the amplifying rate (gain) of output voltage against the voltage difference between non-inverting terminal and inverting terminal. It is normally the amplifying rate (gain) with reference to DC voltage.
Av = (Output voltage fluctuation) / (Input offset fluctuation)

2.8 Input common-mode voltage range (Vicm)
Indicates the input voltage range where IC operates normally.

2.9 Common-mode rejection ratio (CMRR)
Indicates the ratio of fluctuation of input offset voltage when in-phase input voltage is changed. It is normally the fluctuation of DC.
CMRR = (Change of Input common-mode voltage)/(Input offset fluctuation)

2.10 Power supply rejection ratio (PSRR)
Indicates the ratio of fluctuation of input offset voltage when supply voltage is changed. It is normally the fluctuation of DC. PSRR= (Change of power supply voltage)/(Input offset fluctuation)

2.11 Output source current/ output sink current (Isource/Isink)
The maximum current that can be output under specific output conditions, it is divided into output source current and output sink current. The output source current indicates the current flowing out of the IC, and the output sink current the current flowing into the IC.

2.12 Channel separation (CS)
Indicates the fluctuation of output voltage with reference to the change of output voltage of driven channel.

2.13 Slew Rate (SR)
SR is a parameter that shows movement speed of operational amplifier. It indicates rate of variable output voltage as unit time.

2.14 Unity gain frequency ($f_T$)
Indicates a frequency where the voltage gain of Op-Amp is 1.

© 2012 ROHM Co., Ltd. All rights reserved.

2.15 Gain Band Width (GBW)

Indicates to multiply by the frequency and the gain where the voltage gain decreases 6dB/octave.

2.16 Phase Margin (θ)

Indicates the margin of phase from 180 degree phase lag at unity gain frequency.

2.17 Gain Margin (GM)

Indicates the difference between 0dB and the gain where operational amplifier has 180 degree phase delay.

2.18 Total harmonic distortion + Noise (THD+N)

Indicates the fluctuation of input offset voltage or that of output voltage with reference to the change of output voltage of driven channel.

2.19 Input referred noise voltage (Vn)

Indicates a noise voltage generated inside the operational amplifier equivalent by ideal voltage source connected in series with input terminal.

## ●Application Information

**NULL method condition for Test Circuit 1**

VDD, VSS, EK, Vicm Unit:V

| Parameter | VF | S1 | S2 | S3 | VDD | VSS | EK | Vicm | Calculation |
|---|---|---|---|---|---|---|---|---|---|
| Input Offset Voltage | VF1 | ON | ON | OFF | 5 | 0 | -2.5 | 2.1 | 1 |
| Large Signal Voltage Gain | VF2 | ON | ON | ON | 5 | 0 | -1.5 | 2.1 | 2 |
| | VF3 | | | | | | -3.5 | | |
| Common-mode Rejection Ratio (Input Common-mode Voltage Range) | VF4 | ON | ON | OFF | 5 | 0 | -1.5 | 0 | 3 |
| | VF5 | | | | | | | 1.8 | |
| Power Supply Rejection Ratio | VF6 | ON | ON | OFF | 3 | 0 | -2.9 | 4 | 4 |
| | VF7 | | | | 5 | | | | |

－ Calculation－

1. Input Offset Voltage (Vio)

$$Vio = \frac{|VF1|}{1+RF/RS} \ [V]$$

2. Large Signal Voltage Gain(Av)

$$Av = 20Log \frac{2 \times (1+RF/RS)}{|VF2-VF3|} \ [dB]$$

3. Common-mode Rejection Ratio (CMRR)

$$CMRR = 20Log \frac{1.8 \times (1+RF/RS)}{|VF4 - VF5|} \ [dB]$$

4. Power Supply Rejection Ratio (PSRR)

$$PSRR = 20Log \frac{3.8 \times (1+ RF/RS)}{|VF6 - VF7|} \ [dB]$$

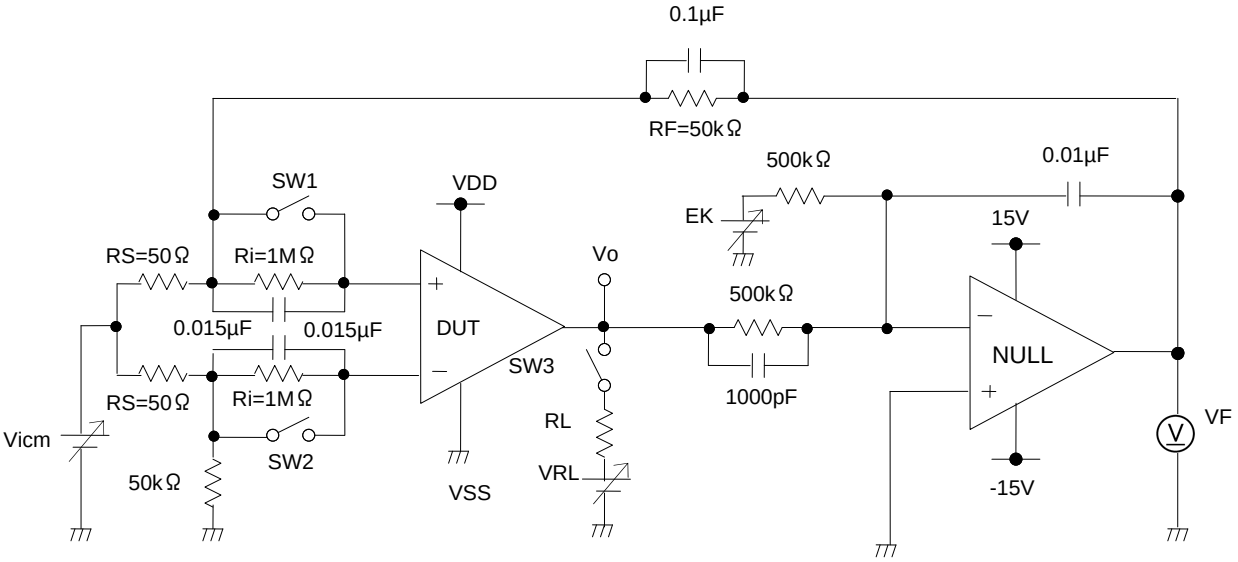

Figure 74. Test circuit 1 (one channel only)

**Application example**

○Voltage Follower

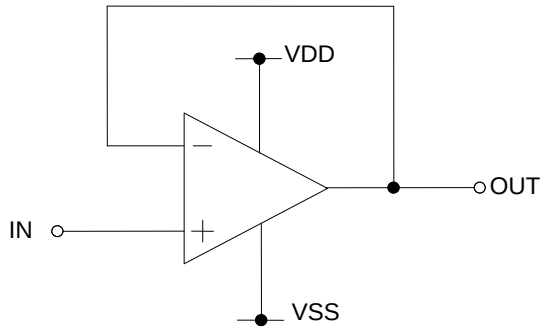

Figure 78. Voltage follower

Voltage gain is 0 dB.
This circuit controls output voltage (OUT) equal input voltage (IN), and keeps OUT with stable because of high input impedance and low output impedance.
OUT is shown next expression.
OUT=IN

○Inverting amplifier

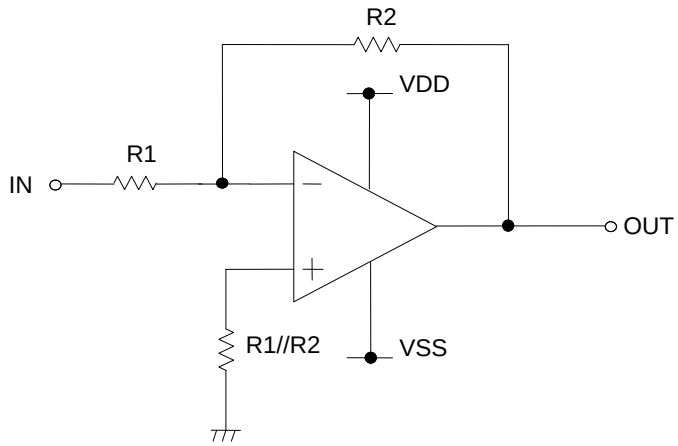

Figure 79. Inverting amplifier

For inverting amplifier, IN is amplified by voltage gain decided R1 and R2, and phase reversed voltage is output.
OUT is shown next expression.
OUT=-(R2/R1)・IN
Input impedance is R1.

○Non-inverting amplifier

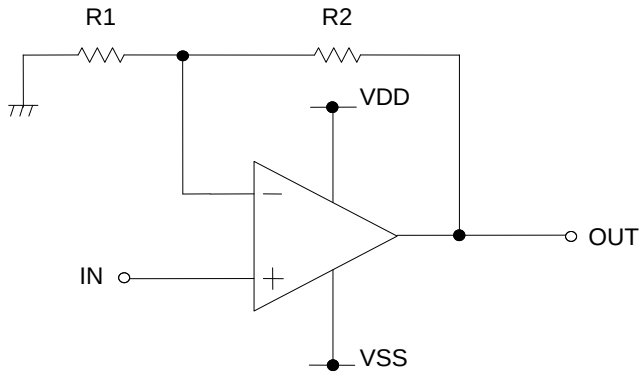

Figure 80. Non-inverting amplifier

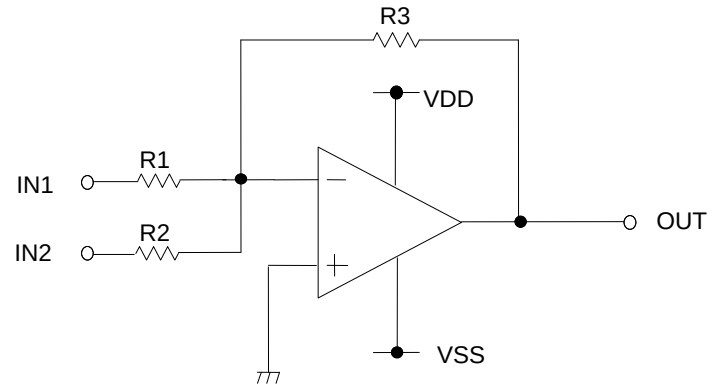
For non-inverting amplifier, IN is amplified by voltage gain decided R1 and R2, and phase is same with Vin.
OUT is shown next expression.
OUT=(1+R2/R1)・IN
This circuit performes high input impedance because Input impedance is operational amplifier's input Impedance.

© 2012 ROHM Co., Ltd. All rights reserved.

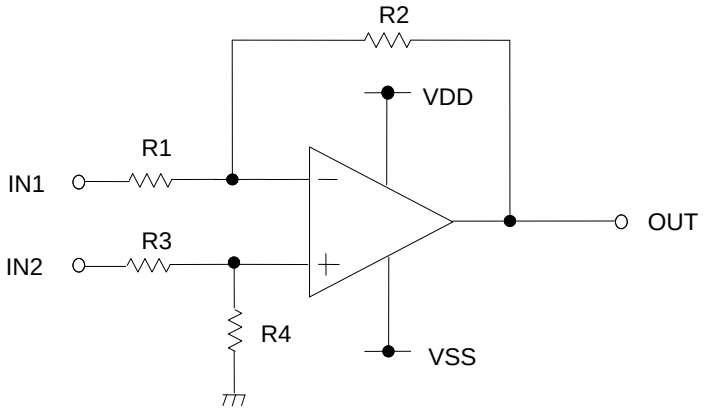
○Adder circuit



Adder circuit output the voltage that added up Input voltage. A phase of the output voltage turns over, because non-inverting circuit is used.
OUT is shown next formula.
OUT = -R3(IN1/R1+IN2/R2)
When three input voltage is as above, it connects with input through resistance like R1 and R2.

Figure 81. Adder circuit

○Differential amplifier



Differential amplifier output the voltage that amplified a difference of input voltage.
In the case of R1=R3=Ra, R2=R4=Rb
OUT is shown next formula.
OUT = -Rb/Ra(IN1-IN2)

Figure 82. Differential amplifier

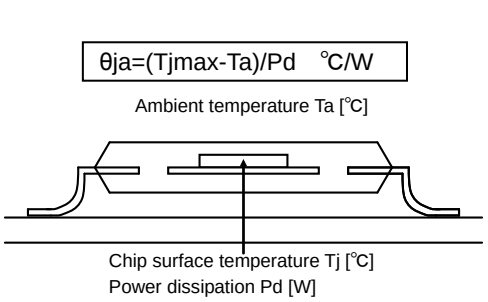
## ●Power Dissipation

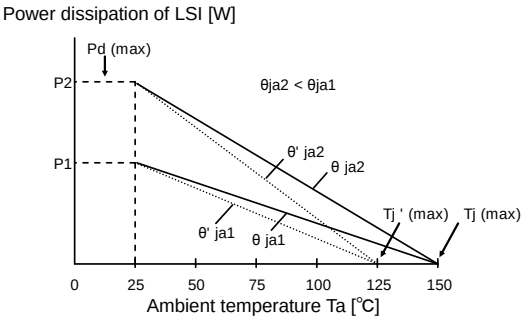
Power dissipation (total loss) indicates the power that can be consumed by IC at Ta=25℃(normal temperature). IC is heated when it consumed power, and the temperature of IC ship becomes higher than ambient temperature. The temperature that can be accepted by IC chip depends on circuit configuration, manufacturing process, and consumable power is limited. Power dissipation is determined by the temperature allowed in IC chip (maximum junction temperature) and thermal resistance of package (heat dissipation capability).The maximum junction temperature is typically equal to the maximum value in the storage package (heat dissipation capability).The maximum junction temperature is typically equal to the maximum value in the storage temperature range. Heat generated by consumed power of IC radiates from the mold resin or lead frame of the package. The parameter which indicates this heat dissipation capability (hardness of heat release) is called thermal resistance, represented by the symbol θja℃/W. The temperature of IC inside the package can be estimated by this thermal resistance. Figure 83. (a) shows the model of thermal resistance of the package. Thermal resistance θja, ambient temperature Ta, maximum junction temperature Tjmax, and power dissipation Pd can be calculated by the equation below:

θja = (Tjmax-Ta) / Pd ℃/W ・・・・・ (Ⅰ)

Derating curve in Figure 83. (b) indicates power that can be consumed by IC with reference to ambient temperature. Power that can be consumed by IC begins to attenuate at certain ambient temperature. This gradient iis determined by thermal resistance θja. Thermal resistance θja depends on chip size, power consumption, package, ambient temperature, package condition, wind velocity, etc even when the same of package is used. Thermal reduction curve indicates a reference value measured at a specified condition. Figure 84 (c)-(e) show a derating curve for an example LMR321, LMR358, LMR324.

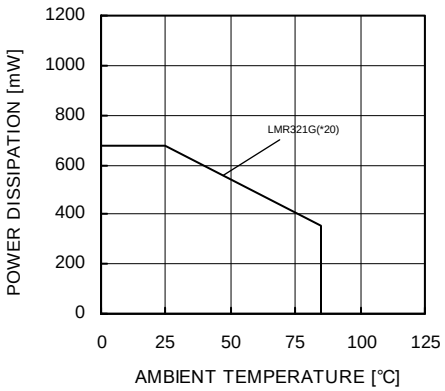


(a) Thermal resistance

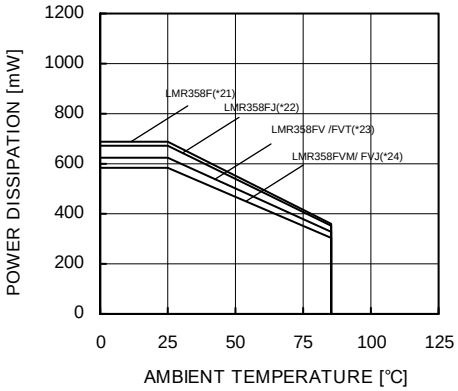


(b) Derating curve

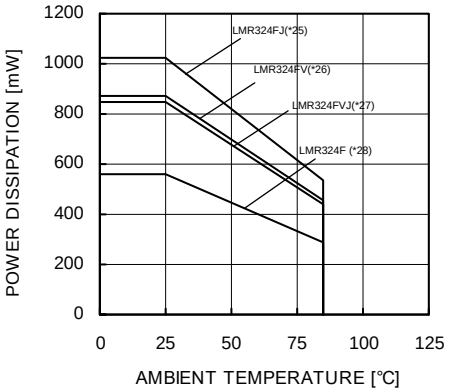
Figure 83. Thermal resistance and derating



(c) LMR321



(d) LMR358



(e) LMR324

| (*20) | (*21) | (*22) | (*23) | (*24) | (*25) | (*26) | (*27) | (*28) | Unit |
|---|---|---|---|---|---|---|---|---|---|
| 5.4 | 5.52 | 5.4 | 5.0 | 4.7 | 8.2 | 7.0 | 6.8 | 4.5 | mW/℃ |

When using the unit above Ta=25℃, subtract the value above per degree℃. Permissible dissipation is the value.
When FR4 glass epoxy board 70mm×70mm×1.6mm (cooper foil area below 3%) is mounted.

Figure 84. Thermal resistance and derating

## ●Operational Notes

1) Processing of unused circuit
It is recommended to apply connection (see the Figure 85.) and set the non inverting input terminal at the potential within input common-mode voltage range (Vicm), for any unused circuit.

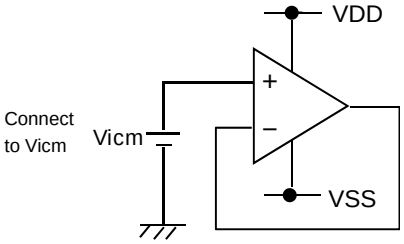

Figure 85. The example of application circuit for unused op-amp

2) Applied voltage to the input terminal
For normal circuit operation of voltage comparator, please input voltage for its input terminal within input common mode voltage VDD + 0.3V. Then, regardless of power supply voltage, VSS-0.3V can be applied to input terminals without deterioration or destruction of its characteristics.

3) Short-circuit of output terminal
When output terminal and VDD or VSS terminal are shorted, excessive Output current may flow under some conditions, and heating may destroy IC. It is necessary to connect a resistor as shown in Figure 86, thereby protecting against load shorting.

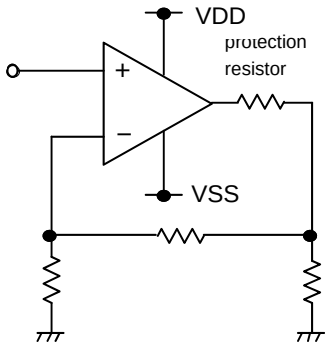

Figure 86. The example of output short protection

4) Operating power supply (split power supply/single power supply)
The voltage comparator operates if a given level of voltage is applied between VDD and VSS. Therefore, the operational amplifier can be operated under single power supply or split power supply.

5) Power dissipation (pd)
If the IC is used under excessive power dissipation. An increase in the chip temperature will cause deterioration of the radical characteristics of IC. For example, reduction of current capability. Take consideration of the effective power dissipation and thermal design with a sufficient margin. Pd is reference to the provided power dissipation curve.

6) Short circuits between pins and incorrect mounting
Short circuits between pins and incorrect mounting when mounting the IC on a printed circuits board, take notice of the direction and positioning of the IC. If IC is mounted erroneously, It may be damaged. Also, when a foreign object is inserted between output, between output and VDD terminal and VSS terminal which causes short circuit, the IC may be damaged.

7) Using under strong electromagnetic field
Be careful when using the IC under strong electromagnetic field because it may malfunction.

8) Usage of IC
When stress is applied to the IC through warp of the printed circuit board, The characteristics may fluctuate due to the piezo effect. Be careful of the warp of the printed circuit board.

9) Testing IC on the set board
When testing IC on the set board, in cases where the capacitor is connected to the low impedance, make sure to discharge per fabrication because there is a possibility that IC may be damaged by stress. When removing IC from the set board, it is essential to cut supply voltage. As a countermeasure against the static electricity, observe proper grounding during fabrication process and take due care when carrying and storage it.

10) The IC destruction caused by capacitive load
The transistors in circuits may be damaged when VDD terminal and VSS terminal is shorted with the charged output terminal capacitor.When IC is used as a operational amplifier or as an application circuit, where oscillation is not activated by an output capacitor, the output capacitor must be kept below 0.1μF in order to prevent the damage mentioned above.

11) Latch up
Be careful of input voltage that exceed the VDD and VSS. When CMOS device have sometimes occur latch up operation. And protect the IC from abnormaly noise

12) Decupling capacitor
Insert the decupling capacitance between VDD and VSS, for stable operation of operational amplifier.

Status of this document

# Notice

## Precaution on using ROHM Products

1. Our Products are designed and manufactured for application in ordinary electronic equipments (such as AV equipment, OA equipment, telecommunication equipment, home electronic appliances, amusement equipment, etc.). If you intend to use our Products in devices requiring extremely high reliability (such as medical equipment (Note 1), transport equipment, traffic equipment, aircraft/spacecraft, nuclear power controllers, fuel controllers, car equipment including car accessories, safety devices, etc.) and whose malfunction or failure may cause loss of human life, bodily injury or serious damage to property ("Specific Applications"), please consult with the ROHM sales representative in advance. Unless otherwise agreed in writing by ROHM in advance, ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of any ROHM's Products for Specific Applications.

(Note1) Medical Equipment Classification of the Specific Applications

| JAPAN | USA | EU | CHINA |
|---|---|---|---|
| CLASSⅢ | CLASSⅢ | CLASSⅡb | CLASSⅢ |
| CLASSⅣ | | CLASSⅢ | |

2. ROHM designs and manufactures its Products subject to strict quality control system. However, semiconductor products can fail or malfunction at a certain rate. Please be sure to implement, at your own responsibilities, adequate safety measures including but not limited to fail-safe design against the physical injury, damage to any property, which a failure or malfunction of our Products may cause. The following are examples of safety measures:
   [a] Installation of protection circuits or other protective devices to improve system safety
   [b] Installation of redundant circuits to reduce the impact of single or multiple circuit failure

3. Our Products are designed and manufactured for use under standard conditions and not under any special or extraordinary environments or conditions, as exemplified below. Accordingly, ROHM shall not be in any way responsible or liable for any damages, expenses or losses arising from the use of any ROHM's Products under any special or extraordinary environments or conditions. If you intend to use our Products under any special or extraordinary environments or conditions (as exemplified below), your independent verification and confirmation of product performance, reliability, etc, prior to use, must be necessary:
   [a] Use of our Products in any types of liquid, including water, oils, chemicals, and organic solvents
   [b] Use of our Products outdoors or in places where the Products are exposed to direct sunlight or dust
   [c] Use of our Products in places where the Products are exposed to sea wind or corrosive gases, including $Cl_2$, $H_2S$, $NH_3$, $SO_2$, and $NO_2$
   [d] Use of our Products in places where the Products are exposed to static electricity or electromagnetic waves
   [e] Use of our Products in proximity to heat-producing components, plastic cords, or other flammable items
   [f] Sealing or coating our Products with resin or other coating materials
   [g] Use of our Products without cleaning residue of flux (even if you use no-clean type fluxes, cleaning residue of flux is recommended); or Washing our Products by using water or water-soluble cleaning agents for cleaning residue after soldering
   [h] Use of the Products in places subject to dew condensation

4. The Products are not subject to radiation-proof design.

5. Please verify and confirm characteristics of the final or mounted products in using the Products.

6. In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse. is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.

7. De-rate Power Dissipation (Pd) depending on Ambient temperature (Ta). When used in sealed area, confirm the actual ambient temperature.

8. Confirm that operation temperature is within the specified range described in the product specification.

9. ROHM shall not be in any way responsible or liable for failure induced under deviant condition from what is defined in this document.

## Precaution for Mounting / Circuit board design

1. When a highly active halogenous (chlorine, bromine, etc.) flux is used, the residue of flux may negatively affect product performance and reliability.

2. In principle, the reflow soldering method must be used; if flow soldering method is preferred, please consult with the ROHM representative in advance.

For details, please refer to ROHM Mounting specification

© 2014 ROHM Co., Ltd. All rights reserved.

### Precautions Regarding Application Examples and External Circuits

1. If change is made to the constant of an external circuit, please allow a sufficient margin considering variations of the characteristics of the Products and external components, including transient characteristics, as well as static characteristics.

2. You agree that application notes, reference designs, and associated data and information contained in this document are presented only as guidance for Products use. Therefore, in case you use such information, you are solely responsible for it and you must exercise your own independent verification and judgment in the use of such information contained in this document. ROHM shall not be in any way responsible or liable for any damages, expenses or losses incurred by you or third parties arising from the use of such information.

### Precaution for Electrostatic

This Product is electrostatic sensitive product, which may be damaged due to electrostatic discharge. Please take proper caution in your manufacturing process and storage so that voltage exceeding the Products maximum rating will not be applied to Products. Please take special care under dry condition (e.g. Grounding of human body / equipment / solder iron, isolation from charged objects, setting of Ionizer, friction prevention and temperature / humidity control).

### Precaution for Storage / Transportation

1. Product performance and soldered connections may deteriorate if the Products are stored in the places where:
   [a] the Products are exposed to sea winds or corrosive gases, including Cl2, H2S, NH3, SO2, and NO2
   [b] the temperature or humidity exceeds those recommended by ROHM
   [c] the Products are exposed to direct sunshine or condensation
   [d] the Products are exposed to high Electrostatic

2. Even under ROHM recommended storage condition, solderability of products out of recommended storage time period may be degraded. It is strongly recommended to confirm solderability before using Products of which storage time is exceeding the recommended storage time period.

3. Store / transport cartons in the correct direction, which is indicated on a carton with a symbol. Otherwise bent leads may occur due to excessive stress applied when dropping of a carton.

4. Use Products within the specified time after opening a humidity barrier bag. Baking is required before using Products of which storage time is exceeding the recommended storage time period.
