Sample board for USB DEVELOPPER KIT

- Sample boards supporting several pressure modules including:
 - MS45xx family (on request only)
 - MS5536
 - MS5540 / 5541
 - MS5561
 - MS5607 / 5611
 - MS5637
 - MS5803
 - MS5805
 - MS5806
- 2 connectors on board:
 - USB Demo kit interface connector
 - 16 pins header user interface connector

DESCRIPTION

The MS5xxx-BRD is a sample board family which may be plugged into the "MEAS USB DEVEL KEY" tool. It currently supports all our sensors family like the MS45xx, MS55xx, MS56xx and MS58xx. Communication protocols 3wires/SPI and I2c are available on dedicated sample boards. All Samples Boards have a USBDEVEL KEY connector and also a standard 2x8 pins connector for user applications.

GENERAL BOARD DESCRIPTION

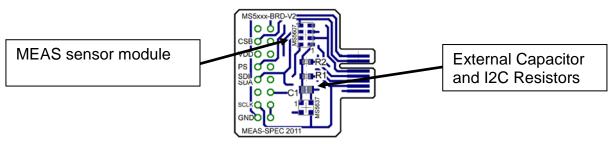

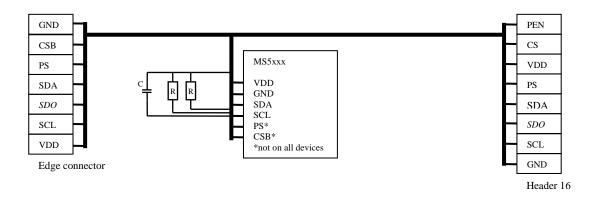

Figure 2 Bottom side view on Sample Board

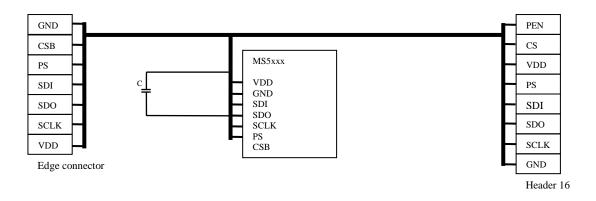

GENERAL BOARD SCHEMATIC DESCRIPTION

The "PCB for SAMPLES BOARDS" is done to be connected to the USB DEVEL KEY and also to a Header of 2x8 pin for customer use. We have SAMPLES BOARDS for all our products with dedicated communication bus.

RECOMMANDED OPERATION CONDITIONS

Please refer to the sensor datasheet for all information.

Note: The total error is calculated to sum the different accuracy:

Total error = "Absolute accuracy"+"Maximum error with supply voltage"+"Long-term stability"

HEADER 16 PINS INTERFACE PINOUT

The board also contains a complete 2.54 mm 2x8 PINOUT interface for signal monitoring or connection to a custom development board with a flat cable.

Pin Name	• Pin	• Type	• Function		
User interface					
PEN	2	I	Programming enable (1)		
PV/CS	4	I	Negative programming voltage (1) / Chip Select		
VDD	6	Р	Positive supply voltage 3 volts from USB module*		
MCLK/PS	8	I	Master clock (32.768 kHz) / Protocol select		
SDI	10	I	Serial data input		
SDO	12	0	Serial data output		
SCLK	14	I	Serial data clock		
GND	16	G	Ground		

NOTE

1) Pin 4 (PV) and PIN 2 (PEN) are only used by the manufacturer for MS55xx test and should not be connected.

Pin Name	• Pin	• Type	Function		
User interface	User interface				
GND	1	G	Ground		
NRESET	3	I	Do not connect		
MOSI	4	1/0	Do not connect		
MISO	7	1/0	Do not connect		
SCK	9	0	Do not connect		
VDD	11	Р	Positive supply voltage 3 volts from USB module*		
VDD	13	Р	Positive supply voltage 3 volts from USB module*		
VDD	15	Р	Positive supply voltage 3 volts from USB module*		

Table 3: 2.54 mm 2x8 connector PINOUT

(*) Only if USB DEVL KEY is connected

EDGE CONNECTOR PINOUT

The edge connector bottom side contains all the connections required for the different sensors using either the I2C, SPI or 3 wires protocol with the USB DEVEL KEY.

Pin Name	• Pin	• Type	Function		
User interface	User interface				
GND	2	G	Ground		
PV/CSB	4	N	Negative programming voltage (2) / Chip Select		
MCLK/PS	6	I	Master clock (32.768 kHz) / Protocol select		
DIN/SDI/SDA	8	I	Serial data input		
SDO/-/DOUT	10	0	Serial data output		
SCLK/SCL	12	I	Serial data clock		
VDD	14	Р	Positive supply voltage 3 volts from USB module		
Manufacturer reserved interface					
GND	1	G	Ground		
PEN	3	I	Programming enable (2)		
NRESET	5	I	Reset input active low for microcontroller		
MOSI	7	O/I	SPI output of microcontroller / external programming pin		
MISO	9	1/0	SPI Input of microcontroller / external programming pin		
SCK	11	0	SPI of microcontroller clock		
VDD	13	P	Positive supply voltage 3 volts from USB module		

Table 4: USB DEVEL KEY connector PINOUT

NOTE

2) Pin 3 (PV) and PIN 4 (PEN) are only used by the manufacturer for MS55xx test and should not be connected.

MOUNTING AND ASSEMBLY CONSIDERATIONS

SOLDERING

Please refer to the application note AN808 & AN809 available on our website for all soldering issues.

MOUNTING

The sensors can be placed with automatic Pick & Place equipment using vacuum nozzles. They will not be damaged by the vacuum. Due to the low stress assembly the sensor does not show pressure hysteresis effects. It is important to solder all contact pads.

CONNECTION TO PCB

The package outline of the module allows the use of a flexible PCB for interconnection. This can be important for applications in watches and other special devices.

SEALING WITH O-RINGS

In products like outdoor watches the electronics must be protected against direct water or humidity. For those products the metal ring provides the possibility to seal with an O-ring. The metal ring is made of special anticorrosive stainless steel with a polished surface. In addition to this the ring is filled with silicone gel covering the sensor and the bonding wires. The O-ring (or O-rings) shall be placed at the outer diameter of the metal cap. This method avoids mechanical stress because the sensor can move in vertical direction.

CLEANING

MEAS sensors have been manufactured under clean room conditions. It is therefore recommended to assemble the sensor under class 10'000 or better conditions. Should this not be possible, it is recommended to protect the sensor opening during assembly from entering particles and dust. To avoid cleaning of the PCB, solder paste of type "no-clean" shall be used. Cleaning might damage the sensor!

ESD PRECAUTIONS

The electrical contact pads are protected against ESD up to 2 kV HBM (human body model). It is therefore essential to ground machines and personnel properly during assembly and handling of the device. MEAS Sensors are shipped in antistatic transport boxes. Any test adapters or production transport boxes used during the assembly of the sensor shall be of an equivalent antistatic material.

DECOUPLING CAPACITOR

Particular care must be taken when connecting the device to the power supply. A 100nF ceramic capacitor or a 47µF ceramic capacitor for the MS55xx series is implemented on the PCB. This capacitor will stabilize the power supply during data conversion and thus, provide the highest possible accuracy.

PULL-UP RESISTORS

Two pull up resistors are implemented on the PCB compatible with I2c bus. These resistors don't affect the use with the SPI bus.

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию.

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России, а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научноисследовательскими институтами России.

С нами вы становитесь еще успешнее!
