

# LUXEON H50-2

High Voltage LED

## Introduction

The LUXEON® H50-2 delivers superior efficacy, color performance and reliability in a high voltage architecture that minimizes driver requirements making it an ideal solution for space constrained and cost sensitive retrofit bulbs and luminaires. With exceptional color stability over temperature and current, LUXEON H50-2 simplifies design while providing superior quality of light.

This document contains the performance data and technical information needed to design and develop LUXEON H50-2 based solutions.

### Features and Benefits

- Enables design of small socket and cost sensitive luminaires with simple, efficient and small size driver
- Is binned at 85°C and 40 mA with 3 and 5 SDCM color binning. 50V 2 watt LED flexibly supports 110V and 220V solutions.
- Exceeds ENERGY STAR® lumen maintenance requirements
- Delivers real-world in application performance and reliability.

### Key Applications

- Lamps
- Specialty Lighting

# General Information

## Product Nomenclature

LUXEON H50-2 is tested and binned at 40 mA, with current pulse duration of 20 ms. All characteristic charts where the thermal pad is kept at constant temperature (85°C typically) are measured with current pulse duration of 20 ms. Under these conditions, junction temperature and thermal pad temperature are the same.

The part number designation is explained as follows:

L X A C - A B C D

Where:

A — I for current design of H50-2

B — 8 for 80 CRI

C, D — 27 for 2700K, 30 for 3000K

Therefore 80 CRI products tested and binned at 2700K will have the part numbering scheme:

L X A C - I 8 2 7

## Average Lumen Maintenance Characteristics

Lumen maintenance for solid state lighting devices (LEDs) is typically defined in terms of the percentage of initial light output remaining after a specified period of time. Philips Lumileds projects that LUXEON H50-2 products will deliver, on average, 70% lumen maintenance ( $L_{70}$ )  $\geq$  36,000 hours at a drive current of 40 mA. This projection is based on constant current operation with the  $T_s$  temperature maintained  $\leq$  105°C. This performance is based on independent test data, extrapolation according to IESNA TM-21-11 of Philips Lumileds historical data from tests run on similar material systems, and internal LUXEON reliability testing. Observation of design limits included in this data sheet is required in order to achieve this projected lumen maintenance.

## Environmental Compliance

Philips Lumileds is committed to providing environmentally friendly products to the solid-state lighting market. LUXEON H50-2 is compliant to the European Union directives on the restriction of hazardous substances in electronic equipment, namely the RoHS and REACH directives. Philips Lumileds will not intentionally add the following restricted material to the LUXEON H50-2: lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE).

# Product Selection

## Product Selection for LUXEON H50-2

Thermal Pad Temperature = 85°C, Test Current = 40 mA

**Table 1.**

Nominal CCT	Part Number	Minimum CRI	Minimum Luminous Flux (lm)	Typical Luminous Flux (lm)	Typical Efficacy (lm/W)
2700K	LXAC-1827	80	150	165	83
2700K	LXAC-1927	90	110	140	70
3000K	LXAC-1830	80	160	175	88
4000K	LXAC-1840	80	170	200	100
5000K	LXAC-1850	80	175	205	103
6500K	LXAC-1765	70	190	220	110

Note for Table 1:

I. Philips Lumileds maintains a tolerance of  $\pm 6.5\%$  on luminous flux and  $\pm 2$  on CRI measurements.

## Optical Characteristics

### Optical Characteristics for LUXEON H50-2

Thermal Pad Temperature = 85°C, Test Current = 40 mA

**Table 2.**

Nominal CCT	Minimum CRI	Color Temperature CCT			Typ Total Included Angle <sup>[1]</sup> (degrees) $\theta_{0.90V}$	Typ Viewing Angle <sup>[2]</sup> (degrees) $2\theta_{1/2}$
		Minimum	Typical	Maximum		
2700K	80	2580K	2725K	2870K	135	110
2700K	90	2649K	2773K	2850K	135	110
3000K	80	2870K	3045K	3220K	135	110
4000K	80	3598K	4051K	4176K	135	110
5000K	80	4462K	4985K	5181K	135	110
6500K	70	4856K	6322K	7170K	135	110

Notes for Table 2:

I. Total angle at which 90% of total luminous flux is captured.

2. Viewing angle is the off axis angle from lamp centerline where the luminous intensity is  $\frac{1}{2}$  of the peak value.

# Electrical Characteristics

## Electrical Characteristics for LUXEON H50-2

Thermal Pad Temperature = 85°C, Test Current = 40 mA

Table 3.

Nominal CCT	Forward Voltage $V_f$ <sup>[1]</sup> (V)			Typ. Temperature Coefficient of Forward Voltage <sup>[2]</sup> (mV/°C) $\Delta V_f / \Delta T_j$	Typical Thermal Resistance Junction to Thermal Pad (°C/W) $R\theta_{j-c}$
	Minimum	Typical	Maximum		
2700K, 3000K 4000K, 5000K, 6500K	48.5	50.0	52.0	-30.0	3

Notes for Table 3:

1. Philips Lumileds maintains a tolerance of  $\pm 0.5\%$  on forward voltage measurements.
2. Measured between  $25^\circ\text{C} \leq T_j \leq 125^\circ\text{C}$  at  $I_f = 40 \text{ mA}$ .

## Absolute Maximum Ratings

**Table 4.**

Parameter	Maximum Performance
DC Forward Current (mA)	45
RMS Forward Current (mA) <sup>[2]</sup>	45
Peak Current (mA) <sup>[2]</sup>	65
ESD Sensitivity	< 1000V Human Body Model (HBM) Class 2 JESD22-A114-B < 400V Machine Model (MM) Class 2 JESD22-A115-B
LED Junction Temperature <sup>[1]</sup>	125°C
Operating Case Temperature at 40 mA	-40°C - 118°C
Storage Temperature	-40°C - 135°C
Soldering Temperature	JEDEC 020c 260°C
Allowable Reflow Cycles	3
Autoclave Conditions	121°C at 2 ATM 100% Relative Humidity for 96 Hours Maximum
Reverse Voltage (Vr)	LUXEON H LEDs are not designed to be driven in reverse bias

**Notes for Table 4:**

1. Proper current derating must be observed to maintain junction temperature below the maximum.
2. For AC operation with a minimum of 50Hz.

## JEDEC Moisture Sensitivity

**Table 5.**

Level			Soak Requirements	
	Floor Life		Standard	
	Time	Conditions	Time	Conditions
I	unlimited	≤ 30°C / 85% RH	168 Hrs. + 5 / -0 Hrs.	85°C / 85% RH

# Reflow Soldering Characteristics

**Temperature Profile for Table 6.**

**Table 6.**

Profile Feature	Lead Free Assembly
Average Ramp-Up Rate ( $T_{s_{\max}}$ to $T_p$ )	3°C / second max
Preheat Temperature Min ( $T_{s_{\min}}$ )	150°C
Preheat Temperature Max ( $T_{s_{\max}}$ )	200°C
Preheat Time ( $t_{s_{\min}}$ to $t_{s_{\max}}$ )	60 - 180 seconds
Time Maintained Above Temperature $T_L$	217°C
Time Maintained Above Time ( $t_L$ )	60 - 150 seconds
Peak / Classification Temperature ( $T_p$ )	260°C
Time Within 5°C of Actual Peak Temperature ( $t_p$ )	20 - 40 seconds
Ramp-Down Rate	6°C / second max
Time 25°C to Peak Temperature	8 minutes max

**Note for Table 6:**

I. All temperatures refer to the application Printed Circuit Board (PCB), measured on the surface adjacent to the package body.

## Mechanical Dimensions

**Figure 2.**

### Notes for Figure 2:

1. Do not handle the device by the lens. Excessive force on the lens may damage the lens itself or the interior of the device.
2. Drawings not to scale.
3. All dimensions are in millimeters.
4. The thermal pad is electrically isolated from the anode and cathode contact pads.

# Solder Pad Design

**Figure 3. Solder pad layout.**

## Notes for Figure 3:

1. The photograph shows the recommended LUXEON H50-2 layout on Printed Circuit Board (PCB).
2. For more information on assembly and layout, please refer to Technical Note 106 (TN106).
3. The .dwg files are available at [www.philipslumileds.com](http://www.philipslumileds.com) and [www.philipslumileds.cn.com](http://www.philipslumileds.cn.com).

# Product Binning and Labeling

## Purpose of Product Binning

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical data sheets. For this reason, Philips Lumileds bins the LED components for luminous flux, color and forward voltage ( $V_f$ ).

## Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical data sheets. For this reason, Philips Lumileds bins the LED components for luminous flux, color and forward voltage ( $V_f$ ).

Reels of 2700K, 3000K emitters are labeled with a four digit alphanumeric CAT code following the format below.

ABCD

A = Flux bin (C, D, etc.)

B and C = Color bin (73, 7A, 7B etc.)

D =  $V_f$  bin (E, F, G, etc.)

## Luminous Flux Bins

Table 7 lists the standard photometric luminous flux bins for LUXEON H50-2 emitters (tested and binned at 40 mA and  $T_j = 85^\circ\text{C}$ ). Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all colors.

**Table 7. Flux Bins - All Colors**

Bin Code	Minimum Photometric Flux (lm)	Maximum Photometric Flux (lm)
B	110	120
C	120	130
D	130	140
E	140	150
F	150	160
G	160	170
H	170	180
J	180	190
K	190	200
L	200	210
M	210	220
N	220	230
P	230	240
Q	240	250

## Forward Voltage Bins

Table 8 lists minimum and maximum  $V_f$  bin values per emitter. Although several bins are outlined, product availability in a particular bin varies by production run and by product performance.

**Table 8.  $V_f$  Bins**

Bin Code	Minimum Forward Voltage (V)	Maximum Forward Voltage (V)
E	48.5	49
F	49	49.5
G	49.5	50
H	50	50.5
J	50.5	51
K	51	51.5
L	51.5	52

# Color Bin Structure

Note for Tables 9 & 10:

I. Philips Lumileds maintains a tester tolerance of  $\pm 0.005$  on x, y color coordinates.

## Company Information

Philips Lumileds is a leading provider of LEDs for everyday lighting applications. The company's records for light output, efficacy and thermal management are direct results of the ongoing commitment to advancing solid-state lighting technology and enabling lighting solutions that are more environmentally friendly, help reduce CO<sub>2</sub> emissions and reduce the need for power plant expansion. Philips Lumileds LUXEON® LEDs are enabling never before possible applications in outdoor lighting, shop lighting, home lighting, digital imaging, display and automotive lighting.

Philips Lumileds is a fully integrated supplier, producing core LED material in all three base colors, (Red, Green, Blue) and white. Philips Lumileds has R&D centers in San Jose, California and in the Netherlands, and production capabilities in San Jose, Singapore and Penang, Malaysia. Founded in 1999, Philips Lumileds is the high flux LED technology leader and is dedicated to bridging the gap between solid-state technology and the lighting world. More information about the company's LUXEON LED products and solid-state lighting technologies can be found at [www.philipslumileds.com](http://www.philipslumileds.com).

**Стандарт  
Электрон  
Связь**

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
