3.0 V to 5.5 V, ±12 kV IEC ESD Protected, 500 kbps/50 Mbps RS-485 Transceivers

Data Sheet **ADM3061E/ADM3062E/ADM3063E/ADM3064E/ADM3065E/ADM3066E/ADM3067E/ADM3068E**

FEATURES

- TIA/EIA RS-485 compliant over full supply range
- 3.0 V to 5.5 V operating voltage range on V_{CC}
- 1.62 V to 5.5 V V_{IO} logic supply option available
- ESD protection on the bus pins
  - IEC 61000-4-2 ≥ ±12 kV contact discharge
  - IEC 61000-4-2 ≥ ±12 kV air discharge
  - HBM ≥ ±30 kV
- Full hot swap support (glitch free power-up/power-down)
- High speed 50 Mbps data rate (ADM3065E/ADM3066E/ ADM3067E/ADM3068E)
- Low speed 500 kbps data rate for long cables (ADM3061E/ ADM3062E/ADM3063E/ADM3064E)
- Full receiver short-circuit, open circuit, and bus idle fail-safe
- Extended temperature range up to 125°C
- PROFIBUS compliant at V_{CC} ≥ 4.5 V
- Half duplex and full duplex models available
- Allows connection of up to 128 transceivers onto the bus
- Space-saving package options
  - 10-lead, 3 mm × 3 mm LFCSP
  - 8-lead and 10-lead, 3 mm × 3 mm MSOP
  - 8-lead and 14-lead, narrow body SOIC

APPLICATIONS

- Industrial fieldbuses
- Process control
- Building automation
- PROFIBUS networks
- Motor control servo drives and encoders

Changes to Figure 43 and Figure 44 ... 19
Changes to Ordering Guide ... 26

6/2019—Rev. E to Rev. F

Added ADM3068E ... Universal
Added Figure 2; Renumbered Sequentially ... 1
Changes to Features Section and Figure 4 ... 1
Changes to Table 1 Title ... 5
Changes to Table 2 ... 5
Changes to ADM3061E/ADM3062E/ADM3062E Section and Table 3 ... 7
Changes to ADM3065E/ADM3066E/ADM3067E/ADM3068E Section and Table 4 ... 8
Changes to Figure 5 and Figure 7 ... 9
Changes to Figure 8 ... 10
Added Endnote 1 to Digital Input and Output Voltage (DE, $\overline{RE}$, DI, and RO) Parameter, Table 5 ... 11
Changes to Digital Input and Output Voltage (DE, $\overline{RE}$, DI, and RO) Parameter, Table 5 ... 11
Changes to Table 8 ... 13
Added Figure 14 and Table 10; Renumbered Sequentially ... 15
Changes to Figure 19 Caption ... 16
Changes to Figure 43 and Figure 44 ... 20
Changes to Isolated High Speed RS-485 Node Section ... 24
Changes to Ordering Guide ... 27

4/2019—Rev. D to Rev. E

Added ADM3063E ... Universal
Change to Features Section ... 1
Changes to Figure 3 ... 1
Changes to Table 1 ... 4
Changes to Table 2 ... 5
Added Endnote 1, Table 2; Renumbered Sequentially ... 5
Change to Table 7 ... 11
Changes to Table 8 ... 12
Changes to Figure 12 and Table 9 ... 13
Changes to Figure 14, Figure 15, Figure 16, and Figure 18 Captions ... 14
Changes to Figure 19, Figure 20, Figure 23, and Figure 24 Captions ... 15
Change to Figure 25 Caption ... 14
Changes to Figure 39 ... 18
Changes to IEC ESD Protected RS-485 Section ... 19
Changes to Truth Tables Section, Table 11, Table 12, and Receiver Fail-Safe Section ... 20
Added Table 10; Renumbered Sequentially ... 20
Changes to Isolated High Speed RS-485 Node Section and Figure 47 ... 22
Changes to Ordering Guide ... 25

3/2019—Rev. C to Rev. D

Added ADM3067E and 14-Lead SOIC_N, R-14 ... Universal
Changes to Feature Section ... 1
Added Figure 3; Renumbered Sequentially ... 1
Moved Table 1 to ... 4
Changes to Table 2 ... 5

1/2018—Rev. B to Rev. C

12/2017—Rev. A to Rev. B

5/2017—Rev. 0 to Rev. A

3/2017—Revision 0: Initial Version

GENERAL DESCRIPTION

The ADM3061E/ADM3062E/ADM3063E/ADM3064E/ADM3065E/ADM3066E/ADM3067E/ADM3068E are 3.0 V to 5.5 V, IEC electrostatic discharge (ESD) protected RS-485 transceivers, allowing the devices to withstand ±12 kV contact discharges on the transceiver bus pins without latch-up or damage. The ADM3062E/ADM3064E/ADM3066E/ADM3068E feature a V_{IO} logic supply pin that allows a flexible digital interface capable of operating as low as 1.62 V.

The ADM3065E/ADM3066E/ADM3067E/ADM3068E are suitable for high speed, 50 Mbps, bidirectional data communication on multipoint bus transmission lines. The ADM3061E/ADM3062E/ADM3063E/ADM3064E/ADM3065E/ADM3066E/ADM3067E/ADM3068E feature a 1/4 unit load input impedance that allows up to 128 transceivers on a bus. The ADM3061E/ADM3062E/ADM3063E/ADM3064E models offer all of the same features as the ADM3065E/ADM3066E/ADM3067E/ADM3068E models at a low 500 kbps data rate that is suitable for operation over long cable runs.

The ADM3061E/ADM3062E/ADM3065E/ADM3066E are half-duplex RS-485 transceivers, fully compliant to the PROFIBUS® standard with increased 2.1 V bus differential voltage at $V_{CC} \geq$ 4.5 V. The ADM3063E/ADM3064E/ADM3067E/ADM3068E are full duplex RS-485 transceiver options.

The RS-485 transceivers are available in a number of space-saving packages, including the 10-lead, 3 mm × 3 mm lead frame chip-scale package (LFCSP), the 8-lead or 10-lead, 3 mm × 3 mm mini small outline package (MSOP), and the 8-lead or 14-lead, narrow body standard small outline packages (SOIC_N). Models with operating temperature ranges of −40°C to +125°C and −40°C to +85°C are available.

Excessive power dissipation caused by bus contention or by output shorting is prevented by a thermal shutdown circuit. If a significant temperature increase is detected in the internal driver circuitry during fault conditions, this feature forces the driver output into a high impedance state.

The ADM3061E/ADM3062E/ADM3063E/ADM3064E/ADM3065E/ADM3066E/ADM3067E/ADM3068E guarantee a logic high receiver output when the receiver inputs are shorted, open, or connected to a terminated transmission line with all drivers disabled.

Table 2 presents an overview of the ADM3061E/ADM3062E/ADM3063E/ADM3064E/ADM3065E/ADM3066E/ADM3067E/ADM3068E data rate capability across temperature, power supply, and package options. Refer to the Ordering Guide section for model numbering.

Table 1. Generic Description Table

Device No.	Duplex	Maximum Data Rate	V_{IO} Logic Supply Available	Temperature Range	Packages Available
ADM3061E	Half	500 kbps[1]	No	A grade: −40°C to +85°C B grade: −40°C to +125°C	8-lead SOIC_N, 8-lead MSOP
ADM3062E	Half	500 kbps[1]	Yes		10-lead MSOP, 10-lead LFCSP
ADM3063E	Full	500 kbps[1]	No		14-lead SOIC_N
ADM3064E	Full	500 kbps[1]	Yes		14-lead SOIC_N
ADM3065E	Half	50 Mbps	No		8-lead SOIC_N, 8-lead MSOP
ADM3066E	Half	50 Mbps	Yes		10-lead MSOP, 10-lead LFCSP
ADM3067E	Full	50 Mbps	No		14-lead SOIC_N
ADM3068E	Full	50 Mbps	Yes		14-lead SOIC_N

[1] Driver outputs are slew rate limited to minimize common-mode emissions over long cable runs.

Table 2. Summary of the ADM3061E/ADM3062E/ADM3063E/ADM3064E/ADM3065E/ADM3066E/ADM3067E/ADM3068E Operating Conditions—Data Rate Capability Across Temperature, Power Supply, and Package

Maximum Data Rate[1]	Maximum V_{CC} (V)	Maximum Temperature	Package Description
50 Mbps	5.5	−40°C to +125°C	10-lead LFCSP
50 Mbps	5.5	−40°C to +105°C	8-lead SOIC_N, 8-lead MSOP, 10-lead MSOP, and 14-lead SOIC_N
50 Mbps	3.6	−40°C to +125°C	8-lead SOIC_N, 8-lead MSOP, 10-lead MSOP, and 14-lead SOIC_N
500 kbps	5.5	−40°C to +125°C	8-lead SOIC_N, 8-lead MSOP, 10-lead MSOP, 10-lead LFCSP, and 14-lead SOIC_N

[1] The ADM3065E/ADM3066E/ADM3067E/ADM3068E data input (DI) transmits 50 Mbps (or 500 kbps for the ADM3061E/ADM3062E/ADM3063E/ADM3064E) clock data, and the ADM3061E/ADM3062E/ADM3063E/ADM3064E/ADM3065E/ADM3066E/ADM3067E/ADM3068E driver enable (DE) is enabled for 50% of the DI transmit time.

SPECIFICATIONS

V_{CC} = 3.0 V to 5.5 V, V_{IO} = 1.62 V to V_{CC} (ADM3062E/ADM3064E/ADM3066E/ADM3068E), T_A = T_{MIN} (−40°C) to T_{MAX} (+125°C), unless otherwise noted. All typical specifications are at T_A = 25°C, V_{IO} = V_{CC} = 3.3 V, unless otherwise noted.

Table 3.

Parameter	Symbol	Min	Typ	Max	Unit	Test Conditions/Comments
POWER SUPPLY						
No Load Supply Current	I_{CC}		3.5	7.5	mA	DE = V_{IO}[1], $\overline{RE}$ = 0 V
			3.5	7.5	mA	DE = V_{IO}, $\overline{RE}$ = V_{IO}
			3	4.5	mA	DE = 0 V, $\overline{RE}$ = 0 V
ADM3065E/ADM3066E/ADM3067E/ ADM3068E Supply Current, Data Rate = 50 Mbps	I_{CC}		107	172	mA	Load resistance (R_L) = 54 Ω, DE = V_{IO}, $\overline{RE}$ = 0 V (V_{CC} ≥ 4.5 V)
			67	75	mA	R_L = 54 Ω, DE = V_{IO}, $\overline{RE}$ = 0 V (V_{CC} = 3.0 V)
ADM3061E/ADM3062E/ADM3063E/ ADM3064E Supply Current, Data Rate = 500 kbps	I_{CC}		100	165	mA	R_L = 54 Ω, DE = V_{IO}, $\overline{RE}$ = 0 V (V_{CC} ≥ 4.5 V)
			56	74	mA	R_L = 54 Ω, DE = V_{IO}, $\overline{RE}$ = 0 V (V_{CC} = 3.0 V)
Supply Current in Shutdown Mode	I_{SHDN}		210	450	µA	DE = 0 V, $\overline{RE}$ = V_{IO}
V_{IO} Shutdown Current[2]	I_{IOSHDN}		1	50	µA	DE = 0 V, $\overline{RE}$ = V_{IO}

RECEIVER						
Maximum Data Rate		500			kbps	
Propagation Delay	t_{RPLH}, t_{RPHL}			200	ns	C_L = 15 pF, $\|V_{ID}\| \geq$ 1.5 V, V_{CM} = 1.5 V, see Figure 7 and Figure 42
Skew/Pulse Width Distortion	t_{RSKEW}			50	ns	C_L = 15 pF, $\|V_{ID}\| \geq$ 1.5 V, V_{CM} = 1.5 V, see Figure 7 and Figure 42
Enable to Output High	t_{RZH}		10	50	ns	R_L = 1 kΩ, C_L = 15 pF, $\|V_{ID}\| \geq$ 1.5 V, DE high, see Figure 8 and Figure 44
Enable to Output Low	t_{RZL}		10	50	ns	R_L = 1 kΩ, C_L = 15 pF, $\|V_{ID}\| \geq$ 1.5 V, DE high, see Figure 8 and Figure 44
Disable Time from Low	t_{RLZ}		10	50	ns	R_L = 1 kΩ, C_L = 15 pF, $\|V_{ID}\| \geq$ 1.5 V, see Figure 8 and Figure 44
Disable Time from High	t_{RHZ}		10	50	ns	R_L = 1 kΩ, C_L = 15 pF, $\|V_{ID}\| \geq$ 1.5 V, see Figure 8 and Figure 44
Enable from Shutdown to High	$t_{RZH(SHDN)}$[3]			2000	ns	R_L = 1 kΩ, C_L = 15 pF, $\|V_{ID}\| \geq$ 1.5 V, see Figure 8 and Figure 43
Enable from Shutdown to Low	$t_{RZL(SHDN)}$[3]			2000	ns	R_L = 1 kΩ, C_L = 15 pF, $\|V_{ID}\| \geq$ 1.5 V, see Figure 8 and Figure 43
TIME TO SHUTDOWN	t_{SHDN}[4]	40			ns	

[1] Maximum data rate assumes a ratio of t_{DR}:t_{BIT}:t_{DF} equal to 1:0.5:1.
[2] $t_{DZH(SHDN)}$ and $t_{DZL(SHDN)}$ refer to the time for the device to enable when $\overline{DE}$ changes from 0 V to V_{CC}. $\overline{RE}$ = V_{CC} for this condition.
[3] $t_{RZH(SHDN)}$ and $t_{RZL(SHDN)}$ refer to the time for the device to enable when $\overline{RE}$ changes from V_{CC} to 0 V. DE = 0 V for this condition.
[4] Minimum time required to put the device into shutdown: DE and $\overline{RE}$ must be disabled for more than 40 ns for the device to go into shutdown.

ADM3065E/ADM3066E/ADM3067E/ADM3068E

V_{CC} = 3.0 V to 5.5 V, V_{IO} = 1.62 V to V_{CC} (ADM3066E/ADM3068E), $T_A = T_{MIN}$ (−40°C) to T_{MAX} (+125°C), unless otherwise noted. All typical specifications are at T_A = 25°C, $V_{IO} = V_{CC}$ = 3.3 V, unless otherwise noted.

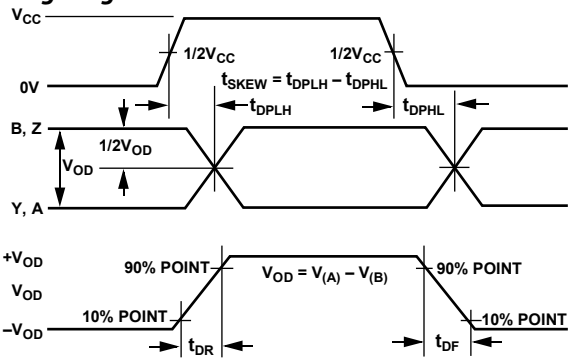
Disable Time from Low	t_{RLZ}		10	35	ns	R_L = 1 kΩ, C_L = 15 pF, $\|V_{ID}\| \geq$ 1.5 V, see Figure 8 and Figure 44
Disable Time from High	t_{RHZ}		10	35	ns	R_L = 1 kΩ, C_L = 15 pF, $\|V_{ID}\| \geq$ 1.5 V, see Figure 8 and Figure 44
Enable from Shutdown to High	$t_{RZH(SHDN)}$[3]		450	2000	ns	R_L = 1 kΩ, C_L = 15 pF, $\|V_{ID}\| \geq$ 1.5 V, see Figure 8 and Figure 43
Enable from Shutdown to Low	$t_{RZL(SHDN)}$[3]		450	2000	ns	R_L = 1 kΩ, C_L = 15 pF, $\|V_{ID}\| \geq$ 1.5 V, see Figure 8 and Figure 43
TIME TO SHUTDOWN	t_{SHDN}[4]	40			ns	

[1] Maximum data rate assumes a ratio of t_{DR}:t_{BIT}:t_{DF} equal to 1:1:1.
[2] $t_{DZH(SHDN)}$ and $t_{DZL(SHDN)}$ refer to the time for the device to enable when $\overline{DE}$ changes from 0 V to V_{CC}. $\overline{RE} = V_{CC}$ for this condition.
[3] $t_{RZH(SHDN)}$ and $t_{RZL(SHDN)}$ refer to the time for the device to enable when $\overline{RE}$ changes from V_{CC} to 0 V. DE = 0 V for this condition.
[4] Minimum time required to put the device into shutdown: DE and $\overline{RE}$ must be disabled for more than 40 ns for the device to go into shutdown.

Timing Diagrams



NOTES
1. V_{OD} IS THE DIFFERENCE BETWEEN A AND B, WITH $+V_{OD}$ BEING THE MAXIMUM POINT OF V_{OD}, AND $-V_{OD}$ BEING THE MINIMUM POINT OF V_{OD}.
2. $V_{CC} = V_{IO}$ FOR ADM3062E/ADM3064E/ADM3066E/ADM3068E.

10 Positive and 10 Negative Discharges	≥±12 kV
Three Positive or Three Negative Discharges	±15 kV
ESD Human Body Model (HBM)	
On the Bus Pins (A, B, Y, Z)	≥±30 kV
All Other Pins	±8 kV

[1] V_{IO} = V_{CC} on the ADM3061E/ADM3063E/ADM3065E/ADM3067E.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

THERMAL RESISTANCE

Thermal performance is directly linked to printed circuit board (PCB) design and operating environment. Careful attention to PCB thermal design is required.

θ_{JA} is the natural convection junction to ambient thermal resistance measured in a one cubic foot sealed enclosure.

θ_{JC} is the junction to case thermal resistance.

Table 7. Thermal Resistance

Package Type	θ_{JA}[1]	θ_{JC}[1]	Unit
R-8	110.88	58.63	°C/W
RM-8	165.69	49.61	°C/W
RM-10	165.69	49.61	°C/W
R-14	104.5	42.90	°C/W
CP-10-9	55.65	33.22	°C/W

[1] Thermal impedance simulated values are based on JEDEC 2S2P thermal test board with no bias. See JEDEC JESD-51.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

PIN CONFIGURATIONS AND FUNCTION DESCRIPTIONS

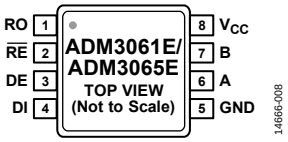

Figure 10. ADM3061E/ADM3065E 8-Lead MSOP Pin Configuration

Table 8. ADM3061E/ADM3065E Pin Function Descriptions

Pin No.	Mnemonic	Description
1	RO	Receiver Output Data. This output is high when (A − B) ≥ −30 mV and low when (A − B) ≤ −200 mV. This output is tristated when the receiver is disabled, that is, when $\overline{RE}$ is driven high.
2	$\overline{RE}$	Receiver Enable Input. This is an active low input. Driving this input low enables the receiver and driving it high disables the receiver.
3	DE	Driver Enable. A high level on this pin enables the driver differential outputs, A and B. A low level places the driver output into a high impedance state.
4	DI	Transmit Data Input. Data to be transmitted by the driver is applied to this input.
5	GND	Ground.
6	A	Noninverting Driver Output and Receiver Input. When the driver is disabled, or when V_{CC} is powered down, Pin A is put into a high impedance state to avoid overloading the bus.
7	B	Inverting Driver Output and Receiver Input. When the driver is disabled, or when V_{CC} is powered down, Pin B is put into a high impedance state to avoid overloading the bus.
8	V_{CC}	3.0 V to 5.5 V Power Supply. Adding a 0.1 µF decoupling capacitor between the V_{CC} pin and the GND pin is recommended.

THEORY OF OPERATION

IEC ESD PROTECTED RS-485

The ADM3061E/ADM3062E/ADM3063E/ADM3064E/ADM3065E/ADM3066E/ADM3067E/ADM3068E are 3.0 V to 5.5 V, 50 Mbps RS-485 transceivers with IEC 61000-4-2 Level 4 ESD protection on the bus pins. These devices can withstand up to ±12 kV contact discharge on transceiver bus pins (A, B, Y, and Z) without latch-up or damage. The ADM3061E/ADM3062E/ADM3063E/ADM3064E have the same robust IEC 61000-4-2 ESD protection as the ADM3065E/ADM3066E/ADM3067E/ADM3068E models, and operate at a lower, 500 kbps data rate.

HIGH DRIVER DIFFERENTIAL OUTPUT VOLTAGE

The ADM3061E/ADM3062E/ADM3063E/ADM3064E/ADM3065E/ADM3066E/ADM3067E/ADM3068E have characteristics that are optimized for use in PROFIBUS applications. When powered at $V_{CC} \geq 4.5$ V, the ADM3061E/ADM3062E/ADM3063E/ADM3064E/ADM3065E/ADM3066E/ADM3067E/ADM3068E driver output differential voltage meets or exceeds the PROFIBUS requirements of 2.1 V with a 54 Ω load.

IEC 61000-4-2 ESD PROTECTION

ESD is the sudden transfer of electrostatic charge between bodies at different potentials either caused by near contact or induced by an electric field. It has the characteristics of high current in a short time period. The primary purpose of the IEC 61000-4-2 test is to determine the immunity of systems to external ESD events outside the system during operation. IEC 61000-4-2 describes testing using two coupling methods: contact discharge and air discharge. Contact discharge implies a direct contact between the discharge gun and the equipment under test (EUT). During air discharge testing, the charged electrode of the discharge gun is moved toward the EUT until a discharge occurs as an arc across the air gap. The discharge gun does not make direct contact with the EUT. A number of factors affect the results and repeatability of the air discharge test, including humidity, temperature, barometric pressure, distance, and rate of approach to the EUT. This method is a more accurate representation of an actual ESD event but is not as repeatable. Therefore, contact discharge is the preferred test method.

During testing, the data port is subjected to at least 10 positive and 10 negative single discharges. Selection of the test voltage is dependent on the system end environment.

Figure 45 shows the 8 kV contact discharge current waveform as described in the IEC 61000-4-2 specification. Some of the key waveform parameters are rise times of less than 1 ns and pulse widths of approximately 60 ns.

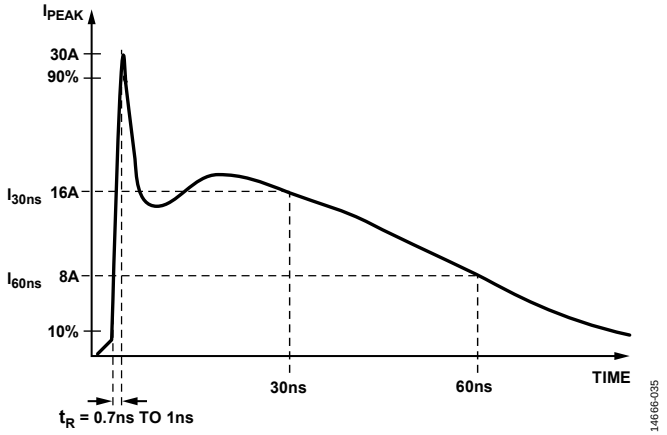

Figure 45. IEC 61000-4-2 ESD Waveform (8 kV)

Figure 46 shows the 8 kV contact discharge current waveform from the IEC 61000-4-2 standard compared to the HBM ESD 8 kV waveform. Figure 46 shows that the two standards specify a different waveform shape and peak current. The peak current associated with an IEC 61000-4-2 8 kV pulse is 30 A, whereas the corresponding peak current for HBM ESD is more than five times less at 5.33 A. The other difference is the rise time of the initial voltage spike, with the IEC 61000-4-2 ESD waveform having a much faster rise time of 1 ns, compared to the 10 ns associated with the HBM ESD waveform. The amount of power associated with an IEC ESD waveform is much greater than that of an HBM ESD waveform. The HBM ESD standard requires the EUT to be subjected to three positive and three negative discharges, whereas the IEC ESD standard requires 10 positive and 10 negative discharge tests.

The ADM3061E/ADM3062E/ADM3063E/ADM3064E/ADM3065E/ADM3066E/ADM3067E/ADM3068E with IEC 61000-4-2 ESD ratings is better suited for operation in harsh environments compared to other RS-485 transceivers that state varying levels of HBM ESD protection.

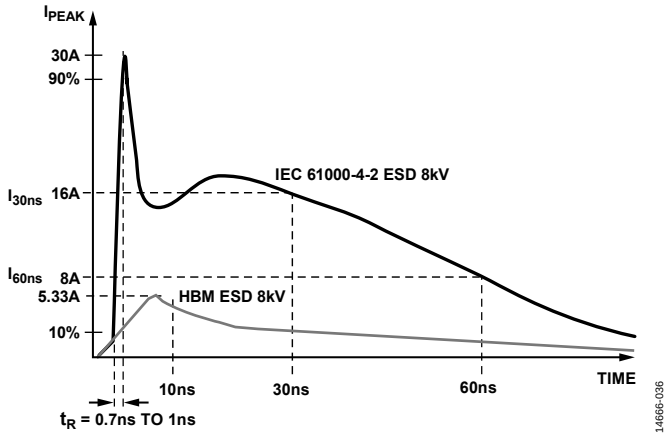

Figure 46. IEC 61000-4-2 ESD Waveform (8 kV) Compared to HBM ESD Waveform (8 kV)

TRUTH TABLES

Table 13 and Table 14 use the abbreviations shown in Table 12.

Table 12. Truth Table Abbreviations

Letter	Description
H	High level
I	Indeterminate
L	Low level
X	Any state
Z	High impedance (off)

Table 13. Transmitting Truth Table

Supply Status		Inputs			Outputs	
V_{IO}[1]	V_{CC}	$\overline{RE}$	DE	DI	A/Y	B/Z
On	On	X	H	H	H	L
On	On	X	H	L	L	H
On	On	X	L	X	Z	Z
Off	On	X	X	X	I	I
On	Off	X	X	X	Z	Z
Off	Off	X	X	X	Z	Z

[1] The V_{IO} pin is not applicable for the ADM3061E/ADM3063E/ADM3065E/ADM3067E

Table 14. Receiving Truth Table

Supply Status		Inputs			Outputs
V_{IO}[1]	V_{CC}	A – B	$\overline{RE}$	DE	RO
On	On	>−0.03 V	L	X	H
On	On	<−0.2 V	L	X	L
On	On	−0.2 V ≤ A – B ≤ −0.03 V	L	X	I

Off	On	X	L	X	I
Off	Off	X	X	X	I

[1] The V_{IO} pin is not applicable for the ADM3061E/ADM3063E/ADM3065E/ADM3067E.

RECEIVER FAIL-SAFE

The ADM3061E/ADM3062E/ADM3063E/ADM3064E/ADM3065E/ADM3066E/ADM3067E/ADM3068E guarantee a logic high receiver output when the receiver inputs are shorted, open, or connected to a terminated transmission line with all drivers disabled. This receiver output is achieved by setting the receiver input threshold between −30 mV and −200 mV. If the differential receiver input voltage (A − B) is greater than or equal to −30 mV, the RO pin is logic high.

If the (A − B) input is less than or equal to −200 mV, the RO pin is logic low. In the case of a shorted, open circuit or terminated bus with all transmitters disabled, the receiver differential input voltage is pulled to 0 V, resulting in a logic high with a 30 mV minimum noise margin.

HOT SWAP CAPABILITY

When a circuit board is inserted into a powered (or hot) backplane, differential disturbances to the data bus can lead to data errors. During this period, processor logic output drivers are high impedance and are unable to drive the DE and $\overline{RE}$ inputs of the RS-485 transceivers to a defined logic level. Leakage currents up to ±10 µA from the high impedance state of the processor logic drivers can cause standard complementary metal-oxide semiconductor (CMOS) enable inputs of a transceiver to drift to an incorrect logic level. Additionally, parasitic circuit board capacitance can cause coupling of V_{CC} or GND to the enable inputs. Without the hot swap capability, these factors can improperly enable the driver or receiver of the transceiver. When V_{CC} or V_{IO} rises, an internal pull-down circuit holds DE low and $\overline{RE}$ high. After the initial power-up sequence, the pull-down circuit becomes transparent, resetting the hot swap tolerable input.

128 TRANSCEIVERS ON THE BUS

The standard RS-485 receiver input impedance is 12 kΩ (one unit load), and the standard driver can drive up to 32 unit loads. The ADM3061E/ADM3062E/ADM3063E/ADM3064E/ADM3065E/ADM3066E/ADM3067E/ADM3068E transceivers have a 1/4 unit load receiver input impedance (48 kΩ), allowing up to 128 transceivers to be connected in parallel on one communication line. Any combination of these devices and other RS-485 transceivers with a total of 32 unit loads or fewer can be connected to the line.

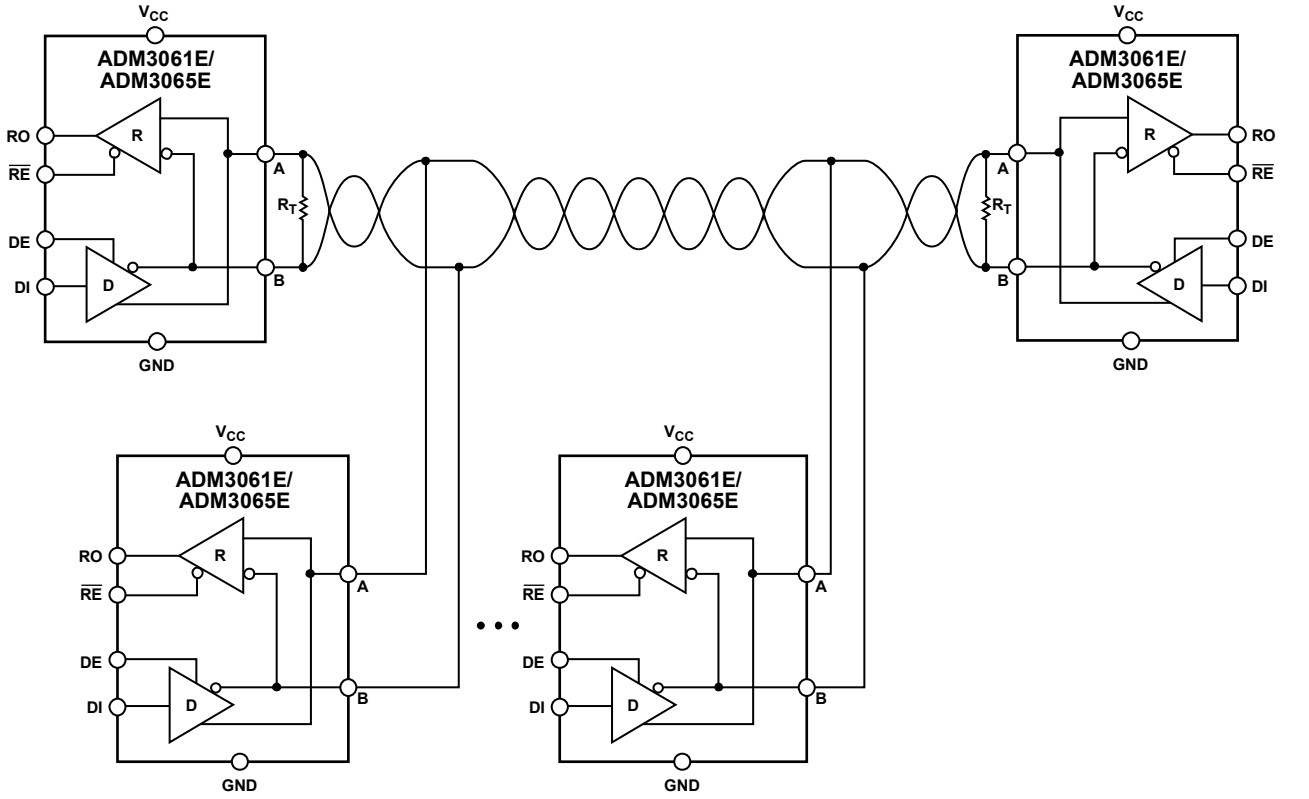
DRIVER OUTPUT PROTECTION

The ADM3061E/ADM3062E/ADM3063E/ADM3064E/ADM3065E/ADM3066E/ADM3067E/ADM3068E feature two methods to prevent excessive output current and power dissipation caused by faults or by bus contention. Current-limit protection on the output stage provides immediate protection against short circuits over the whole common-mode voltage range. In addition, a thermal shutdown circuit forces the driver outputs into a high impedance state if the die temperature rises excessively. This circuitry is designed to disable the driver outputs when a die temperature of 150°C is reached. As the device cools, the drivers are reenabled at a temperature of 140°C.

APPLICATIONS INFORMATION

The ADM3061E/ADM3065E transceiver is designed for bidirectional data communications on multipoint bus transmission lines. Figure 47 shows a typical network applications circuit.

To minimize reflections, terminate the line at both ends with a termination resistor (the value of the termination resistor must be equal to the characteristic impedance of the cable used) and keep stub lengths off the main line as short as possible.



NOTES
1. THE MAXIMUM NUMBER OF NODES IS 128.
2. R_T IS EQUAL TO THE CHARACTERISTIC IMPEDANCE OF THE CABLE USED.

Figure 47. ADM3061E/ADM3065E Typical Half-Duplex RS-485 Communications Network

ISOLATED HIGH SPEED RS-485 NODE

Galvanic isolation, with reinforced insulation and 5 kV rms transient withstand voltage, can be added to the ADM3065E using Analog Devices, Inc., *i*Coupler® and *iso*Power® technology. The ADuM6401 provides the required quad channels of 5 kV rms signal isolation, operating at rates up to 25 Mbps, together with an integrated dc-to-dc converter. The ADuM6401 combines with the ADM3065E (shown in Figure 48) with the V_{ISO} pin configured for 3.3 V by connecting the V_{SEL} pin to GND_{ISO} and a 5 V supply connected to V_{DD1}. Operation at 3.3 V ensures the ADM3065E remains within the load capability of ADuM6401 even at 25 Mbps.

The dc-to-dc converter in the ADuM6401 *iso*Power device provides regulated, isolated power to the ADM3065E (and the ADuM241D). These *iso*Power devices use high frequency switching elements to transfer power through the transformers. Take care during PCB layout to meet emissions standards. See the AN-0971 Application Note for PCB layout recommendations.

Galvanic isolation of the ADM3065E at the full data rate, up to 50 Mbps, can be implemented using the ADuM241D quad-channel digital isolator and the ADuM6028 isolated dc-to-dc converter, as shown in Figure 49. The ADuM6028 is an 8-pin device that contains a 300 mW dc-to-dc converter optimized to meet emissions standards on a 2-layer PCB using two ferrite beads. The ADuM241D operates at a data rate up to 150 Mbps, and offers the precise timing required to fully support the ADM3065E at 50 Mbps.

[1] Z = RoHS Compliant Part.

Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
