Description

FSA4476 is a high performance USB Type-C port multimedia switch which supports analog audio headsets. FSA4476 allows the sharing of a common USB Type-C port to pass USB2.0 signal, analog audio, sideband use wires and analog microphone signal. FSA4476 also supports high voltage on CC port, SBU port and USB port on USB Type-C receptacle side. In addition, FSA4476 supports USB Type-C dead battery application and dual power supply with VBAT rail and VBUS rail.

Application Information

Dead Battery

FSA4476 supports dead battery application. When power is not applied to FSA4476 and it is attached to a Source device, then the Source would pull up the CC line connected through the cable. FSA4476 in response would turn on the pull-down that will bring the CC voltage to a range that the Source can detect an attach event and turn on VBUS.

Headset detection

FSA4476 integrates headset unplug detection function by detecting the CC_x_H voltage. The headset detection is only active during audio switch on status(EN1=1). When headset is attached(both CC1_H and CC2_H are Low), the flag signal is sent low to host controller by INT1 (INT1= low). Once either of CC_x_H= High (CC_x_H>1.5V), INT1 will be released to high by external pull up resistor.
