

5-V Low-Drop Fixed Voltage Regulator

ILE4270G

Functional Description

This device is a 5-V low-drop fixed-voltage regulator. The maximum input voltage is 42 V (65 V, ≤ 400 ms). Up to an input voltage of 26 V and for an output current up to 550 mA it regulates the output voltage within a 2 % accuracy. The short circuit protection limits the output current of more than 650 mA.

The device incorporates over voltage protection and temperature protection that disables the circuit at unpermissibly high temperatures.

Features

- Output voltage tolerance $\leq \pm 2$ %
- Low-drop voltage
- Integrated overtemperature protection
- Reverse polarity protection
- Input voltage up to 42 V
- Overvoltage protection up to 65 V (≤ 400 ms)
- Short-circuit proof
- Suitable for use in automotive electronics
- Wide temperature range
- Adjustable reset time

$T_A = -40^\circ \div 125^\circ \text{ C}$ for all packages.

Application Description

The IC regulates an input voltage in the range of $5.5 \text{ V} < V_i < 36 \text{ V}$ to $V_{Qnom} = 5.0 \text{ V}$. Up to 26 V it produces a regulated output current of more than 550 mA. Above 26 V the save-operating-area protection allows operation up to 36 V with a regulated output current of more than 300 mA. Overvoltage protection limits operation at 42 V. The overvoltage protection hysteresis restores operation if the input voltage has dropped below 36 V. A reset signal is generated for an output voltage of $V_Q < 4.5 \text{ V}$. The delay for power-on reset can be set externally with a capacitor.

Design Notes for External Components

An input capacitor C_I is necessary for compensation of line influences. The resonant circuit consisting of lead inductance and input capacitance can be damped by a resistor of approx. 1Ω in series with C_I . An output capacitor C_Q is necessary for the stability of the regulating circuit. Stability is guaranteed at values of $C_Q \geq 22 \mu\text{F}$ and an ESR of $< 3 \Omega$.

Pin Definitions and Functions

Pin	Symbol	Function
1	I	Input : block to ground directly on the IC with ceramic capacitor
2	RO	Reset Output : the open collector output is connected to the 5 V output via an integrated resistor of 30 k Ω .
3	GND	Ground : internally connected to heatsink.
4	D	Reset Delay : connect a capacitor to ground for delay time adjustment.
5	Q	5-V Output : block to ground with 22 μ F capacitor, ESR < 3 Ω .

Circuit Description

The control amplifier compares a reference voltage, which is kept highly accurate by resistance adjustment, to a voltage that is proportional to the output voltage and drives the base of a series transistor via a buffer. Saturation control as a function of the load current prevents any over-saturation of the power element. If the output voltage decreases below 4.5 V, an external capacitor C_D on pin 4 (D) will be discharged by the reset generator. If the voltage on this capacitor drops below V_{DRL} , a reset signal is generated on pin 2 (RO), i.e. reset output is set low. If the output voltage rises above 4.5 V, C_D will be charged with constant current. After the power-on-reset time the voltage on the capacitor reaches V_{DU} and the reset output will be set high again. The value of the power-on-reset time can be set within a wide range depending of the capacitance of C_D .

The IC also incorporates a number of internal circuits for protection against:

- Overload
- Overvoltage
- Overtemperature
- Reverse polarity

Optimum reliability and life time are guaranteed if the junction temperature does not exceed $125\text{ }^{\circ}\text{C}$ in operating mode. Operation at up to the maximum junction temperature of $150\text{ }^{\circ}\text{C}$ is possible in principle.

* Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
