Functional Diagram

General Description

The HMC7229LS6 is a four-stage GaAs pHEMT MMIC 1 Watt Power Amplifier which operates between 37 and 40 GHz. The HMC7229LS6 provides 24 dB of gain, +32 dBm of saturated output power, and 18% PAE from a +6V supply. With an excellent OIP3 of +40 dBm, the HMC7229LS6 is ideal for high linearity applications in military and space as well as point-to-point and point-to-multi-point radios. The RF I/Os are internally matched and DC blocked for ease of integration into higher level assemblies. The HMC7229LS6 is housed in a ceramic air cavity package which exhibits low thermal resistance and is compatible with surface mount manufacturing techniques.

4, 8	N/C	These pins are not connected internally; however, all data shown herein was measured with these pins connected to RF/DC ground externally.	
5, 7, 13, 15	GND	These pins and the exposed ground paddle must be connected to RF/DC ground.	
6	RF IN	This pin is AC coupled and matched to 50 Ohms.	
16	Vref	DC voltage of diode biased through external resistor used for temperature compensation of Vdet. See application circuit.	
12	Vdet	DC voltage representing RF output power rectified by diode which is biased through an external resistor. See application circuit.	
14	RF OUT	This pin is AC coupled and matched to 50 Ohms.

[2] Circuit Board Material: Rogers 4350 or Arlon 25FR

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
