

Bluetooth[®] low energy wireless network processor

Datasheet - production data

Features

- Bluetooth specification v4.1 compliant master and slave single-mode Bluetooth low energy network processor
- Embedded Bluetooth low energy protocol stack: GAP, GATT, SM, L2CAP, LL, RF-PHY
- Bluetooth low energy profiles provided separately
- Operating supply voltage: from 1.7 to 3.6 V
- 8.2 mA maximum TX current (@0 dBm, 3.0 V)
- Down to 1.7 μ A current consumption with active BLE stack
- Integrated linear regulator and DC-DC step-down converter
- Up to +8 dBm available output power (at antenna connector)
- Excellent RF link budget (up to 96 dB)
- Accurate RSSI to allow power control
- Proprietary application controller interface (ACI), SPI based, allows interfacing with an external host application microcontroller

- Full link controller and host security
- High performance, ultra-low power Cortex-M0 32-bit based architecture core
- On-chip non-volatile Flash memory
- AES security co-processor
- Low power modes
- 16 or 32 MHz crystal oscillator
- 12 MHz ring oscillator
- 32 kHz crystal oscillator
- 32 kHz ring oscillator
- Battery voltage monitor
- Compliant with the following radio frequency regulations: ETSI EN 300 328, EN 300 440, FCC CFR47 Part 15, ARIB STD-T66
- Available in QFN32 (5 x 5 mm) and WLCSP34 (2.66 x 2.56 mm) packages
- Operating temperature range: -40 °C to 85 °C

Applications

- Watches
- Fitness, wellness and sports
- Consumer medical
- Security/proximity
- Remote control
- Home and industrial automation
- Assisted living
- Mobile phone peripherals
- PC peripherals

1 Description

The BlueNRG-MS is a very low power Bluetooth low energy (BLE) single-mode network processor, compliant with Bluetooth specification v4.1. The BlueNRG-MS supports multiple roles simultaneously, and can act at the same time as Bluetooth Smart sensor and hub device.

The entire Bluetooth low energy stack runs on the embedded Cortex M0 core. The non-volatile Flash memory allows on-field stack upgrading. The BlueNRG-MS allows applications to meet of the tight advisable peak current requirements imposed with the use of standard coin cell batteries. The maximum peak current is only 10 mA at 1 dBm of output power. Ultra low-power sleep modes and very short transition times between operating modes allow very low average current consumption, resulting in longer battery life. The BlueNRG-MS offers the option of interfacing with external microcontrollers using SPI transport layer.

2 General description

The BlueNRG-MS is a single-mode Bluetooth low energy master/slave network processor, compliant with the Bluetooth specification v4.1.

It integrates a 2.4 GHz RF transceiver and a powerful Cortex-M0 microcontroller, on which a complete power-optimized stack for Bluetooth single mode protocol runs, providing:

- Master, slave role support
- GAP: central, peripheral, observer or broadcaster roles
- ATT/GATT: client and server
- SM: privacy, authentication and authorization
- L2CAP
- Link Layer: AES-128 encryption and decryption

An on-chip non-volatile Flash memory allows on-field Bluetooth low energy stack upgrade.

In addition, according the Bluetooth specification v4.1 the BlueNRG-MS can support the following features through firmware updates:

- Multiple roles simultaneously support
- Support simultaneous advertising and scanning
- Support being Slave of up to two Masters simultaneously
- Privacy V1.1
- Low Duty Cycle Directed Advertising
- L2CAP Connection Oriented Channels

The device allows applications to meet of the tight advisable peak current requirements imposed with the use of standard coin cell batteries. If the high efficiency embedded DC-DC step-down converter is used, the maximum input current is only 15 mA at the highest output power (+8 dBm). Even if the DC-DC converter is not used, the maximum input current is only 29 mA at the highest output power, still preserving battery life.

Ultra low-power sleep modes and very short transition time between operating modes result in very low average current consumption during real operating conditions, providing very long battery life.

Two different external matching networks are suggested: standard mode (TX output power up to +5 dBm) and high power mode (TX output power up to +8 dBm).

The external host application processor, where the application resides, is interfaced with the BlueNRG-MS through an application controller interface protocol which is based on a standard SPI interface.

5 Block diagram and descriptions

A block diagram of the BlueNRG-MS is shown in *Figure 9*. In the following subsections a short description of each module is given.

Figure 9. BlueNRG-MS block diagram

5.1 Core, memory and peripherals

The BlueNRG-MS contains an ARM Cortex-M0 microcontroller core that supports ultra-low leakage state retention mode and almost instantaneously returning to fully active mode on critical events.

The memory subsystem consists of 64 KB Flash, and 12 KB RAM , divided in two blocks of 6 KB (RAM1 and RAM2). Flash is used for the M0 program. No RAM or FLASH resources are available to the external microcontroller driving the BlueNRG-MS.

The application controller interface (ACI) uses a standard SPI slave interface as transport layer, basing in five physical wires:

- 2 control wires (clock and slave select)
- 2 data wires with serial shift-out (MOSI and MISO) in full duplex
- 1 wire to indicate data availability from the slave

Table 4. SPI interface

Name	Direction	Width	Description
SPI_CS	In	1	SPI slave select = SPI enable.
SPI_CLK	In	1	SPI clock (max 8 MHz).

Table 4. SPI interface (continued)

Name	Direction	Width	Description
SPI_MOSI	In	1	Master output, slave input.
SPI_MISO	Out	1	Master input, slave output.
SPI_IRQ	Out	1	Slave has data for master.

All the SPI pins have an internal pull-down except for the CSN that has a pull-up. All the SPI pins, except the CSN, are in high impedance state during the low-power states. The IRQ pin needs a pull-down external resistor.

The device embeds a battery level detector to monitor the supply voltage. The characteristics of the battery level detector are defined in [Table 19](#).

5.2 Power management

The BlueNRG-MS integrates both a low dropout voltage regulator (LDO) and a step-down DC-DC converter, and one of them can be used to power the internal BlueNRG-MS circuitry. However even when the LDO is used, the stringent maximum current requirements, which are advisable when coin cell batteries are used, can be met and further improvements can be obtained with the DC-DC converter at the sole additional cost of an inductor and a capacitor.

The internal LDOs supplying both the 1.8 V digital blocks and 1.2 V digital blocks require decoupling capacitors for stable operation. When the VBAT voltage is below 1.8 V, the LDO 1.8 V output follows the VBAT value.

[Figure 10](#) and [Figure 11](#), show the simplified power management schemes using LDO and DC-DC converter.

Figure 10. Power management strategy using LDO

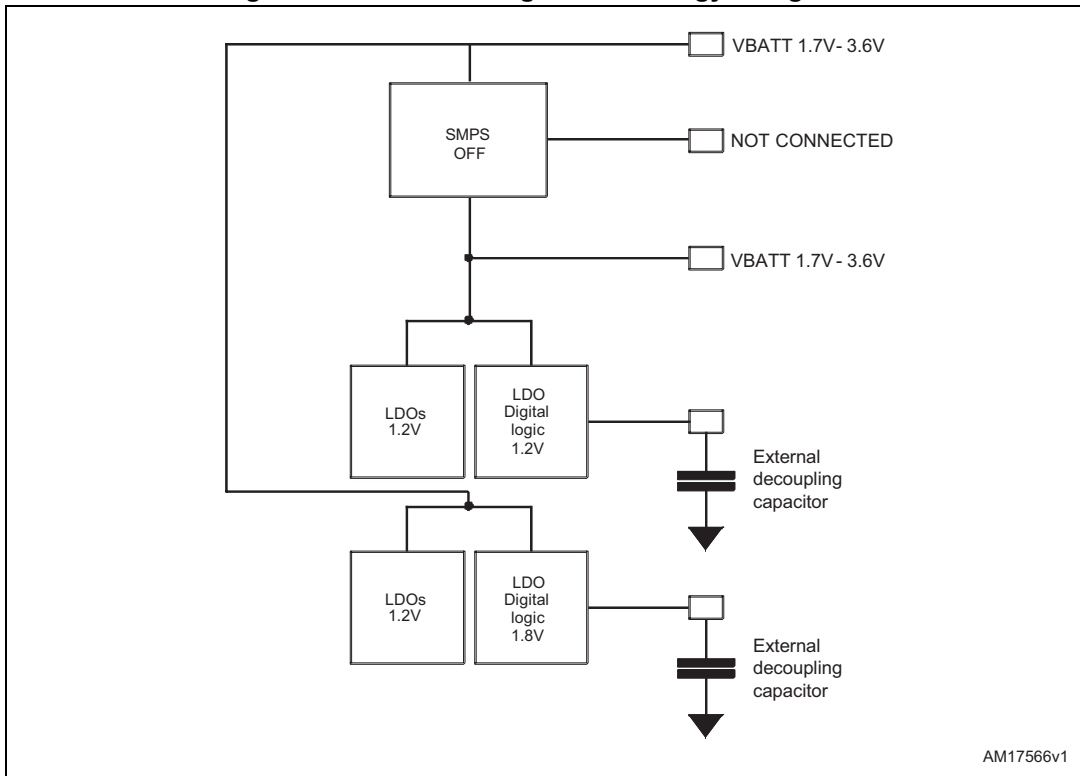

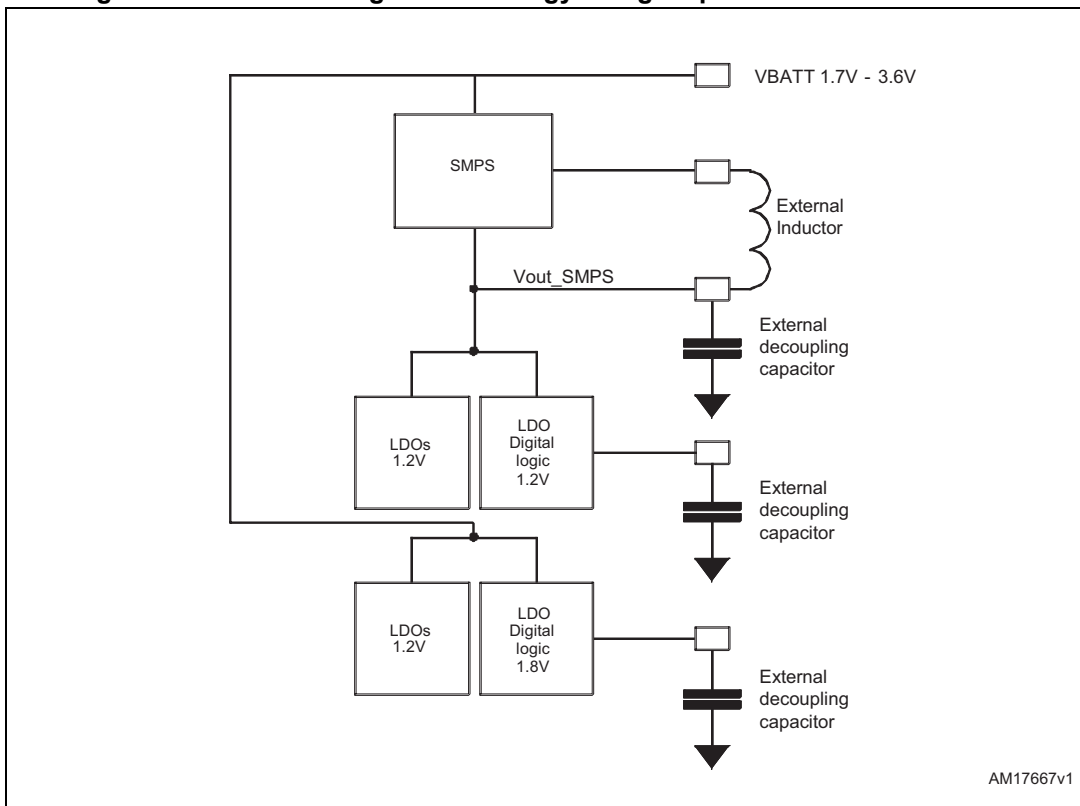

Figure 11. Power management strategy using step-down DC-DC converter

5.3 Clock management

The BlueNRG-MS integrates two low-speed frequency oscillators (LSOSC) and two High speed (16 MHz or 32 MHz) frequency oscillators (HSOSC).

The low frequency clock is used in Low Power mode and can be supplied either by a 32.7 kHz oscillator that uses an external crystal and guarantee up to ± 50 ppm frequency tolerance, or by a ring oscillator with maximum ± 500 ppm frequency tolerance, which does not require any external components.

The primary high frequency clock is a 16 MHz or 32 MHz crystal oscillator. There is also a fast-starting 12 MHz ring oscillator that provides the clock while the crystal oscillator is starting up. Frequency tolerance of high speed crystal oscillator is ± 50 ppm.

The usage of the 16 MHz (or 32 MHz) crystal is strictly necessary.

5.4 Bluetooth low energy radio

The BlueNRG-MS integrates a RF transceiver compliant to the Bluetooth specification and to the standard national regulations in the unlicensed 2.4 GHz ISM band.

The RF transceiver requires very few external discrete components. It provides 96 dB link budgets with excellent link reliability, keeping the maximum peak current below 15 mA.

In Transmit mode, the power amplifier (PA) drives the signal generated by the frequency synthesizer out to the antenna terminal through a very simple external network. The power delivered as well as the harmonic content depends on the external impedance seen by the PA.

The output power is programmable from -18 dBm to +8 dBm, to allow a user-defined power control system and to guarantee optimum power consumption for each scenario.

6 Operating modes

Several operating modes are defined for the BlueNRG-MS:

- Reset mode
- Sleep mode
- Standby mode
- Active mode
- Radio mode
 - Receive Radio mode
 - Transmit Radio mode

In Reset mode, the BlueNRG-MS is in ultra-low power consumption: all voltage regulators, clocks and the RF interface are not powered. The BlueNRG-MS enters Reset mode by asserting the external reset signal. As soon as it is de-asserted, the device follows the normal activation sequence to transit to Active mode.

In Sleep mode either the low speed crystal oscillator or the low speed ring oscillator are running, whereas the high speed oscillators are powered down as well as the RF interface. The state of the BlueNRG-MS is retained and the content of the RAM is preserved. Depending on the application, part of the RAM (RAM2 block) can be switched off during sleep to save more power (refer to stack mode 1, described in UM1868).

While in Sleep mode, the BlueNRG-MS waits until an internal timer expires and then it goes into Active mode. The transition from Sleep mode to Active mode can also be activated through the SPI interface.

Standby mode and Sleep mode are equivalent but the low speed frequency oscillators are powered down. In Standby mode the BlueNRG-MS can be activated through the SPI interface.

In Active mode the BlueNRG-MS is fully operational: all interfaces, including SPI and RF, are active as well as all internal power supplies together with the high speed frequency oscillator. The MCU core is also running.

Radio mode differs from Active mode as also the RF transceiver is active and it is capable of either transmitting or receiving.

Figure 12 reports the simplified state machine:

Figure 12. Simplified state machine

AM17668v1

Table 5. BlueNRG-MS operating modes

State	Digital LDO	SPI	LSOSC	HSOSC	Core	RF synt.	RX chain	TX chain
Reset	OFF Register contents lost	OFF	OFF	OFF	OFF	OFF	OFF	OFF

	6.2 ms	32 kHz RO
	93 ms	32 kHz XO
Sleep-active ⁽¹⁾	0.42 ms	
Active-RX	125 μ s	Channel change
	61 μ s	No channel change
Active-TX	131 μ s	Channel change
	67 μ s	No channel change
RX-TX or TX-RX	150 μ s	

1. These measurements are taken using NX3225SA-16.000 MHz-EXS00A-CS05997.

7 Application controller interface

The application controller interface is based on a standard SPI module with speeds up to 8 MHz. The application controller Interface defines a software protocol providing functions to access all the services offered by the layers of the embedded Bluetooth stack. The ACI commands are described in the BlueNRG-MS ACI command interface document.

8 Absolute maximum ratings and thermal data

Table 7. Absolute maximum ratings

Pin	Parameter	Value	Unit
5, 19, 24, 26, 28	DC-DC converter supply voltage input and output	-0.3 to +3.9	V
12, 29	DC voltage on linear voltage regulator	-0.3 to +3.9	V

		V _{BAT} range: TC2	1.6	3.0	5.0	
IOH	High level output current @VOH (min)	V _{BAT} range: TC	5.5	10.6	17.6	mA
		V _{BAT} range: TC1	3.7	7.2	12.0	
		V _{BAT} range: TC2	1.4	3.0	5.6	

10.2 RF general characteristics

Characteristics measured over recommended operating conditions unless otherwise specified. Typical value are referred to T_A = 25 °C, V_{BAT} =3.0 V. All performance data are referred to a 50 Ω antenna connector, via reference design, QFN32 package version.

Table 11. RF general characteristics

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
FREQ	Frequency range		2400		2483.5	MHz
F _{CH}	Channel spacing			2		MHz
RF _{ch}	RF channel center frequency		2402		2480	MHz

10.3 RF transmitter characteristics

Characteristics measured over recommended operating conditions unless otherwise specified. Typical value are referred to $T_A = 25\text{ }^\circ\text{C}$, $V_{BAT} = 3.0\text{ V}$. All performance data are referred to a $50\text{ }\Omega$ antenna connector, via reference design, QFN32 package version.

Table 12. RF Transmitter characteristics

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
MOD	Modulation scheme		GFSK			
BT	Bandwidth-bit period product			0.5		
M_{index}	Modulation index		0.45	0.5	0.55	
DR	Air data rate			1		Mbps
ST_{acc}	Symbol time accuracy				50	ppm
P_{MAX}	Maximum Output Power High Power Standard mode	At antenna connector		+8 +5	+10 +7	dBm
P_{RFC}	Minimum Output Power High Power Standard mode			-15 -18		dB
P_{RFC}	RF power accuracy				± 2	dB
P_{BW1M}	6 dB Bandwidth for modulated carrier (1 Mbps)	Using resolution bandwidth of 100 kHz	500			kHz
P_{RF1}	1 st Adjacent channel transmit power 2 MHz	Using resolution bandwidth of 100 kHz and average detector			-20	dBm
P_{RF2}	2 nd Adjacent channel transmit Power >3MHz	Using resolution bandwidth of 100 kHz and average detector			-30	dBm
P_{SPUR}	Spurious emission	Harmonics included. Using resolution bandwidth of 1 MHz and average detector			-41	dBm
CF_{dev}	Center frequency deviation	During the packet and including both initial frequency offset and drift			± 150	kHz
$Freq_{drift}$	Frequency drift	During the packet			± 50	kHz
$IFreq_{drift}$	Initial carrier frequency drift				± 20	kHz
$DriftRate_{max}$	Maximum drift rate				400	Hz/ μ s
Z_{LOAD}	Optimum differential load	Standard mode @ 2440 MHz High Power mode @ 2440 MHz		25.9 + j44.4 25.4 + j20.8		Ω

10.4 RF receiver characteristics

Characteristics measured over recommended operating conditions unless otherwise specified. Typical value are referred to $T_A = 25\text{ }^\circ\text{C}$, $V_{BAT} = 3.0\text{ V}$. All performance data are referred to a $50\text{ }\Omega$ antenna connector, via reference design, QFN32 package version.

Table 13. RF receiver characteristics

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
RX _{SENS}	Sensitivity	BER <0.1%		-88		dBm
P _{SAT}	Saturation Standard mode	BER <0.1%	-	8		dBm
	High power mode			11		
Z _{IN}	Input differential impedance	Standard mode @ 2440 MHz High power mode @ 2440 MHz		31.4 - j26.6 28.8 - j18.5		Ω
RF selectivity with BLE equal modulation on interfering signal						
C/I _{CO-channel}	Co-channel interference	Wanted signal = -67 dBm, BER \leq 0.1%		9		dBc
C/I _{1 MHz}	Adjacent (+1 MHz) Interference	Wanted signal = -67 dBm, BER \leq 0.1%		2		dBc
C/I _{2 MHz}	Adjacent (+2 MHz) Interference	Wanted signal = -67 dBm, BER \leq 0.1%		-34		dBc
C/I _{3 MHz}	Adjacent (+3 MHz) Interference	Wanted signal = -67 dBm, BER \leq 0.1%		-40		dBc
C/I _{\geq4 MHz}	Adjacent (\geq ±4 MHz) Interference	Wanted signal = -67 dBm, BER \leq 0.1%		-34		dBc
C/I _{\geq6 MHz}	Adjacent (\geq ±6 MHz) Interference	Wanted signal = -67 dBm, BER \leq 0.1%		-45		dBc
C/I _{\geq25 MHz}	Adjacent (\geq ±25 MHz) Interference	Wanted signal = -67 dBm, BER \leq 0.1%		-64		dBc
C/I _{Image}	Image frequency Interference -2MHz	Wanted signal = -67 dBm, BER \leq 0.1%		-20		dBc
C/I _{Image\pm1 MHz}	Adjacent (\pm 1 MHz) Interference to in-band image frequency -1MHz -3MHz	Wanted signal = -67 dBm, BER \leq 0.1%		5 -25		dBc
Out of Band Blocking (Interfering signal CW)						
C/I _{Block}	Interfering signal frequency 30 MHz – 2000 MHz	Wanted signal = -67 dBm, BER \leq 0.1%, Measurement resolution 10 MHz			-30	dBm
C/I _{Block}	Interfering signal frequency 2003 MHz – 2399 MHz	Wanted signal = -67 dBm, BER \leq 0.1%, Measurement resolution 3 MHz			-35	dBm

Table 13. RF receiver characteristics (continued)

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
C/I_{Block}	Interfering signal frequency 2484 MHz – 2997 MHz	Wanted signal = -67 dBm, BER \leq 0.1%, measurement resolution 3 MHz	-		-35	dBm
C/I_{Block}	Interfering signal frequency 3000 MHz – 12.75 GHz	Wanted signal = -67 dBm, BER \leq 0.1%, measurement resolution 25 MHz			-30	dBm
Intermodulation characteristics (CW signal at f_1 , BLE interfering signal at f_2)						
$P_{\text{IM}(3)}$	Input power of IM interferes at 3 and 6 MHz distance from wanted signal	Wanted signal = -64 dBm, BER \leq 0.1%	-	-33		dBm
$P_{\text{IM}(-3)}$	Input power of IM interferes at -3 and -6 MHz distance from wanted signal	Wanted signal = -64 dBm, BER \leq 0.1%		-43		dBm
$P_{\text{IM}(4)}$	Input power of IM interferes at ± 4 and ± 8 MHz distance from wanted signal	Wanted signal = -64 dBm, BER \leq 0.1%		-33		dBm
$P_{\text{IM}(5)}$	Input power of IM interferes at ± 5 and ± 10 MHz distance from wanted signal	Wanted signal = -64 dBm, BER \leq 0.1%		-33		dBm

10.5 High speed crystal oscillator (HSXOSC) characteristics

Characteristics measured over recommended operating conditions unless otherwise specified. Typical value are referred to $T_A = 25^\circ\text{C}$, $V_{\text{BAT}} = 3.0\text{ V}$.

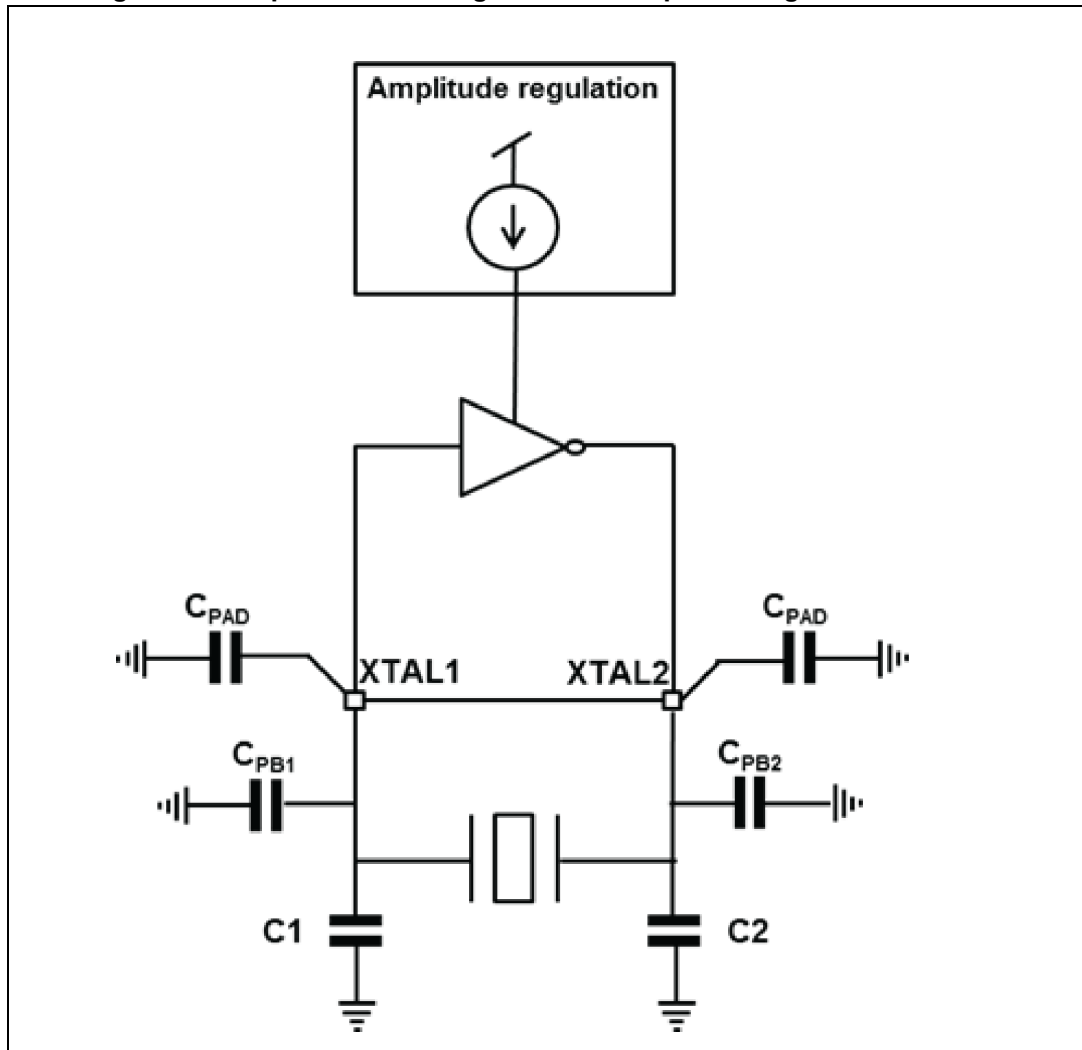

Table 14. High speed crystal oscillator characteristics

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
f_{NOM}	Nominal frequency			16/32		MHz
f_{TOL}	Frequency tolerance	Includes initial accuracy, stability over temperature, aging and frequency pulling due to incorrect load capacitance.			± 50	ppm
ESR	Equivalent series resistance				100	Ω
P_{D}	Drive level				100	μW

10.5.1 High speed crystal oscillator (HSXOSC)

The BlueNRG-MS includes a fully integrated, low power 16/32 MHz Xtal oscillator with an embedded amplitude regulation loop. In order to achieve low power operation and good frequency stability of the Xtal oscillator, certain considerations with respect to the quartz load capacitance C_0 need to be taken into account. [Figure 13](#) shows a simplified block diagram of the amplitude regulated oscillator used on the BlueNRG-MS.

Figure 13. Simplified block diagram of the amplitude regulated oscillator

Low power consumption and fast startup time is achieved by choosing a quartz crystal with a low load capacitance C_0 . To achieve good frequency stability, the following equation needs to be satisfied:

Equation 1

$$C_0 = \frac{C_1' * C_2'}{C_1' + C_2'}$$

Where $C_1' = C_1 + C_{PCB1} + C_{PAD}$, $C_2' = C_2 + C_{PCB2} + C_{PAD}$, where C_1 and C_2 are external (SMD) components, C_{PCB1} and C_{PCB2} are PCB routing parasites and C_{PAD} is the equivalent small-signal pad-capacitance. The value of C_{PAD} is around 0.5 pF for each pad. The routing parasites should be minimized by placing quartz and C_1/C_2 capacitors close to the chip, not only for an easier matching of the load capacitance C_0 , but also to ensure robustness against noise injection. Connect each capacitor of the Xtal oscillator to ground by a separate via.

10.6 Low speed crystal oscillator (LSXOSC) characteristics

Characteristics measured over recommended operating conditions unless otherwise specified. Typical value are referred to $T_A = 25\text{ }^\circ\text{C}$, $V_{BAT} = 3.0\text{ V}$.

Table 15. Low speed crystal oscillator characteristics

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
f_{NOM}	Nominal frequency			32.768		kHz
f_{TOL}	Frequency tolerance	Includes initial accuracy, stability over temperature, aging and frequency pulling due to incorrect load capacitance.			± 50	ppm
ESR	Equivalent series resistance				90	k Ω
P_D	Drive level				0.1	μW

Note: These values are the correct ones for NX3215SA-32.768 kHz-EXS00A-MU00003.

10.7 High speed ring oscillator (HSROSC) characteristics

Characteristics measured over recommended operating conditions unless otherwise specified. Typical value are referred to $T_A = 25\text{ }^\circ\text{C}$, $V_{BAT} = 3.0\text{ V}$, QFN32 package version.

Table 16. High speed ring oscillator characteristics

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
f_{NOM}	Nominal Frequency			12	16	MHz

10.8 Low speed ring oscillator (LSROSC) characteristics

Characteristics measured over recommended operating conditions unless otherwise specified. Typical value are referred to $T_A = 25\text{ }^\circ\text{C}$, $V_{BAT} = 3.0\text{ V}$, QFN32 package version.

Table 17. Low speed ring oscillator characteristics

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
32 kHz ring oscillator (LSROSC)						
f_{NOM}	Nominal frequency			37.4		kHz
f_{TOL}	Frequency tolerance				± 500	ppm

10.9 N-fractional frequency synthesizer characteristics

Characteristics measured over recommended operating conditions unless otherwise specified. Typical value are referred to $T_A = 25\text{ }^\circ\text{C}$, $V_{BAT} = 3.0\text{ V}$, $f_c = 2440\text{ MHz}$.

Table 18. N-fractional frequency synthesizer characteristics

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
PN _{SYNTH}	RF carrier phase noise	At $\pm 1\text{ MHz}$ offset from carrier		-113		dBc/Hz
		At $\pm 3\text{ MHz}$ offset from carrier		-119		dBc/Hz
LOCK _{TIME}	PLL lock time				40	μs
TO _{TIME}	PLL turn on / hop time	Including calibration			150	μs

10.10 Auxiliary blocks characteristics

Characteristics measured over recommended operating conditions unless otherwise specified. Typical value are referred to $T_A = 25\text{ }^\circ\text{C}$, $V_{BAT} = 3.0\text{ V}$, $f_c = 2440\text{ MHz}$. QFN32 package version.

Table 19. Auxiliary blocks characteristics

Symbol	Parameter	Test conditions	Min.	Typ.	Max.	Unit
Battery indicator and brown-out reset (BOR)⁽¹⁾						
V _{BLT1}	Battery level thresholds 1			2.7		V
V _{BLT2}	Battery level thresholds 2			2.5		V
V _{BLT3}	Battery level thresholds 3			2.3		V
V _{BLT4}	Battery level thresholds 4			2.1		V
A _{BLT}	Battery level thresholds accuracy				5	%
V _{ABOR}	Ascending brown-out threshold			1.79		V
V _{DBOR}	Descending brown-out threshold			1.73		V

1. BOR is disabled by default and it can be enabled by software.

11 Package mechanical data

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK[®] packages, depending on their level of environmental compliance. ECOPACK[®] specifications, grade definitions and product status are available at: www.st.com. ECOPACK[®] is an ST trademark.

Figure 14. QFN32 (5 x 5 x 1 pitch 0.5 mm) drawing

Table 20. QFN32 (5 x 5 x 1 pitch 0.5 mm) mechanical data

Dim.	mm		
	Min.	Typ.	Max.
A	0.80	0.85	1.00
A1	0	0.02	0.05
A3	0.20 REF		
b	0.25	0.25	0.30
D	5.00 BSC		
E	5.00 BSC		
D2	3.2		3.70
E2	3.2		3.70
e	0.5 BSC		
L	0.30	0.40	0.50
Φ	0°		14°
K	0.20		

Figure 15. QFN32 (5 x 5 x 1 pitch 0.5 mm) package detail "A"

Figure 16. WLCSP34 (2.66 x 2.56 x 0.5 pitch 0.4 mm) drawing

ADC8471362_C1

1. The corner of terminal A1 must be identified on the top surface by using a laser marking dot see [Figure 3](#).

Table 21. WLCSP34 (2.66 x 2.56 x 0.5 pitch 0.4 mm) mechanical data⁽¹⁾

Dim.	mm.			Notes
	Min.	Typ.	Max.	
A			0.50	
A1		0.20		
b		0.27		(2)
D	2.50	2.56	2.58	(3)
D1		2.00		
E	2.60	2.66	2.68	(4)
E1		2.00		
e		0.40		
f		0.28		
g		0.33		
ccc			0.05	

1. WLCSP stands for Wafer Level Chip Scale Package.
2. The typical ball diameter before mounting is 0.25 mm.
3. $D = f + D1 + f$.
4. $E = g + E1 + g$.

12 PCB assembly guidelines

For Flip Chip mounting on the PCB, STMicroelectronics recommends the use of a solder stencil aperture of 330 x 330 μm maximum and a typical stencil thickness of 125 μm. Flip Chips are fully compatible with the use of near eutectic 95.8% Sn, 3.5% Ag, 0.7% Cu solder paste with no-clean flux. ST's recommendations for Flip Chip board mounting are illustrated on the soldering reflow profile shown in [Figure 17](#).

Figure 17. Flip Chip CSP (2.66 x 2.56 x 0.5 pitch 0.4 mm) package reflow profile recommendation

Table 22. Flip Chip CSP (2.66 x 2.56 x 0.5 pitch 0.4 mm) package reflow profile recommendation

Profile	Value	
	Typ.	Max.
Temp. gradient in preheat (T = 70 – 180 °C)	0.9 °C/s	3 °C/s
Temp. gradient (T = 200 – 225 °C)	2 °C/s	3 °C/s
Peak temp. in reflow	240 - 245 °C	260 °C
Time above 220 °C	60 s	90 s
Temp. gradient in cooling	-2 to -3 °C/s	-6 °C/s
Time from 50 to 220 °C	160 to 220 s	

Dwell time in the soldering zone (with temperature higher than 220 °C) has to be kept as short as possible to prevent component and substrate damage. Peak temperature must not exceed 260 °C. Controlled atmosphere (N₂ or N₂H₂) is recommended during the whole reflow, especially above 150 °C.

Flip Chips are able to withstand three times the previous recommended reflow profile to be compatible with a double reflow when SMDs are mounted on both sides of the PCB plus one additional repair.

A maximum of three soldering reflows are allowed for these lead-free packages (with repair step included).

The use of a no-clean paste is highly recommended to avoid any cleaning operation. To prevent any bump cracks, ultrasonic cleaning methods are not recommended.

Стандарт Электрон Связь

Мы молодая и активно развивающаяся компания в области поставок электронных компонентов. Мы поставляем электронные компоненты отечественного и импортного производства напрямую от производителей и с крупнейших складов мира.

Благодаря сотрудничеству с мировыми поставщиками мы осуществляем комплексные и плановые поставки широчайшего спектра электронных компонентов.

Собственная эффективная логистика и склад в обеспечивает надежную поставку продукции в точно указанные сроки по всей России.

Мы осуществляем техническую поддержку нашим клиентам и предпродажную проверку качества продукции. На все поставляемые продукты мы предоставляем гарантию .

Осуществляем поставки продукции под контролем ВП МО РФ на предприятия военно-промышленного комплекса России , а также работаем в рамках 275 ФЗ с открытием отдельных счетов в уполномоченном банке. Система менеджмента качества компании соответствует требованиям ГОСТ ISO 9001.

Минимальные сроки поставки, гибкие цены, неограниченный ассортимент и индивидуальный подход к клиентам являются основой для выстраивания долгосрочного и эффективного сотрудничества с предприятиями радиоэлектронной промышленности, предприятиями ВПК и научно-исследовательскими институтами России.

С нами вы становитесь еще успешнее!
